FLIGHT SIMULATOR

\$49.95

Nearly 1.5 million copies of this classic, premium flight simulation program have been sold to date, and there's still nothing even close to it. Compatible with SubLOGIC Scenery Disks.

STEALTH MISSION

\$49.95

Winner of the 1988 CES "Best Strategy Game" Software Showcase Award. This advanced-technology strategic simulation is a stunning success, with sales challenging those of Flight Simulator. With nothing comparable on the market (despite similar titles), Stealth Mission's programming polish and strategic gaming excellence set new industry standards. Scenery Disk compatible.

JET

\$39.95

This award-winning jet fighter simulator defines the state of the art in action/combat simulation. Exciting and beautiful carrier-based sea missions complement multiple land-based combat scenarios. Jet's quick-reading documentation and easy flight controls provide unequalled action and fun. Scenery Disk compatible.

Special "Discover the World of SubLOGIC" promotional packaging:

- * Jet for the Commodore 64/128 now includes a FREE beautiful Japan Scenery Disk, a \$24.95 extra value!
- * Jet is also available without Japan Scenery Disk for the special low "discover SubLOGIC" price of \$29.95 through selected discount channels.

SCENERY DISKS

\$24.95 each. For use with all SubLOGIC flight simulation products.

WESTERN EUROPEAN TOUR

Our latest and hottest! Detailed scenery covering southern Great Britain, northern France, and southern West Germany. The basis of our fun "Find Red Square" promotion.

JAPAN SCENERY DISK

Detailed scenery from Tokyo to Osaka. Delightful international adventure!

SAN FRANCISCO

Concentrated scenery covering San Francisco and the Bay area. A consistently best-selling favorite!

SCENERY DISK # 7

Eastern Seaboard. Includes: Washington, Charlotte, Jacksonville, Miami. Another best-seller!

SCENERY DISK # 11

North-Eastern Border. Includes: Detroit, Lake Huron. Incredible variety, from industrial Detroit to beautiful Niagara Falls!

See your dealer, or write or call for more information. All products are available on disk for the Commodore 64/128 computers. For direct orders please indicate which product you want, and enclose the correct amount plus \$2.50 for shipping and handling (\$1.50 for each additional package). Please specify UPS or first class mail delivery. Visa, MasterCard, American Express, and Diners Club charges accepted.

NO QUARTER

Just Endless Arcade Action

Now you can take home some of the best Arcade games you've ever played,
to play on your own personal computer!

Skillful programming has taken the superb graphics and addictive game play of Arcade hits Double Dragon and Sidewinder and faithfully reproduced them in home computer versions.

Join in deadly combat with the savage street gang of the infamous Shadow Boss in Double Dragon. Indulge in an orgy of action and destruction in the high-energy shoot-em-up Sidewinder (part of the Awesome Arcade Action pack on Amiga and Atari ST). Go on the rampage and smash buildings and munch tiny natives in Aaargh!

Nothing but endless Arcade action – Arcadia has spared no quarter!

Double Dragon is a joint publication of Arcadia and Tradewest.

PRINTED IN THE U.S.A.

In a recent interview published in the *Wall Street Transcript*, Irving Gould, Commodore's chairman and CEO, offered a candid appraisal about the company's current state of affairs. Indeed, 1988 has been a good year for Commodore. Earnings and profits are up. Despite the good news, Gould acknowledged that Commodore continues to have problems in the U.S. market, where MS-DOS machine sales are still dramatically booming and Apple holds a sizable chunk of the market.

Gould reminded us of the true global nature of Commodore's business, something U.S. consumers often overlook. For example, in 1988, the European market represented nearly 70 percent of total Commodore sales. In West Germany, Commodore holds a commanding position, close to 80 percent of the consumer market; in the German business sector, Commodore is second only to IBM. The market profile for the Scandinavian countries and Switzerland is similar. In Australia and Canada, Commodore is looking at a solid 70 percent of consumer market share.

The work ahead, then, lies in the U.S. Gould noted that the U.S. should represent at least half of any company's business. So what will Commodore do here? After acknowledging that 64 and 128 sales have slackened, Gould stated, "Our future lies in the corporate business part of the market as well as the educational and government markets," and the machine that fits the bill is the Amiga. Gould added that he believes the Amiga is the perfect home computer.

It is on this point that this writer raises a flag—a big red one.

Is the Amiga really the computer that should be sold to the office, to the schoolroom, and to the home? The question is not whether the Amiga has merit in all these environments. It is a marvelous computer on a number of counts. Rather, how realistic is Commodore's approach in positioning the Amiga head-on against a 386-based PC or a Macintosh in the office? Or against Apple in the classroom? Or against a PC compatible, a Tandy, an Apple, or even its own 64/128 in the home? It's naïve to think that Commodore has the resources or marketing savvy to effectively wage war in all three arenas.

It's clear that the Amiga is Commodore's future. Sales are climbing but not yet breaking any records. (Gould pointed out that the Amiga started off slow for lack of software support, but added that the number of titles now exceeds 1500.) However, Commodore's bottom line shows that the Amiga's movement, along with that of its MS-DOS machines, is more than offsetting the gradual decline in 64/128 sales. For years, Commodore did a great job of marketing the 64 and 128. In fact, these machines are still selling at a respectable rate.

But the key to Commodore's future does not lie simply in the existence of the Amiga, but in how this machine is positioned and sold in the U.S. market. If Gould's comments are any clue, the company is in for a long, steep climb. In order to compete dynamically, Commodore must do more than run occasional spot ads suggesting that the Amiga is the machine of choice for business, school, and home. A much more aggressive—and specific—scheme is in order.

The Amiga, to some, might be an everything machine, but the decision makers at Commodore need to find a strategy to convince a very tough, competitive market that this is true. As long-time Commodore supporters, we wish them luck.

There's so much to do on Q-Link, it can't all fit into this ad. For that, you'll need our full-color program guide, with a complete calendar of events and activities. And you'll get that free from Q-Link every month.

Getting into Q-Link.

You'll love being a member of Q-Link. You pay only \$9.95 a month (and any local phone charges) for "Basic" service, which includes unlimited access to the latest news, sports, and entertainment information. Even a full-featured encyclopedia. We also offer "Plus" services such as shopping and travel reservations for only 8¢ per minute extra.

It's time you and your Commodore got out and talked to more interesting people than just each other. And on Q-Link, it couldn't be easier.

Until now, you and your Commodore® could only talk to each other.

Welcome to Q-Link.

You and your Commodore® probably have a very good relationship. But even the best relationships need to grow. That's why there's Q-Link.

Q-Link connects you with tens of thousands of friendly, interesting people all over the country. Share stories, talk shop, tell jokes, or just shoot the breeze with them in a whole new way. On your Commodore.

When you and your Commodore start talking to the rest of the world with Q-Link, exciting things start to happen. Things that are sure to improve your relationship. Like playing the latest interactive, full-color games. Taking college courses. Accessing over 15,000 software programs. Enjoying guest speakers on a wide range of topics.

And Q-Link gives you a direct connection to the experts at Commodore headquarters as well as the major software publishers — a Q-Link exclusive.

Free modem. Free software.

NEWS, NOTES, AND NEW PRODUCTS

By Mickey McLean

Play with the Pros

Tee it up with Jack Nicklaus, play one-on-one with Michael Jordan or Larry Bird, butt helmets with John Elway, or match managerial wits with Pete Rose. Sports-celebrity endorsements are a hot commodity in the entertainment software industry. Some titles feature the player or players in animated action on the screen while others simply carry their endorsement.

Accolade's *Jack Nicklaus' Greatest 18 Holes of Major Championship Golf* (\$29.95) features Nicklaus' favorite 18 holes along with two additional Nicklaus-designed courses.

You can arrange a tee time with either three human opponents, a computerized Jack Nicklaus, or a variety of computerized men and women. Battle it out for big money using Skins scoring or choose stroke play. You also have a choice of pro, men's, or ladies' tees. Designed as an updated version of Accolade's popular *Mean 18*, the new edition has added wind intensity and direction and uphill or downhill lies for more realistic play.

Jack Nicklaus' Greatest 18 Holes of Major Championship Golf is the first joint project produced as the result of a three-year agreement between Jack Nicklaus Productions and Accolade (550 South Winchester Boulevard, Suite 200, San Jose, California 95128). Nicklaus, recently named by *Golf Magazine* as the Player of the Century, plans to work with Accolade on additional home computer golf simulations including several course disks.

"Together, our goal is to create a new breed of golf simulations—products that will help bring the special character and tradition of the game of golf to millions of computer owners," Nicklaus said.

Ralph Giuffre, vice president of marketing for Accolade, said that the use of the name of a celebrity such as Nicklaus in association with a game gives the consumer an instant familiarity with the product.

"The celebrity needs to transcend

Michael Jordan details the finer points of his game for Electronic Arts.

the sport," Giuffre said. "Jack Nicklaus is golf. You know it's a golf product, and you know Jack Nicklaus has high standards."

Another recent release that relies on sports celebrities is *Jordan vs. Bird: One on One* (\$29.95) from Electronic Arts (1820 Gateway Drive, San Mateo, California 94404). The game pits the NBA's two hottest stars in a one-on-one battle. The game also features an Air Jordan Slam-Dunk Contest and a Larry Bird 3-Point Shootout. The two stars assisted the game's designers by offering suggestions concerning their playing style and personal characteristics.

John Elway's Quarterback (\$29.99)

from Melbourne House (711 West 17th Street, Unit G9, Costa Mesa, California 92627) is based on the coin-operated game of the same name. Elway does not appear in this arcade-style football game; rather, he contributes as the game's endorser.

Yet another release scheduled for this spring, from Gamestar (Media-genic, 3885 Bohannon Drive, Menlo Park, California 94025), is the Commodore 64 version of *Pete Rose Pennant Fever* (\$34.95). The game designers have incorporated Rose's philosophies of playing and managing baseball into the game.

Charting GEOS

The most recent addition to the GEOS family of products from Berkeley Softworks (2150 Shattuck Avenue, Berkeley, California 94704) is *geoChart* (\$29.95).

Users can design charts with data imported from GEOS 1.2, 1.3, and 2.0; GEOS 128; *geoWrite Workshop*; *geoWrite Workshop 128*; *geoFile*; *geoFile 128*; *geoCalc*; *geoCalc 128*; and the Note Pad desk accessory. Chart types include pie, unibar, area, point, line, column, bar, scatter point, and scatter line.

Features include the ability to manipulate charts by changing type, fonts, point sizes, and styles. It also supports all 53 fonts in *FontPack Plus*. Charts can be saved in photo and text albums or copied into GEOS applications.

COMMODORE CLIPS

NEWS, NOTES, AND NEW PRODUCTS

California Here We Come

Personal computer users have seen the world, thanks to Blue Lion Software (90 Sherman Street, Cambridge, Massachusetts 02140) and its line of adventure simulations. With the help of Blue Lion, we've visited Paris, London, Spain, and Washington, D.C., without leaving our homes. Its newest release takes players on a journey through eight decades of movie history in sunny Southern California.

Gameplay in this series involves traveling around a city or country, collecting clues and answering questions. Ultimately a mystery must be solved.

In *Ticket to Hollywood* (\$29.95), you must use six detailed 3-D maps to locate famous landmarks. The maps also help you track movie stars around town. While moving through Tinseltown, you are quizzed on trivia to test your knowledge of such stars as Katharine Hepburn, Spencer Tracy, and Humphrey Bogart.

In addition to sightseeing, the object of the game is to follow leads and gather clues which lead to the solution of one of 25 mysteries. You can also question the "director" about your favorite stars or movies.

It's Tax Time Again

Pull out your shoeboxes full of receipts, sharpen your pencil, and get ready to pay your fair share to the federal government. It's time to file your income tax. Taxaid Software (606 Second Avenue, P.O. Box 100, Two Harbors, Minnesota 55616) has released its all-new version of the *Taxaid* (\$49.95) income tax preparation program for Commodore computers.

The new edition includes all the current changes in the tax laws for the 1988 tax year. *Taxaid* prepares IRS Form 1040; Schedules A, B, C, D, E, and SE; and Form 2441. Features include automatic calculations and built-in tax tables.

The Envelope, Please...

Awards in all three computer gaming categories at the 1988 Origins Convention were swept by MicroProse Software (180 Lakefront Drive, Hunt Valley, Maryland 21030).

Pirates! was named Best Fantasy or Science Fiction Game, and it also picked up the award for Best Screen Graphics. MicroProse completed the sweep with *Project: Stealth Fighter* winning the prize for Best Military or Strategy Game.

The Freedom Stick from Camerica operates as a wireless remote control.

Look! No Wires!

Have you ever felt cramped playing a computer game, especially in head-to-head competition? Camerica (230 Fifth Avenue, Suite 1100, New York, New York 10001) has alleviated this problem with a wireless joystick. The Freedom Stick (\$69.95) utilizes infrared technology similar to a television remote control, enabling you to move more than 20 feet away from the screen.

The arcade-style joystick can be switched from manual play to automatic rapid-fire action. You can even aim the stick away from the screen and it will still operate the game. Simultaneous two-player games can be played using two controllers.

The package comes complete with the Freedom Stick, an infrared receiver to attach to the computer, and four suction cups.

COMMODORE CLIPS

NEWS, NOTES, AND NEW PRODUCTS

Save Toontown

You've seen the movie, read the book, and listened to the soundtrack. Now you can relive the movie experience on your 64.

Movie merchandise tie-ins are nothing new, but with the popularity of home computers, movie merchandisers are looking hard at computer games to extend their reach.

The latest example is *Who Framed Roger Rabbit* (\$29.95) from Buena Vista Software (Disney Consumer Products, 3800 West Alameda Avenue, Suite 325, Burbank, California 91505).

Players must help Roger save Toontown from the evil Judge Doom.

Race Benny the Cab through the streets of Tinseltown, try to retrieve Marvin the Gag King's missing will, and then use gags to get past the evil weasels at the cartoon Gag Factory. A map screen displays your progress against Doom. Screens also pop up to reward you with animated prizes presented by characters such as

Jessica Rabbit.

The program is three games in one, each with multiple skill levels, music, sound effects, and animated color graphics. The package includes a Quick Start Card, a full-color poster, and a 12-page Gag Factory Catalog.

Dungeons and Dragons Joins the Computer Age

Strategic Simulations (distributed by Electronic Arts, 1820 Gateway Drive, San Mateo, California 94404) recently reached an agreement with TSR to produce software based on the popular Advanced Dungeon & Dragons game.

Dungeon Master's Assistant, Volume 1: Encounters (\$29.95), a utility program designed to be used with TSR's *Advanced Dungeon & Dragons*, reduces game prep time by several hours per session. The database contains over 1000 encounters and over 1300 monsters and characters. The data can be modified by adding original monsters and encounters.

Heroes of the Lance (\$29.95), derived from the first AD & D Dragonlance game module, *Dragons of Despair*, takes you into the ruins of the temple Xak Tsaroth to recover the Disks of Mishakal. You control eight companions with various skills and attributes in battles against monstrous Draconians, giant spiders, skeletal undead, and Khisanth, an ancient but formidable black dragon.

Other companies jumping on the arcade bandwagon include Mindscape (3444 Dundee Road, Northbrook, Illinois 60062), with a licensing agreement with Sega to distribute its arcade titles, and Activision (Mediagenic, 3885 Bohannon Drive, Menlo Park, California 94025), with the release of Bally's *Rampage*. □

Arcade Mania

The conversion of coin-operated arcade hits into home computer games has become one of the hottest trends in Commodore 64 entertainment software. Some arcade companies offer their own games for the computer market, while others have made licensing agreements with existing software manufacturers.

Two arcade heavyweights, Konami and Taito, are moving quickly into the Commodore arena. Konami (815 Mittel Drive, Wood Dale, Illinois 60191), the largest independent producer of videogames for the Nintendo Entertainment System, launched its home computer effort at last summer's Consumer Electronics Show.

"It was a 'natural' for us to get into home computer games, given our experience in videogames," said Emil Heidkamp, vice president of Konami's consumer division. "We're ready to grow with the industry, providing a continuous library of popular games to home computer users as the market

expands."

Konami's current list of titles includes *Contra*, *Jackel*, *Rush 'n Attack*, *Boot Camp*, *Ajax*, *Castlevania*, *Metal Gear*, *Life Force*, and *Teenage Mutant Ninja Turtles*.

Taito Corporation of Japan has set up a North American home entertainment software subsidiary called Taito Software (267 West Esplanade, Suite 206, North Vancouver, British Columbia, Canada V7M 1A5).

Arcade titles available from Taito include *Operation Wolf*, *Rastan*, *Bubble Bobble*, *Sky Shark*, *Alcon*, *Arkanoid*, and *Renegade*.

**FREE
GAMES!**
with any purchase
From Commodore/Infocom & TCP

As a "thank you" to our many valued customers we are giving away one of these Infocom Adventure Games (your choice), with every order. This offer is good on any of the items in this ad, when ordered before December 31, 1988. If you've never ordered from TCP before, this is a great opportunity to get acquainted!

Software orders over \$100 and Accessories under 6 pounds will be shipped Federal Express

(Even at these prices) You only pay TCP's standard shipping charge. Orders arriving before 3:00 PM our time will be shipped out same day. If part of your order is backordered the remainder will be shipped UPS Ground FREE!

SECURITY

- Your Credit Card is not charged until your order is shipped.
- We insure your order at no extra cost to you.
- Tussey is a financially strong and well established company.

CUSTOMER SUPPORT

- After sales support.
- Knowledgeable staff, all graduates of Tussey's "Computer Boot Camp".
- Our advanced warehouse/materials handling system assures your order is shipped out accurately & on time.
- Our IBM AS400 allows instant order and inventory status.

To order: No surcharge on MasterCard or VISA ■ Your credit card is not charged until your order is shipped ■ COD orders accepted - no COD fees ■ Shipping : 3% or \$5 minimum for UPS Ground. Call for shipping charges on Express Air, APO, FPO, AK, HI and foreign orders. ■ Mail Orders: We accept money orders, certified checks, and personal checks. Allow 2 weeks for personal and company checks to clear. ■ We accept purchase orders from qualified Educational and Corporate institutions. **ALL SALES ARE FINAL.** Defective items replaced or repaired at our discretion. Pennsylvania deliveries add 6% sales tax. Prices and terms subject to change without notice.

Alphabetizing "SpeedCheck" Dictionary Files

I frequently use "SpeedCheck" for the 64 (December 1985 Gazette and the SpeedScript disk). Is there a way to alphabetize my SpeedCheck dictionary so that I can more easily check the entries for spelling errors?

A. J. Parone, Jr.
Philadelphia, PA

The following short program reads in each SpeedCheck dictionary file (64 version only), sorts it, and writes it back to the disk:

```
EQ 10 POKE53280,12:POKE53281,1

{DOWN}[RVS] DISK ERROR:
";ER$;" ";EM$;ET$;ES$:
CLOSE1
DM 330 RETURN
```

Lines 10-20 clear the screen and wait for the user to insert the dictionary disk. Line 30 opens the disk error channel (using the subroutine at 290-300) and then opens the dictionary file (with the subroutine at 310-330). The number of words in the file is determined by lines 40-60. Lines 70-120 read the words from the file and place them in the array WD\$. The shell sort in lines 130-200 sorts the array. And finally, lines 210-280 write the file back to the disk.

SpeedCheck has a unique way of storing words in its dictionary files. First, it leaves off the first letter of each word, since all words in a particular dictionary file begin with the same character. Second, instead of using a separator character between words, it sets the high bit of the byte representing the last character in a word. This storage format makes dictionary files smaller but slows the sort

program because it must initially de-code the file.

Disk Drive Memory

I've been using a cassette drive with my 64 for the last three years. Now I'm trying to learn machine language, and it seems to me a disk drive is a necessity. One thing is not clear in my mind: Does a disk drive add memory to a computer?

Robert Snellman
Wyandotte, MI

When you turn on your Commodore 64, it shows 38911 bytes of free RAM. Adding a disk drive does not change this number. So in that sense, a disk drive does not add memory to your system. But a disk drive does provide a different type of memory—external memory. The disadvantage of external memory is that it takes longer to read from or write to than internal RAM. The advantage is that it is not volatile—write your data to a disk and your information will be safe.

If you think of a disk drive as a super-fast, ultrareliable cassette drive, you won't be very wrong.

One matter that confuses the issue is the fact that Commodore drives have small RAM banks of their own. They use this memory for temporary workspace. In general, this RAM is of no interest to beginning programmers. It has been used to rewrite portions of the Commodore DOS. For example, GEOS writes its disk speedup routines into this RAM for faster operation.

Printer: Are You There?

Some time ago, I wrote a budget program in BASIC. I took great care to put a lot of error trapping into it so that common mistakes wouldn't exit the program with an error message. My problem is I can't figure out how to test for a printer. If I try to print out my final results without having the printer turned on, I get "DEVICE NOT PRESENT" and

lose all my data. Please tell me how to test for this.

Alan Moyer
Natick, MA

From BASIC, it is quite easy to check whether the printer is online. Output a null character—CHR\$(0)—and then read the reserve variable ST. The short routine below performs this test:

```
100 GOSUB900:END
900 OPEN4,4,0:PRINT#4,CHR$(0)
910 IFST=0THENPRINT"PRINTER
PRESENT":CLOSE4:RETURN
920 PRINT"CHECK PRINTER":CLOSE4
930 PRINT"PRESS SPACE BAR TO TRY
AGAIN"
940 GETAS:IFAS$="" THEN 900
950 GOTO940
```

You can use the same technique in machine language, or you can rely on the Kernal routine CHKOUT. CHKOUT specifies the file number representing the current output channel and must be called just prior to sending a character with CHROUT. Many Kernal routines, including CHKOUT, return with the carry bit set if an error occurs. An offline printer is one such error that CHKOUT recognizes.

Here is a short ML routine that redirects output to the printer and checks for its presence using CHKOUT:

```
; Check printer routine
;
SETLFS = $FFBA
SETNAM = $FFBD
CLOSE = $FFC3
OPEN = $FFC0
CLRCHN = $FFCC
CHKOUT = $FFC9
STROUT = $AB1E
GETIN = $FFE4
;
PRCHK LDA #1 ;use channel 1
LDX #4 ;printer is device 4
LDY #0 ;secondary address
JSR SETLFS ;set logical file
LDA #0 ;length of filename is zero
JSR SETNAM
LDA #1
JSR OPEN ;open printer channel
LDX #1
JSR CHKOUT ;send output to channel 1
BCC PROK ;carry is clear - no error
LDA #1 ;otherwise, handle error
JSR CLOSE ;close channel to printer
JSR CLRCHN ;restore I/O
LDA #<MSG ;Print error message
LDY #>MSG
JSR STROUT ;using ROM string printer
JSR GETIN ;wait for space bar
CMP #32 ;space is ASCII 32
BNE WAIT
JMP PRCHK ;space pressed, so try again
PROK LDA #1 ;printer is online
JSR CLOSE ;close printer channel
JMP CLRCHN ;restore screen output and RTS
;
MSG .ASC "CHECK PRINTER, PRESS SPACE BAR TO TRY AGAIN"
.BYTE 13,0
```

A Commodore Network

I own a Commodore Plus/4, a Commodore 128, and a 1541 disk drive. I was wondering if I could connect both computers to the drive at the same time. Would this burn up the circuitry inside any of the units?

Benji Courliss
Goldsboro, NC

We connected a Plus/4 and a 128, a 64 and a 128, two 64s, and two 128s directly to a single disk drive—a 1541 and then a 1571—without much success. In all cases, the drive failed to operate properly or at least was unreliable.

There are some commercially available "black boxes" that permit two or more computers to be hooked up to a single peripheral. In fact, in our listing room, several computers share the same printer.

When the Commodore 64 was new and disk drives cost \$600, there was more demand for these black boxes. Now, it may not cost you much more to buy a second drive. If you are still interested, try writing to Black Box Catalog, P. O. Box 12800, Pittsburgh, Pennsylvania 15241.

Many schools connect Commodore computers together using networking systems such as RTC's Multi-Link Networking System and Berkeley Softworks' geoNet. These systems allow the teacher greater flexibility and control over a classroom full of computers. These prod-

ucts are designed primarily for use in schools. Write to RTC Multi-Link, 110 Riviera Drive, Unit 10, Unionville, Ontario, Canada L3R5M1; or Berkeley Softworks, 2150 Shattuck Avenue, Berkeley, CA 94704.

Random Noise

There are some applications, especially in the area of scientific research, where BASIC's RND function just isn't random enough. I have heard that there is a way of generating random numbers on the 64 using the SID chip. I assume this involves PEEKing some location which holds a random value from 0 to 255. But I can't find this location. Also, how would I convert this output to a specified range—say, a random number from 1 to 10?

Mike Nichols
Kansas City, MO

Indeed, you heard right. Voice 3 of the SID chip can be used to produce random numbers, and with very little code.

In October 1988 "Feedback," we showed how to produce random numbers using this technique from machine language. Here's how to do the same thing from BASIC.

Somewhere near the beginning of your program, initialize the chip for random-number generation. First, set the frequency to maximum so that the random-number value changes rapidly. Next, select the noise (or random) waveform and turn off the audio output so you won't have to listen to the noise.

```
10 REM INITIALIZE VOICE 3 FOR
RANDOM NUMBERS
20 POKE54287,255:REM SET VOICE 3
FREQUENCY
30 POKE54290,128:REM SELECT NOISE
WAVEFORM
40 POKE54296,128:REM TURN OFF
VOLUME AND VOICE 3 OUTPUT
50 REM MAIN PROGRAM
60 LL=1:UL=10:GOSUB1000
990 END
```

Now, whenever you need a random number, just PEEK location 54299. This returns an integer value in the range 0-255. Since you want an integer 1-10, you must adjust this number so that it's in the proper range. The subroutine below does this for you. Before calling it, set the variable LL to the lower limit of the range and the variable UL to the upper limit (see line 60).

```
1000 A=PEEK(54299)/256
1010 X=INT(A*UL)+LL:RETURN
```

Announcing COMPUTE!

Preview and sample up to \$200 worth of
and produced by some of the best software

Silent Service

Exhilaration & Tension!
New submarine simulation
genuinely recreates World War
II underwater warfare. From
MicroProse.

John Elway's Quarterback

Ground-pounding excitement!
Faithful computer version of the
#1 arcade winner, by the
game's premier quarterback,
John Elway. From Melbourne
House.

Gunship

Revolutionary 3-D graphics &
outstanding joystick firing sys-
tem! Realistically simulates
AH-64 Apache helicopter. From
MicroProse.

Pirates!

Search and plunder!
Become a 17th century pirate
captain searching the Carib-
bean for ships and cities. From
MicroProse.

Airborne Ranger

Fast-paced action-simulation!
Danger & excitement of combat
and infiltration as a single sol-
dier controllable in 8 directions.
From MicroProse.

Caveman Ugh-lympics

Hilarious Neanderthals!
Go for the gold in this pre-
cursor to modern olympics. From
Electronic Arts.

Project Stealth Fighter

Experience the thrill!
Pilot a state-of-the-art U.S. Air
Force COSAIR (covert, sur-
vivable, in-weather, recon)
strike fighter. From MicroProse.

Experience, try out and get a taste of
challenging game demos, realistic simulations, and
more. This is your chance to check out hundreds of
dollars worth of software programs from a special
group of commercial software developers
participating in *COMPUTE!'s Demo Disk Pack*
promotion.

To boot, receive your own complete samples of
some of the best COMPUTE! disk programs ever
published . . . with our compliments.

We can't think of a better way to help you
decide what software to buy. But hurry! This offer
expires January 31, 1989. Order your own *Demo
Disk Pack* today. And order some for your friends.
They make great gifts.

COMPUTE!'s Demo Disk Pack!

the latest commercial software— developed
houses in the personal computer industry...

PLUS receive as a special
bonus a free COMPUTE! sampler
including a cross-section of
some of the best of COMPUTE!
Publications' own disk programs,
complete and ready to run.

All for only \$9.95
for the Commodore 64/128.

Strike Fleet

Hunt down the enemy!
Command a high-tech naval
task force. Your treacherous
theaters of operation: the Per-
sian Gulf, the Falklands, or the
North Atlantic. From Electronic

Out of Sight!

F-19 STEALTH FIGHTER will turn your computer into the hottest flying machine on today's electronic battlefield. The graphics are that vivid ... the game play that challenging ... and the realism that convincing.

Learn the secrets of stealth flying — maintaining a low electromagnetic profile to evade enemy radar and mastering the tactics that only a stealth pilot dares to try. MicroProse has painstakingly researched stealth technology — and we make it real!

You'll discover hundreds of action-packed scenarios in real-world regions — from a deep-strike mission in North Africa to a reconnaissance flight over Central Europe. We'll train you in the basics, but only your skill and cunning can save the day.

Featuring

- Carrier and land-based take-offs/landings
- Advanced electronics, counter-measures
- Intelligent enemies — land, sea, air opposition
- Realistic flight experience

A Guided Tour of Major Online Services

Tom Netsel
Assistant Features Editor

Do you collect baseball cards? Play games? Travel? Read news? Shop? Invest? Chat? These are just a few things you can do from the comfort of your home with your computer, a modem, and a few extra dollars. Here's a look at each of the major online services and what they offer Commodore subscribers.

Arguably, the duller piece of software is a terminal program. You may get a message saying it's activated, but in most cases the program just sits there—no whistles, no flashing lights, no invading aliens. But watch what it does when you plug in a modem and log on to one of the major telecommunications services.

Within seconds your screen comes to life with a world of possibilities. Tap your keyboard and buy a camera, check airline schedules to Rome, chat with other callers, battle invaders from space, play bingo or chess, read the latest news from China, research a term paper, get help with a program you're writing, or download free computer software.

All this and more is available

to national telecommunications-service subscribers. Some services are available 24 hours a day, but most charge higher rates during the day or during prime-time hours. Other services are available only at night and on weekends, when connect charges are lower. CompuServe recently dropped its prime-time rate entirely, charging the same price for day or evening calls. Look for other services to drop or substantially reduce their prime-time rates as well.

If a service is in Virginia and you live in Arizona, don't worry about your telephone bill. The services maintain local phone numbers in most metropolitan areas or provide access through one of the telecomputing carriers, such as

Tymnet, Telenet, or Datapac (for Canadian subscribers).

Here's a look at the leading online services and their fees, and a rundown of the major features they offer Commodore subscribers.

CompuServe

CompuServe calls itself the largest online information service, with more than 460,000 business and consumer subscribers throughout the world. CompuServe is so popular in Japan that arrangements are under way to establish a local telephone number to serve that country's growing list of subscribers, says Dave Kishler, CompuServe's supervisor of corporate communications.

CompuServe supports several Commodore forums, or special-interest groups (SIGs), dedicated to the 64 and 128. Each forum has its own message board, library of software, and conference area. The Commodore Users Network includes an Arts and Games forum, a Communications forum, a Programming forum, a Service forum, and a Commodore Newsletter.

If you have a question about Commodore equipment or a specific piece of software, you'll find other users ready to supply an answer. If you're having trouble getting a new word processor to work properly with your printer and interface, chances are others have experienced the same problem and are more than willing to pass along a solution. There's even a hotline to the Commodore factory if no one else can help.

In addition to computer-related areas, CompuServe has 150 other forums, covering such topics as aviation, entertainment, finance, health, sports, and travel. Each forum has its own library, message board, and conference area.

Sending written messages electronically is a popular feature on all the online services, and it's especially true with CompuServe's broad base of international users. But communication is not limited to CompuServe subscribers. Compu-

Commodore forums and SIGs

Software libraries

Electronic mail

Current news

Serve's electronic mail system, EasyPlex, is now tied into MCI and Telex. Log on to CompuServe, go to your EasyPlex mailbox, compose a message, and send it to any Telex machine in the world. By the time this issue appears, CompuServe will have added a worldwide fax link, allowing subscribers to transmit facsimiles of printed documents.

CompuServe has a \$39.95 registration fee. Charges are \$6.00 an hour for 300-baud and \$12.00 an hour for either 1200- or 2400-baud, 24 hours a day. CompuServe recently dropped its prime-time charges.

CompuServe, P.O. Box 20212,
Columbus, OH 43220; 800-848-8199;
Ohio residents, 614-457-0802

Delphi

Delphi continues to expand and enhance its numerous online services and features. Younger subscribers will want to check out their own conferencing and message base in a new forum called Person-Person, located in Delphi's entertainment area.

Other recent additions include a twice-weekly trivia contest called TQ!, an anagram puzzle called Scramble, and Immortality, an online adventure game. Subscribers play traditional board games as well as interactive and single-player adventure games.

Delphi's Commodore SIG for 64 and 128 users contains a library of public domain software for downloading, a message board, and a conference area. MANIAC is devoted to computer art and graphics. Artists post their masterpieces and download the works of others. If you have questions about any 64 or 128 painting or drawing program, MANIAC supporters can probably supply the answers.

Several SIGs are devoted to noncomputer subjects such as writing, theology, science fiction, music, movies, and aviation. Users with an interest in foreign languages may want to check out Terra Nova. This SIG, designed primarily for international callers, lists all Delphi menus and help files in five languages. Terra Nova also offers a translation service that is beneficial for many business subscribers. Menus and files are available in Japanese, French, German, Spanish, and Esperanto.

Merchant's Row offers subscribers online shopping, including access to Comp-U-Store, a discount shopping service. Going on a cruise to the Caribbean or flying to Hawaii this winter? The Electronic Connection provides a database for planning your vacation or business trip and offers discounts on cruise and airline tickets.

Delphi also offers callers complete financial news and reports, electronic mail, and two electronic encyclopedias.

Delphi's \$49.95 registration fee

includes two hours of connect time. The non-prime-time rate for either 300-baud or 1200-baud is \$7.20 an hour. The prime-time rate between 7 a.m. and 6 p.m. weekdays is \$17.40. Premium services, such as Telex, fax, and some financial reports, carry a surcharge.

Delphi, 3 Blackstone St., Cambridge, MA 02139; 800-544-4005; 617-491-3393 in Massachusetts

Dow Jones News/Retrieval

Dow Jones emphasizes news and financial information for the business community and for consumers who want to access such information from their homes.

"The service is designed for the individual looking for information in the corporate sector," according to Dow public relations manager Carla Gaffney. "If a company is interested in tracking the competition, acquiring another company, or just checking a rumor, our service will help them."

You can search through more than 45 databases for financial information from the *Dow Jones News Service* and the *Wall Street Journal*. If you need to check back issues of the *Journal*, Dow Jones has complete issues dating back to January 1984.

Dow Jones' online information includes company profiles, statistical information, and financial information on 10,000 publicly held corporations. Information is supplied from such sources as Zack's Corporate Earnings Estimator, Insider Trading Monitor, Disclosure, and Investext.

Quick Search is a Dow Jones service that provides a full report on specific corporations. Compiled from multiple databases, Quick Search includes late-breaking news stories, a company profile, and complete financial information in one package. An online portfolio alerts subscribers to any late-breaking stories or announcements that could affect a firm's stock prices or earnings.

Although past performance can't guarantee future trends, in-

Sports

Weather

Fax connections

Contests

Games

vestors considering a particular offering like to know its record. Trade Line, a recent Dow addition, provides historical information dating back 15 years on stocks, bonds, options, and mutual funds.

The Dow Jones registration fee is \$29.95, which includes five hours of connect time. After the first year, there is a \$12.00 annual fee. At 300-baud, the rates are 95 cents a minute between 6 a.m. and 6 p.m. and 20 cents a minute during non-prime time. At 1200-baud, the rates for those times are \$2.09 a minute and 44 cents a minute, respectively; they go to \$2.47 and 52 cents at 2400-baud.

Dow Jones News/Retrieval, P.O. Box 300, Princeton, NJ 08543; 800-522-3567

Genie

"We have a significant number of new customers who have never used a computer before, never used a modem, and they're looking for help," says Bill Loudon, GENIE's general manager. "If they have a question about their computer or a piece of software, they can go directly to our staff of experts and get an answer. GENIE is a great people-resource for consumers who have questions."

GENIE supports more than 60 RoundTables, and these SIGs include all major computer brands. Ask questions, post messages, access software libraries, or join conferences on a variety of computer-related topics. Commodore users will be particularly interested in GENIE's 6100 games, graphics programs, and utilities for the 64 and 128.

In addition to computer SIGs, GENIE has expanded its RoundTables to include such topics as photography, writing, science fiction, scuba diving, politics, games, education, and genealogy. Recent additions include religion and ethics, aviation, and radio and electronics.

The GENIE Mall has more than 40 merchants who sell wine, clothing, coffee, computer items, fishing supplies, and jewelry. One even provides quotes on new automobiles and accessories, information that will help you negotiate a fair price for your next BMW.

NewsGrid provides users with current stories compiled from 18 news services such as the Associated Press, Reuters, and China's official news agency, Xinhua. Specify key search words or phrases and quickly locate news, sports, business, or weather stories of interest.

GENIE offers stock quotes, travel information through American Airlines' EAASY SABRE reservation system, and a 40-channel CB simulation called LiveWire. GENIE has a special \$50-a-month charge for unlimited access to LiveWire.

Stellar Warrior and Stellar Emperor are popular science-fiction games that offer a degree of complexity that should challenge the

avid game player. Other multiplayer games include flight simulators, chess, blackjack, backgammon, and Gemstone, a D & D adventure.

GENie charges \$35.00 an hour for access weekdays between 8 a.m. and 6 p.m. and \$5.00 an hour during non-prime-time hours for either 300- or 1200-baud. There is a surcharge of \$7.50 for 2400-baud. A one-time registration fee of \$29.95 includes two hours of access time. By the time this article appears, GENie may have announced a significant reduction in its prime-time rates.

General Electric Information Services, 401 N. Washington St., Rockville, MD 20850; 800-638-9636

PlayNET

If you're looking for games and you like to chat online with other 64 and 128 users, consider PlayNET. Designed exclusively for Commodore owners, PlayNET offers 11 online games that incorporate color and graphics, including chess, backgammon, and bridge, and three text-only games, bingo, poker, and blackjack.

Traditional multiplayer games have been enhanced for the 64 and 128 by the addition of color graphics. "You see a full-color chessboard on your screen," says PlayNET president David Panzl, "and your opponent sees the same thing. It feels remarkably like sitting across the table from the guy, and you can talk back and forth while you play."

PlayNET's menu makes it easy for subscribers to find their way around the system, which supports a variety of interesting SIGs. The CB simulation is especially popular, but keep an eye on the clock—chatting with other users is addictive.

PlayNET has a large library of public domain software available for downloading. Another library, the Software Trading Post, offers programs for sale that have been

Conferences

Art

International links

Shopping

Travel reservations

written by other users. Programmers upload their program to PlayNET and offer it for sale. If other subscribers download the program, PlayNET bills their accounts, crediting the full amount to the seller.

Tutorials, message boards, game shows, online shopping, role-playing games, and live discussions are other popular features. PlayNET plays host to about 40 special events each week. Its forums tend to cover social issues, computer-related topics, and education. Trivia contests and games patterned after "The Dating Game" and "The Newlywed Game" are especially popular.

Like QuantumLink, PlayNET requires special software to take advantage of color graphics on the 64 and 128. These Commodore-specific systems compete more with each other than with the other ASCII services. Q-Link has more subscribers, but PlayNET has a dedicated following. "A lot of people tend to feel PlayNET is a friendlier sys-

tem," Panzl says. "That has to do with us being a smaller system. I think people just get to know each other better on PlayNET."

PlayNET's \$19.95 registration fee includes the necessary terminal software. A monthly maintenance charge of \$12.00 includes three hours of access time. PlayNET is accessible between 6 p.m. and 7 a.m. weekdays and all day weekends for \$3.60 an hour, 300-baud only.

PlayNET, 105 Jordan Rd., Troy, NY 12180; 800-PLAYNET

QuantumLink

Designed for 64 and 128 users exclusively, QuantumLink, like PlayNET, requires its own special terminal program. Its easy-to-follow menus are controlled by the function and cursor keys, eliminating the need for special commands. Downloading programs is especially easy. Although PlayNET and Q-Link resemble each other, their terminal programs are not interchangeable.

Q-Link provides guest speakers, special events, contests, tutorials, and live seminars. There's something scheduled almost every hour. Astronomy, foreign languages, cooking, human sexuality, baseball cards, trivia, and a teens-only club are just a few of its forums.

Hardware support groups, news, graphics, music, programming, CP/M, and games all have dedicated message boards, conferences, and software libraries for the 64 and 128.

People Connection is Q-Link's social center where subscribers chat CB-style. Up to 23 people can occupy a room at one time. Rooms have names that give users some idea of what to expect before they enter. If you don't see a room you like, you can open your own. Rooms called Teens Only, Girls Only, Argue with Me, Alternate Lifestyles, Over 30, and Sex are just a few of the popular gathering spots.

The Commodore Information

Network supports a hot line to Commodore, and representatives are often online to answer questions. GEOS information, updates, and patches are available from Berkeley Softworks. Electronic Arts, Brøderbund, and other major software companies often host on-line discussions.

QuantumLink, available only during non-prime-time hours and on weekends, has no registration fee other than the \$9.95 software, which is supplied at no extra charge with GEOS and other software. Users pay \$9.95 a month for unlimited basic service, plus six cents a minute for certain selected services.

QuantumLink, 8619 Westwood Center Dr., Vienna, VA 22180; 800-392-8200

People/Link

Talking with other users online is a popular feature on most systems, and it's no exception at People/Link. In fact, this division of the American Home Network offers 100 PartyLines for People/Linkers, or *Plinkers*, as they're usually called.

Commodore users will want to stop by several of the 22 Clubs and Forums to see what's happening with other 64 and 128 owners. In addition to the computer SIGs, if you have an interest in business, games, education, writing, or science fiction, People/Link has a SIG for you. There's also a group for teens.

Electronic Mail lets Plinkers compose, edit, and send mail to other users at the touch of a key. Subscribers upload letters, documents, binary files, or programs that have been written offline, saving on connect charges.

Plinkers buy discounts on cruises, tours, and other travel-related services and products. TWA's online TravelShopper provides information and reservations for airline tickets, hotels, and rental cars. Online shopping is another

Financial information

Stock quotes

Research

Horoscopes

Film and book reviews

popular feature that's being expanded.

People/Link's registration fee of \$15.00 includes a one-hour credit. Non-prime-time rates between 6 p.m. and 7 a.m. Monday through Friday and all day weekends are \$4.95 an hour for 300- or 1200-baud and \$11.95 for 2400-baud. Prime-time rates are \$11.95 for 300-baud, \$12.95 for 1200-baud, and \$14.95 for 2400-baud.

Join the Frequent Plinker Club for \$15.00. Club dues are \$10.00 a month but members get a 25-percent discount on all rates. This can save you money if you are online more than eight hours a month at 1200-baud.

Plinkers who call via Telenet's PC Pursuit are charged \$3.00 an hour, day or evening, at 300, 1200, or 2400 baud.

American Home Network, 165 N. Canal St., Suite 950, Chicago, IL 60606; 800-524-0100; Illinois residents, call 312-648-0660

The Source

The Source offers a wide variety of business and consumer online services and continues to update and enhance its databases and other features. Find answers to your questions about computer hardware, software, and applications from industry experts or subscribers who have faced similar problems.

Each SIG has its own message board, member directory, databases, and software files. The Source supports all major computer makes, in addition to offering SIGs for game enthusiasts, science-fiction fans, and business professionals.

CHAT lets subscribers converse with other members, and SOURCEMAIL handles the electronic mail. There is even an area for holding online business meetings.

The Source's bulletin board service provides more than 70 categories of online classified ads. Post messages or buy and sell items or services. An online shopping catalog offers bargains ranging from electronic equipment to sporting goods.

Stock-market reports, financial newsletters, and online portfolios are just a few of the investment opportunities on The Source. Other areas of interest include news, sports, weather, airline information and reservations, software and movie reviews, horoscopes, and the Grolier Academic American Online Encyclopedia.

The Source charges \$30.00 to register and has a \$10.00 monthly fee that applies to connect time. Prime-time access between 7 a.m. and 7 p.m. is 36 cents a minute for 300-baud, 43 cents a minute for 1200-baud, and 46 cents a minute for 2400-baud. Non-prime-time rates are 14 cents a minute for 300-baud, 18 cents a minute for 1200-baud, and 20 cents a minute for 2400-baud.

The Source Information Network, 1616 Anderson Rd., McLean, VA 22102; 800-336-3366

SEVEN WAYS TO MAKE YOUR COMMODORE SCREAM

1) EXPLOSIVE COMMANDO RAIDS.

Now you can take the world's number one arcade game home! All the action-packed arcade thrills of this awesome hostage rescue are ready for home video play.

2) SUPER-HUMAN WARRIOR LORDS.

Now you can thrill to one of the biggest-ever coin-op hits on your home computer. Rastan's mind-blowing graphics takes you to a magical land of adventure and excitement.

Taito® Arkanoid™, Renegade™, Alcon™, Bubble Bobble™, Sky Shark™, Rastan™ and Operation Wolf™ are trademarks of Taito America Inc. Copyright

THE ONLY GAME IN TOWN!™

COMING SOON. THE CLASSIC MIND GAME, QIX.

3) BUBBLE BLOWING DINOSAURS.

THESE ARE TWO HUNGRY DINO-MIGHTS AND THEY'VE GOT BUBBLE FIGHTN FUN DOWN TIGHT. You and your two brontosaurus buddies, Bub and Bob, are up to your brows in bubble trouble. You've got to battle battalions of bubbles by blowing and bursting billions of bubbles. It's a fast-paced bubble banquet through 100 screens of slobber-happy suds. Get an appetite for fun... then get blown!

The #1 game in Europe for 3 months. Scramble through 100 screens as your brontosaurus buddies, Bub and Bob, drive you crazy with non-stop action.

4) DEATH-DEFYING ACES.

Take the arcade's meanest air battle home for keeps. Strap in for explosive high-flying action. Hold on for your life as you soar through incredible graphics.

5) INTER-PLANETARY WARFARE.

Now you can blast into one of the hottest arcade space games right in your own home. It's the ultimate inter-planetary combat. You've never seen action like this.

6) OUTER SPACE GRID MONSTERS.

Don't settle for imitations. The game voted "one of the best home video games ever" by Electronic Game Player Magazine is ready to blast into your home.

7) RAGING STREET RUMBLES.

This is the original arcade hit. Thrill to the arcade quality graphics of this fast-paced, street-style karate brawl. Find out what real action is all about!

Taito games will make your Commodore scream with the sights and sounds of arcade action, adventure, survival, destruction, heroes, villains and heart-pounding thrills.

These are the world famous arcade originals and they're ready to wail on your Commodore. Arkanoid,TM Alcon,TM Bubble Bobble,TM Operation Wolf,TM Rastan,TM RenegadeTM and Sky SharkTM will make your Commodore do things you didn't think were possible.

Everyone knows that arcade games are the benchmark for all other video games and Taito has been an arcade leader since 1953. Since then we've made over 1,000 classics for arcade and home play. Count on Taito to bring the heat of the arcade to your home computer.

Buy Taito products at leading stores everywhere. Visa/MasterCard holders can order direct anywhere in the U.S. by calling 1-800-663-8067.

HOW TO GET PUBLISHED (AND MAKE MONEY)

David Hensley, Jr. and Randy Thompson

Want to see your name in print?

Each year, thousands of people like you are getting their work published in computer magazines. COMPUTE! Publications alone publishes more than 150 programs each year. Where do these programs come from? Most of the time they come from you, our readers.

How you present your program is often just as important as the program itself. You can't just mail your program on disk to a magazine and expect it to be published (you'd be surprised how many submissions arrive this way). Although it may be the best thing since *SpeedScript*, without documentation and a cover letter, it's likely that your submission will be rejected upon arrival.

If you're serious about getting a program published, the tips in this article will help you on your

way. From drafting the main article to preparing your software, it's all here.

Learn how to get your programs published by a computer magazine and make money programming. Here's the inside scoop on what magazine editors look for.

What Does It Do?

All submissions should include documentation. More than anything else, a program article must explain what the program does and how it's used. It's best to state what

the program does in the first two paragraphs of the article, and then explain how to use the program.

Try to make your instructions as easy to follow as possible. That way, all users—from beginners to experts—can benefit. Before you start writing, study articles from the magazine you're planning to submit to. By looking at previously published articles, you can judge such considerations as article length, style, and other things relative to your program.

More than anything else, your article should be informative and clearly written. Editors are more concerned with the content and readability of an article than with its style.

The first page of your article should contain the following information: your name, address, telephone number, the title of your

program, and the date of your submission. Also, list the program's requirements. Does it require a joystick? Does it need a printer? Does it run in 80-column mode on the 128?

Ideally, articles should be typed or printed on a printer. Handwritten articles are difficult to read. All lines within the text of the article should be double- or triple-spaced. If you use a word processor to write the article, send a copy of the article on disk in ASCII format. Most word processors provide an option for saving a document as plain ASCII text or in unformatted form (Commodore ASCII is acceptable). Here at *GAZETTE*, we welcome articles written in *SpeedScript* format.

Take the time to write a short cover letter to accompany your article. Cover letters help identify a submission. Your cover letter should explain that the program is a submission, and then it should describe briefly what the program does, why it's useful, and who would use it.

Presenting the Software

Documentation is important, but the most crucial element of a program submission is, of course, the program itself. Avoid submitting programs that cover narrow topics or ones that require obscure hardware devices. Editors and submissions reviewers look for programs that contain new and original ideas, but, to be accepted, the program must also appeal to a broad audience.

Program size is another consideration. Most publications list their program submissions within the magazine, making it impossible to publish extremely long programs. As a general rule of thumb, BASIC programs should be no more than 15K in length, and machine language programs should be no more than 5K.

Want to catch the magazine editor's attention? Include a demonstration program. A demo also saves an editor's time—something almost all will appreciate. And a demo gives the evaluator an immediate idea of what your program is and what it can do.

The longer it takes to get your program up and running, the less likely it is that it will be bought.

This is especially true of utilities. If your program uses or requires certain files, such as hi-res pictures or text files, provide those files on your disk. Machine language programs should be accompanied by source code.

DO

- State what the program does in the first two paragraphs of your article.
- Save your article on disk in ASCII format.
- Provide a cover letter.
- Include a demonstration program.
- Keep a backup of your disk and a copy of your article.

DON'T

- Send in a program without providing documentation.
- Forget to include your name and telephone number, the title of your program, and the date of your submission on your article or cover letter.
- Submit a program that requires the use of an obscure hardware device.
- Send more than one submission in an envelope.
- Submit a program to more than one magazine at a time.

Supply and Demand

What type of software is in demand? Games, educational programs, and short, original programming utilities. Here at *COMPUTE!*, we're continually swamped with sprite editors, DOS-enhancement programs, and specialized databases (bowling secretaries, record collections, videotape filers, and so on). Utility programs are fine, but computing should be fun as well as productive. Every time we receive a quality game, such as "Arcade Baseball," "Basketball Sam & Ed," or, more recently, and in this issue, "Crossroads II: Pandemonium," we snatch it up. It's the same with educational programs. Commodore computers are widely used in schools and in homes with children, yet good educational submissions are rare.

To fine-tune your submission,

request a copy of the magazine's author's guide. This guide will give you a more detailed description of what the editors expect to see. Author's guides are not intended to serve as a directory of what types of programs a magazine is currently seeking—that changes too often and is influenced by a variety of factors—but it's meant to remind you of form and style of articles and program submissions.

It's in the Mail

There are several things to consider before you drop your submission in the mailbox. Publishing companies receive a tremendous amount of mail. It's always possible that some will be temporarily misplaced or misguided. Although these situations are rare, it's a good idea to make a backup of your disk and a copy of your article before mailing them.

Package the submission securely. Large-sized office envelopes seem to work best. To avoid damage, place your disk in a disk mailer or tape it between two thin pieces of cardboard. To ensure that your article is directed to the correct person, address the envelope to "Program Submissions Reviewer."

Before sealing the envelope, check to make sure everything is included. The package should contain the following: a disk that contains at least two copies of the program, an article, a cover letter, and a self-addressed, stamped envelope. Screen shots, photos, and artwork are not necessary, but in some cases they're helpful. Do not send more than one submission per envelope, and be sure to provide the correct postage.

The next step is simply to wait. Most magazines reply to submissions within 4–8 weeks.

Getting Published

Getting a program published can be a rewarding and satisfying experience. There's a certain pleasure in seeing your name in print. Besides, getting a program accepted by a computer magazine means money in your pocket. And what better way is there to share your work with the world?

With a little ingenuity and the tips listed here, you, too, can be a published program author. ☐

KONAMI HITS ARE HEADING HOME.

With our new software, your favorite arcade games come alive on your home computer.

If you own an IBM, Amiga or Commodore computer—Watch out! Because 4 of Konami's most awesome adventures are about to invade.

You'll confront the missions you've dreamed of in Rush 'N Attack, Contra, Jackal and Boot Camp. And you'll find yourself face to face against unequalled challenges, with incredible graphics, awesome music, and sound effects that'll blow you away.

So check out Konami's newest action wherever great software is sold. And be prepared for war.

Pool of Radiance

Dungeons and Dragons virtually created the entire genre of role-playing games. In these games, you typically become a character in a fictional world, trying to stay alive to gain wealth and experience as you move from adventure to adventure.

Even from its beginnings as a board game, D & D quickly expanded its influence. The publisher, TSR, added books of rules; coined a new name, Advanced Dungeons and Dragons (AD & D); and watched the games become a cultural phenomenon. Groups of teenagers, almost exclusively boys, spent entire summers playing the game, and more than a few college students sacrificed their studies to take part in endless D & D sessions. The newspapers were full of sensational tales of youthful obsession, many based on stories that were almost certainly apocryphal. School boards banned it, parents forbade it, and—quite naturally—the game's popularity increased as a result.

All computerized role-playing games have their roots in the AD & D board games, including the text adventures and even some simulations and arcade games. If you've played *Wizardry*, *Bard's Tale*, *Phantasia*, *Wasteland*, *Ultima*, *Zork*, *Beyond Zork*, *The Pawn*, *Starflight*, *Star Commander*, *Road Wars*, or one of many, many others, you have experienced Dungeons and Dragons' influence.

AD & D itself has never been computerized, at least not in a licensed version. Banking on its considerable reputation with the war-gaming hobbyists, SSI has released the first of a projected line of licensed AD & D products. SSI's intention is obvious: to bring AD & D to the computer in a faithful, competent, and intelligent manner. To that end, SSI plans a series of adventure games, action games, and Dungeon Master's aids.

Pool of Radiance, a role-playing adventure, kicks off the whole thing. Released first for the 64, the box is packed with four disks (not copy-protected), a code wheel (which provides the copy-protection), a 30-page rules manual, a 40-page adventurer's journal, and a 4-page quick-start card for 64 users. The quick-start card lets you jump right into

the game, but, before long, you'll want to settle back and study the other booklets.

As in most role-playing games, you begin by forming your party of adventurers. Once this is done, you send your party out into the ruined city of Phlan. In the small, civilized part of Phlan, you'll find shops to buy equipment and goods, a training ground for furthering skills, several temples and taverns, and a city council for receiving news and missions. Civilized Phlan also has a dock area, where you can catch a ship for the Sorcerer's Island. The main screen display shows the world from the character's point of view, looking straight ahead down a street or corridor. Other views include an overhead area map and, when applicable, a wilderness map.

After visiting the city council and receiving a mission, you begin by taking control of Phlan from the monsters and evil characters. First stop is the slums, which you work block by block, gaining experience and treasure as you go. With inexperienced characters, you'll have to leave the slums after defeating each group of enemies; later, you can explore and clean out additional blocks without having to go back each time to the civilized area.

Of course, you'll find items in the slums that will help you later. When the slums are finally cleaned out, you go back to the city council, collect your praise and rewards, and receive a commission for another adventure. You'll find other opportunities listed on the walls outside the council or by overhearing rumors in the taverns or from characters you meet. Missions include

ridding the swamps of lizard men, preventing a band of nomads from attacking Phlan, discovering the source of river poisoning, and rescuing an heir. As you might guess, none of these is easy.

In keeping with AD & D's origins in war gaming, *Pool of Radiance's* combat is quite elaborate. When you join a battle, the display becomes a battle display. You can set the computer to control any or all of your characters in combat, or you can take control of as many of them as you want. Taking control means moving them into position against the enemy and directing them to attack or defend in various combinations. Characters can aim at specific targets, change weapons, bandage injured party members, turn undead enemies away from the party, use items, cast spells, and so on. Of course, all this takes time, especially when fighting a large group of enemies. As I write this review, my 128D is running through a computer-controlled battle of six characters against many orcs, and the fight has taken 20 minutes to execute. If you control all your characters individually, expect battles to run as long as 60-90 minutes.

To judge *Pool of Radiance* fairly, we need to ask two questions. First, how does it fare as a recreation of the AD & D gaming system? Second, how does it fare against its competition in the computerized fantasy role-playing genre? The rest of this review will concentrate on those two questions.

Pool of Radiance does not attempt to recreate all of the rules of AD & D. What it does, instead, is concentrate on the "feel" of the parent game. For example, there are only six character races available—dwarf, elf, gnome, half-elf, halfling, and human—but these represent quite well the kinds of races possible in AD & D and its offspring. There are also only four classes—cleric, fighter, magic-user, and thief—but again the range is represented. The game uses AD & D's alignment system, with the program keeping track of whether or not the characters act according to their moral guidelines.

Because they demonstrate most clearly SSI's commitment to the AD & D model, character creation and the use of magic deserve special mention.

Creating a character involves several steps, which the program guides

you through. First, you choose the character's race; then you choose the gender. Next, the screen shows a value (up to 18) for each of six characteristics: Strength, Intelligence, Wisdom, Dexterity, Constitution, and Charisma. You can keep these characteristics, or choose Roll Again to generate new ones as many times as you like. Then you select the character's class. In the case of nonhuman characters, combinations are possible: a half-elf, for instance, can be anything, including a combined fighter/magic-user/thief. Next, you select the character's alignment, and finally you give him or her a name.

So far, this is the standard procedure for creating characters in an AD & D game, but this next step is both new and impressive. A picture of the character appears in the top-right corner of the screen. You can then choose from a variety of heads and bodies, customizing your character's appearance. The only drawback is the amount of time needed to load the individual graphics from the disk (this could have been smoother), but the idea is very good. After selecting the appearance, you then design the icon for the character, as it will appear on the battle screens. You can choose from several weapons and stances, as well as indi-

vidual color for arms, bodies, and so on. It's a nice touch, and it allows you to identify the characters as they enter the battle display.

You can also cast magic spells. One method is to memorize spells, which are forgotten when cast, as in AD & D. Magic-users can enter spells in a spell book and cast them using a Read Magic spell. This spell is also used to cast spells from a scroll. Unlike magic-users, clerics pray each day to get their spells; as you might expect, clerical scroll spells can only be cast by clerics. You'll also find that spells do not always succeed.

Overall, how does it compare? *Pool of Radiance* comes with the built-in legitimacy of AD & D, so role players new to the electronic version, especially those with AD & D experience, should probably start here. As the system evolves, incorporating more AD & D features, it will become increasingly appealing to a crossover crowd. The adventure plays well, maintains interest, has a well-designed interface, and takes a long, long time to complete. In other words, it's like most other computerized role-playing games.

But is it better than *Bard's Tale*? Or *Ultima*? Obviously, that's a matter of personal opinion. On the 64, *Pool's* disk access is much too slow, but that's true

of the other two games as well (to say nothing of *Wizardry* or *Alternate Reality* on this system). Certainly, *Pool of Radiance* includes too much fighting and not enough character interaction, but only *Ultima* has made definite steps towards easing that problem. *Pool's* combat system is clearly too time-consuming, but for some it will address an omission on the part of the other games. All in all,SSI's first AD & D product holds up well against its impressive competition.

It will be interesting to watch the system develop. *Bard's Tale* and *Ultima* have both undergone substantial improvements, and *Pool of Radiance* will likely go through the same process. Will future adventures add more AD & D features? If so, will they vary with each adventure? Will character classes, races, and magic spells grow in number in an effort to keep the AD & D players happy, or is the system basically set? Whatever the outcome, AD & D players have a fascinating package to examine and explore. *Pool of Radiance* won't satisfy them completely, but it represents a good and significant start.

—Neil Randall

Flight notes

3A

✦ **Better Loops with Flight Simulator** - While the "Flight Physics" manual description is adequate for most, we get enough calls from frustrated computer pilots unable to perform a loop to warrant the following additional instructions. For those already successful at looping the aircraft, these instructions should help make your loops rounder and more satisfying.

After diving to the suggested looping airspeed (180 knots will do), add as much up elevator as possible without stalling the aircraft. As you pitch up and airspeed slows you will have to reduce some of this elevator pressure. Many people leave the elevator setting on high and become frustrated when the aircraft stalls before pointing straight up. In a perfectly round loop your elevator should be almost all the way back to neutral by the time you're upside down. Since airspeed is very slow at the top of the loop (and the portion of the circle traveled is small), your pitch attitude change should be gracefully slow as well. Start adding up elevator pressure again as airspeed increases. By the time you get to the bottom of the loop, the up elevator setting should be where it was when you began the maneuver and your airspeed should be adequate to begin another loop.

In summary, up elevator setting varies throughout the loop. The faster your airspeed, the greater the up elevator pressure. Flight Simulator is the only simulation on the market that accurately portrays the flight characteristics of a light aircraft when performing this maneuver. In reality there's little room for error in the amount of up elevator you can use, and meeting the challenge of performing a perfectly round loop can be a very satisfying experience. You may even find yourself more knowledgeable about loops than many non-aerobatic pilots who fly real airplanes. Happy trails!

Bubble Ghost

Well, I can't help it if you've never heard of a bubble ghost. Everyone else knows that ghosts spend their time blowing bubbles. If you didn't take in this bit of wisdom along with your strained baby food, then blame your parents.

Actually, ghosts don't blow bubbles. They create bubbles from soapy water, or whatever that stuff is, and use their ghostly breath to push bubbles through 35 rooms (or levels) of a dank and moldy laboratory. The ghost must complete the hazardous course before he can find eternal rest. At any rate, that's what it says in Accolade's documentation for its new game.

Blame the bubble ghost for the game's hazards—the apparition is the spirit of a crazy inventor who haunts his own laboratory. He filled his lab with crazy inventions, and, for some strange reason, they all have sharp edges. (Maybe it was one of his inventions that got him into this mess.) It's up to you to help him blow his bubble under, over, around, and through 35 levels of insanity.

At the start of the game, you'll be presented with a menu for choosing options for one or two players, sound on or off, and a practice mode that works with any level except number 35. My knowledge of the various obstacles comes almost exclusively from this last option and from watching my children play the game. I prefer not to say which level I reached on my own, but with the same number of dollars, I wouldn't expect any change back at McDonald's.

As the game begins, you find the ghost and a bubble floating in midair at the right side of a room with stone walls. Press your joystick's fire button, and the ghost puffs his cheeks and blows the bubble across the room toward an opening. One puff won't be enough, and you'll have to follow the bubble by moving your ghost with the stick.

As you go through the opening, you'll see your score advance. You get bonus points based on how few bubbles you used, whether you caused the ghost to blow so hard he got red in the face, and how much time it took to complete the level.

The first room is easy enough. Accolade starts you there to get you familiar with the game. From then on, prepare for frustration.

In the next room, a spinning object is in your path. You may be good enough to pass over it just at the right moment. It's possible, but not likely. Instead, rotate your ghost 90 degrees, move him under the bubble, and blow the bubble upward. (If you rotate in the wrong direction, you'll find yourself blowing at the floor. Not only is this

counterproductive, but it also makes you look stupid.)

If you blow too hard, the bubble will hit the ceiling and burst. So be ready to get above it and blow it downward. (Yes, I realize that now you're blowing toward the floor, but this time it's necessary.)

If the bubble touches anything, it will burst. The fact that many rooms have sharp objects means little, except for its psychological effect. You could just as easily pop your bubble against a down pillow as an industrial drill bit.

More meaningful hazards come in the form of electric fans that can alter your bubble's course. To test your timing skills, you'll encounter rooms with extremely narrow passages and intermittent laser beams.

At the start of the game, you receive six bubbles. Break a bubble, and you get another one, until you've depleted your supply of six.

At the end of a game—which comes very soon for some of us over the age of 13—you'll have the chance to type your initials next to your score on a hall-of-fame board. You may have the chance, though I never did. My children, Mike and Kelly, filled the board with ridiculously high numbers that didn't give their father a ghost of a chance.

That's *Bubble Ghost*. It's distinguished by good graphics; good animation; a theme song that, thankfully, can be toggled off; and a delightful ghost with a good range of expressions. It's fun, frustrating, silly, challenging, ridiculous—all the things that make pure arcade games worth playing.

One note of caution: Animation and graphics of this quality use most of the memory locations of your 64; you'll probably need to disconnect your printer and/or second disk drive before the game will run.

We're Software Discounters Of America

The Original Software Discounters

Over 1900 products at your fingertips

We stock nearly 1900 titles plus accessories in our warehouse, from today's latest, hottest software hits to that old favorite you've been trying to find for years.

Everything on sale, everyday

We couldn't call ourselves discounters if we didn't have great prices. In our catalog you'll find everyday savings of up to 50% on the software you want. Compare our prices. Then give us a call, and save.

**Ultra
Saver**

Look for the "Ultra-Savers" for even greater savings

When you look through our catalog, you'll see we have terrific bargains every day. But some of our bargains are so great, they stand out from the rest. We call them Ultra-Savers.

Just look for the Ultra-Saver symbol. It's your guide to even greater savings.

Software Discounters of America pioneered the discount software concept. We've been at it longer than anyone else, and we're better at it than anyone else.

We've got the product, the prices, and the service you want.

We treat our customers right

You don't stay in the business as long as we have without learning a few things about how to treat your customers. So we don't charge extra for credit cards.

And on those rare occasions when we don't have a product in stock, we don't charge your credit card until we get it and ship it.

That's what we'd expect, and that's what we deliver.

Things you should know.

We place these ads months in advance, so prices and availability can change (usually for the better). We accept VISA and MasterCard, cashiers checks, money orders, and personal checks (3 weeks clearance). Free shipping on orders over \$100 in the continental U.S. On orders under \$100, add \$3.00. For AK, HI, FPO, APO, add \$5.00 to all orders. For Canada & Puerto Rico, add \$7.50 to all orders. You must call for a Return Authorization # before returning defective merchandise. We will replace defective merchandise with the same merchandise; other returns are subject to a 20% restocking fee. Order lines open M-TH 9:00 AM-7:00 PM; FRI 9:00-5:00 PM; SAT 10:00 AM-4:00 PM Eastern Time. Extended holiday hours (11/1/88-12/15/88) M-TH 9 AM-9 PM; FRI 9 AM-6 PM; SAT 10:00 AM-4:00 PM. For information or customer service, call 412-361-5291 M-F 9:00 AM-5:30 PM Eastern Time.

See if you're a winner

We're giving away hundreds of \$ in software to people on our mailing list. How do you know if you've won? Look for the list of winners in this catalog, and in our ads every month in major computer magazines. If your name is listed, you're a winner!

Not on our mailing list? Call our toll-free number and order one of our great software bargains. Your name will automatically be added to our list. Or send us a postcard with your name, address, city, state, zip code, and computer model today. No purchase is necessary to win.

"We're committed to making shopping for software easy and enjoyable."

HELL ON WATER

PROCEED IMMEDIATELY TO MILITARY HOT-SPOTS FOR NONSTOP GUNSHIP ATTACK. YOU COMMAND THE FASTEST ATTACK MISSILECRAFT ON THE HIGH SEAS TODAY.

YOUR ORDERS: REPEL SOVIET INTRUDERS IN THE BERING SEA. PUNISH DICTATORS AND DRUG SMUGGLERS IN CENTRAL AMERICA. SECURE VULNERABLE TARGETS IN SOUTH-EAST ASIA. LEAD RETALIATORY STRIKES IN THE PERSIAN GULF.

THIS IS NOT AN EXERCISE. REPEAT THIS IS NOT AN EXERCISE. THIS IS WAR AT SEA.

KICK BUTT OR

SWIM FOR SHORE.

You're loaded for bear and taking no prisoners, with Sea Sparrow and Harpoon missiles, 76mm cannon, depth charges, infrared chaff, and ECM radar jammer.

In the Briefing Room, you learn that somebody's messing with Uncle Sam again. Get your orders, outfit your ship, assign your crew, and head for the action.

Full aerial map shows the theater of operations, while dual radar screens monitor close-in combat maneuvers and long-range strategic movements.

Mavis Beacon Teaches Typing

Unlike its typewriter counterpart, a computer keyboard is connected to a device capable of acting as a typing instructor. Software Toolworks takes full advantage of this capability in *Mavis Beacon Teaches Typing*.

Combining solid instruction and reinforcement strategies with smooth animation and entertaining lessons, *Mavis Beacon* provides a pleasant environment for acquiring or honing typing skills. The depth of its lessons is impressive, from the variety of words in even rudimentary drills to entries from *The Guinness Book of World Records*. *Mavis Beacon* can be tailored to any skill level and is filled with many thoughtful extras and asides that enhance the illusion of personalized instruction. For example, for young typists, rhymes and riddles serve as diverting drills. The illusion of personality is so complete, in fact, that I find myself referring to Mavis as though she were real.

The command interface evidently received as much care as the instructional aspects. Drop-down menus are used to good effect here, simplifying movement among the many modules and options. Both overall program and lesson-specific menus can be sum-

moned at any point by way of consistent, minimal commands. I would, however, appreciate a list of available lessons—home-row keys, top-row keys, and so on—from which to select. Other needs and requests have been anticipated. A formatted data disk is required for storing your progress—acting as Mavis's gradebook, as it were—and a format command is part of the introductory menu.

At startup, you are asked to introduce yourself; afterward Mavis includes your name in her lessons. You must also rate your typing skills by one of several broad categories, from Beginner to Advanced. A fairly smart program, *Mavis Beacon* adjusts the difficulty of your lessons to suit your abilities.

At the lower levels, a sound balance is struck among the lecture, practice, and drill categories. Beginners are first introduced to the home-row keys—a to the apostrophe—the most important on the board. Tutorials consist of text screens, designed to resemble blackboards, telling which finger serves which key.

Those keys, in turn, are practiced in the classroom, which is where *Mavis Beacon* really starts to shine. A 64 keyboard and screen appear, with shadowed fingers at rest on the home-row keys. You are prompted to type a particular key with the correct finger. As

you do, the shadow typist strikes the same key. (The shadow, needless to say, always uses the correct finger.) Thanks to excellent animation and a well-designed screen, this section of the program makes learning finger placement and keyboard layout as painless as possible.

I particularly like the fact that the classroom can be called up exclusive of specific lessons. This is a convenient feature worth leaning on for those keys your fingers just don't want to remember.

Actual drill takes place in the workshop, where more specialized tools are added to the basic classroom display. These include meters which register speed, accuracy, and progress toward completion of the current assignment. A metronome is available for setting the proper typing pace. Drills consist of real words, with numbers and punctuation marks added as your abilities increase. The instruments flank the lesson screen but don't distract from it—unless I'm really off the mark, at which time I only have eyes for the gauges.

At the end of each drill, your results are posted, showing your words per minute (wpm) along with accuracy and an adjusted wpm to reflect your errors. When the program determines that you could do better, it gently suggests that you try a drill again. Recurrent errors can be addressed through

Put yourself in their shoes.

Be Michael "The Slam-mer" Jordan or Larry "The Shooter" Bird. You

decide who wins. Is it today's most exciting player, MVP Michael Jordan, or the Player of the Decade, Larry Bird?

Jordan and Bird: Software Designers

Michael wanted quickness, speed and air. Larry's fadeaway and sweetspots were critical. Power Jams for Michael, Larry's 3 point bombs. They

got all they wanted plus jab steps, pump fakes, shot blocks, steals, 360° dunks and more.

One On One is Three.

Jordan vs. Bird vs. You in three ultimate matchups—One On One, the Slam Dunk Competition and the 3 Point Shootout.

Designed by Garth Hitchens, Mark Madland, Michael Jordan and Larry Bird.

For IBM/Tandy, Commodore 64 and 128 computers. Visit your retailer or call 800-245-4525 from US or Canada. 8am to

5pm Pacific Standard Time. IBM is a registered trademark of International Business Machines, Tandy is a registered trademark of Tandy Corporation, and Commodore 64 and 128 is a registered trademark of Commodore Electronics Limited.

ELECTRONIC ARTS®

The Classic Confrontation: One On One. The crowd goes crazy as Michael and Larry unload all their patented moves.

Aerial Warfare: The Air Jordan Slam Dunk Contest. Up to 4 players challenge each other or Michael himself in a battle of Power Jams. Designed by Jordan.

Long Range Bombing: 3 Point Shootout. 25 shots in 60 seconds from 23' out. Don't blow the money ball. Larry's signature event.

special lessons that you can request or design yourself.

A more technical picture of your skills—or lack thereof—is available via Mavis's graphs. Here, bar graphs display your relative levels of facility with each key, the keys with which you are most familiar, and so on.

With records for each session stored on the data disk, a cumulative picture of your progress quickly accrues, and the acuity of Mavis's insights into your typing increases. With more data, Mavis is better able to customize lessons aimed at solving problems. As the program's admirably literate and thorough manual points out, there are many categories of typing errors, including poor accuracy, dropped letters, mistyped keys, transposition of letters, and more. According to the manual, Mavis analyzes your typing through 30 different "yardsticks," keeping an eye out for the error areas mentioned above, along with 15 other error categories. The program quickly identified and focused on my particular typewriting shortcomings and also caught deliberately created error patterns.

When drill becomes tiresome, the classroom can be abandoned in favor of the arcade. This turns typing into a fast-paced road rally, with your progress determined by the accuracy and speed of your typing. Mistyped keys earn a nice

splat of something on the windshield. After the race, your results are available in a variety of formats. As typing games go, this is a nice one, well animated and colorful; still, it was my least favorite section of the program.

Mavis's higher levels might challenge even experienced typists. Here, a default rate of 60 wpm is supported by a madly ticking metronome. Keys are shown being depressed, but the shadow hands are gone. The words thrown your way are maddening, too. In one exercise I encountered *intumescence, arboretum, inundated*, and dozens more multisyllabic Latinate words selected to send my fingers all over the keyboard.

The further you progress into Mavis's store of teaching tools, the more practical the tools become. Fundamentals of computer keyboards are addressed. You are shown proper page setup for single- and multipage letters and documents. *Mavis Beacon's* handsome, oversized manual includes several sample letters for typing. A whole section of the manual and, more importantly, of the software, addresses proper résumé format.

Mavis Beacon's manual is a model of documentation. In addition to thorough coverage of the program's goals and methods—with Commodore operational specifics on a reference pamphlet included in the package—the

manual contains an elegant, literate history of typewriting. The history makes fascinating reading, highlighting the many attempts to perfect mechanical writing machines. Among the anecdotes is an account of Mark Twain's interesting, and typically cantankerous, role in typewriter development. A bibliography includes both historical and technical references; sections of the manual and the bibliography deal with the Dvorak keyboard, which many adherents feel is superior to the standard QWERTY.

This is a large program, filling both sides of two disks. As a result, there's a fair amount of swapping during setup. Loading the program takes time even with a fast-load cartridge, but the wealth of entertaining instruction makes the wait more than worthwhile.

I've waited, in fact, for a couple of decades and a few million words of published work to shift from a proprietary three-finger typing system to a sensible ten-finger one. What I was waiting for, it turns out, was the right typing teacher. *Mavis Beacon* is that teacher.

The Games— Summer Edition

Like most Americans, I participated in the Olympic Games in Seoul, South Korea, only by watching the events on television—sitting in the comfort of my sofa or standing on top of my coffee table, depending on the pace of the action. Now that the roller-coaster ride of emotions is over, my coffee table is safe for another four years—or is it?

To the delight of coffee-table manufacturers everywhere, Epyx has introduced an Olympic simulation, *The Games—Summer Edition*. Although Epyx has produced other interactive Olympic games, this latest version may be its best. I didn't expect to be impressed with *The Games*, thinking it would probably be a copy of Epyx's earlier hit, *Summer Games*. Instead, I discovered a sports game that captures the spirit and emotion of the XXIVth Olympiad, distilling the Olympic ambience into two double-sided disks and a companion coaching manual.

Buying this game is a lot like purchasing a commemorative coin as a keepsake of the recent games. Because the software is officially licensed by the United States Olympic Committee, future U.S. athletes will benefit from the sale of the product.

1-(800) 727-6937

Allow me to take you on a tour of this computerized world of international camaraderie, sportsmanship, and world-class competition. After you've loaded the program, you're greeted with pleasant Oriental music and a pictorial map of South Korea overlaid with photographs reminiscent of the opening ceremony. Following a brief animation sequence, you quickly move on to the Olympic Village to prepare for the competition and your chance to win the gold.

Like the best athletes, you should practice your sports vigorously, especially if you want to stand on the tallest of the three blocks at the awards cere-

*I didn't expect to be
impressed. Instead, I
discovered a game that
truly captures the spirit
and emotion of the
XXIVth Olympiad.*

mony. You'll need to practice each of the eight events time and again before starting the competition. As many as eight players can compete for Olympic fame and glory, with each player choosing to represent any of 18 countries. Multiple players can also choose to compete as a team under the banner of one nation.

The enclosed coaching manual explains the joystick moves you'll need to master for both practice and competition. The manual also gets you into the spirit of the games with true stories of past Olympians and great moments in Olympic history.

A quick tour around the gymnasium reveals two very difficult events—difficult even for the best of athletes. The uneven parallel bars and the rings require your steady concentration as you put together and perfect your gymnastic routines. With persistence, a perfect 10 is possible. I came nowhere near this score, even when I assumed the role of a Soviet gymnast.

In the velodrome, the 1000-meter cycle sprint pits two players against each other, or one player can race a computer opponent. Drafting techniques and strategy help you conserve energy for the all-important bell-lap sprint to the finish. The monitor screen is split in half so you can view the race from cycle level and from a bird's-eye perspective.

Over at the track, the hurdles event requires you to clear ten 42-inch-high hurdles over the course of 400 meters. To run well, you'll need speed, spring, and timing. Your computer opponent is swift and sure, but you can overtake

your adversary once you get your timing down. It does take a while to extend your legs over the hurdles, so jump early to avoid tripping.

Moving to the center of the track, we find the field events. At the hammer throw, strength and timing determine how well you'll throw a heavy cast-iron ball attached to a chain. The faster you rotate and the more precisely you time the release of the chain, the further the hammer will fly.

In the pole vault, you'll use a flexible pole to jump over an adjustable bar and land on a foam mat. Electronic fireworks explode on the stadium's Diamond Vision screen to celebrate a successful jump.

Now that you've worked up a sweat, it's time to cool off in the diving competition. Five persnickety judges rate your dives as you springboard to glory and gracefully descend into the water. With a little practice, you'll be nailing inward back pikes and forward twists that would make gold medalist Greg Louganis turn green with envy.

Finally, we move over to the archery range, where arrows travel the length of a football field on their way to the target. You'll learn to judge the wind's speed and direction, with the twang of your bow signaling the launch of each arrow and renewed hopes for success.

The closing ceremonies feature the competitors who have won the most medals, along with the national anthem for the Olympian on the highest platform. The closing graphics are as detailed as the opening scenes, creating again the feeling of actually participating in the XXIVth Olympiad.

Because *The Games—Summer Edition* revives the same excitement I feel every four years with the real Olympics, I rate this game a 9.975. It could just as well be a 10.

ACTIVISION

Disc Blitz

Peter Marino

Do you believe in flying saucers? If you don't, you will soon. "Disc Blitz" pits you against endless hordes of alien flying saucers.

You only have a few short lives. Use them well.

Typing It In

Disc Blitz is written in BASIC, but it includes some machine language code in DATA statements. Type in the program using "The Automatic Proofreader," which can be found elsewhere in this issue. Be sure to save a copy of the program to tape or disk before you attempt to run it.

When you're ready to take on the aliens, load "Disc Blitz" and type RUN. You'll see the Disc Blitz title screen. Press the fire button to begin a game.

In Disc Blitz, you control a fighter that hovers on the left side of the screen. You can move up and down only. To fire, press the fire button. Hold it down for rapid fire. The flying saucers you face fly in several different formations. You're on your own as you learn how to

Battle ever-changing formations of aliens in this fast-paced arcade-style game for the 64.

A smooth-scrolling background and a space-age musical score set the stage for this addictive game.

The aliens are relentless. If you're not careful, your next move could be your last move.

avoid their nasty aggression.

When a flying saucer runs into you, you lose a life. You start with four lives, so you must play carefully. There are five levels, but it will take quite a bit of practice to make it that far.

Since the program is written in BASIC, it can be easily modified. You can change the levels, add bonuses, or give yourself a great number of lives.

See program listing on page 96.

bombardment

Forrest Bentley

This two-player arcade-action game for the 64 will keep you and a friend on the move. Take advantage of your weapon—the powerful PlasmaBlaster—but don't shoot yourself in the foot. Two joysticks required.

You had hoped it wouldn't come to this. You and a friend started an argument in the Galactic Council. Arguing is strictly forbidden in Council chambers, and rightly so—how else could all the business of the Milky Way get done? You were sentenced to settle your disagreement in the Plasma Pit. Only one of you will emerge. Hopefully, the victor will have learned a lesson: It doesn't pay to argue.

So here you are, you and a friend—now mortal enemies. You face each other across the pit, PlasmaBlaster to PlasmaBlaster. It's sad to think that one of you will die just because you couldn't agree whose turn it was to pay for the coffee.

Getting Started

"Bombardment" is written entirely in machine language. Type it in using "MLX," the machine language entry program found elsewhere in this issue. When MLX prompts you, respond with the values given below.

Starting address: C000
Ending address: C90F

Type in the data for the program. Before exiting MLX, be sure to save a copy of the data to tape or disk.

To start the game, plug two joysticks into your computer. Now, load the program with a statement in the form `LOAD "filename",8,1`. Tape users should use a statement

Get ready for "Bombardment," a fast two-player action game that keeps you running for your life.

in the form `LOAD "filename",1,1`. Specify the filename you used when you saved the program from MLX. Type NEW and then SYS 49152. You'll see the infamous Plasma Pit.

Dodging Plasma

The joystick plugged into port 1 controls the player on the right side of the screen. The other joystick controls the player on the left. Move your player by pressing the joystick in any direction. Fire your PlasmaBlaster by pressing the fire button. Each time you squeeze the trigger, you'll fire a deadly ball of plasma. The pit is magnetically sealed, so the plasma ball ricochets around the room until it strikes something (namely, you or your opponent). The more plasma balls you and your opponent shoot, the more frantic the game becomes.

If you run while you shoot, the plasma ball you fire will move even faster than a normal ball of plasma. Be careful not to run into your own shots; they're just as deadly to you as they are to your opponent.

Both players begin the game with five lives. The winner is, of course, the player who survives. At the end of the game, you'll be asked if you want to play again. Press Y to play another game or N to quit and return to BASIC.

See program listing on page 95. ©

ANNOUNCING
ACCOLADE'S
NEW SPORTS
GAMES.

Bud

BUD COLLINS
Television tennis analyst

"What do I expect from a computer tennis game? Realism. I want to sense the power of a strong fore-

hand, the ease of a smooth backhand. Accolade's Serve & Volley gives me

that realism—and more.

"Serve & Volley truly captures the essence of the game—the action, the strategy, the pressure. You can select and place your shots via the animated "Strobe-O-Stroke" graphics. There's match or tournament play, three levels of difficulty, even three different court surfaces.

"Why should I leave the office to cover a tournament? Now I can play one on my computer with Serve & Volley."

Hank

HANK STRAM
Radio voice of NFL Monday Night Football

"I've seen some great moves on the football field but nothing compares to the moves you'll find on 4th & Inches computer football. This is real pro football action with 11 animated players per side. It's great! The ball's snapped and you have 22 guys running around the screen buttin' heads!

"But the best part about 4th & Inches? The control. I pick the starters. I control the key players on offense and defense. Heck, this is a head coach's dream come true! And the playbook?

Fantastic. You get a pro style playbook with 20 plays and 11 different formations.

"Somebody at Accolade really knew their X's and O's when they drafted 4th & Inches. Great game plan, guys!"

Marv

MARV ALBERT
1988 Olympic boxing commentator

"I used to think my broadcast booth at ringside was the closest I'd ever come to the true boxing experience. Then I played T.K.O.

computer boxing. Talk about "up close and personal!" T.K.O. put me right in the ring, face

to face with a heavyweight champ.

"During a fight I like to do all the jawing. With T.K.O. I got to jab at a fighter's jaw. I threw a right... it landed! I could actually see those familiar signs of wear and tear on the champ's face. At the bell, the champ had a black eye, a fat lip and—I suspect—a bruised ego.

"It's a unanimous decision. Accolade's T.K.O. captures the feeling of boxing like no other game.

Jack
JACK WHITAKER
ABC golf announcer

"Jack Nicklaus is unquestionably the greatest golfer of his time and

I've been fortunate enough to follow his play on the greatest golf courses in the world.

"Jack Nicklaus' Greatest 18 Holes Of Major Championship Golf is the Golden Bear's personal selection of the most challenging holes in all of golf. Holes that have decided the four major championships.

"Accolade has come up with a simulation that not only recreates each hole with stunning accuracy—but it allows the player to golf against a computerized Jack Nicklaus. Quite an accomplishment.

"Jack never settles for second best. This is the computer golf game that others will be judged by for years to come."

Chick
CHICK HEARN
Voice of the Los Angeles Lakers

"To play championship basketball, you've got to have a great fast break. To play three-on-three, full court computer basketball you've got to have Accolade's Fast Break.

"No other computer basketball game gives you this much control and playability. You run the offense and defense. There are more plays, more players and more shots. And the thing that really impressed me was the network television court perspective. The animation was so fluid—I thought I was watching my monitor at The Forum!

"Take it from a guy who's seen his share of great fast breaks—Accolade's Fast Break is a slam dunk."

ACCOLADE™

OFFICIAL RULES—NO PURCHASE NECESSARY

How to Enter. Provide all the information called for on the official entry form (including your choice of Sports Fan Fantasy prize), or print this same information on a plain 3" x 5" piece of paper and mail your entry in time for receipt by March 31, 1989 to Accolade Play-By-Play Sweepstakes, P.O. Box 914, Wilton, CT 06898-0914. Enter as often as you wish, but each entry must be sent in a separate envelope via First Class Mail.

Prize Awards. The five (5) different Sports Fan Fantasies listed on the entry form comprise this program's prize offering, each fantasy to include such transportation arrangements and other accommodations as may be necessary for two persons traveling together, including the sports event tickets. All arrangements shall be made by Accolade at its discretion as to announcer visit time and place and event selection. Applicable period for fan fantasy arrangements shall be 4/15-12/31/89. Each winner will be offered the option of receiving \$1,500 cash instead of the fan fantasy prize for two.

Winner Drawings. One winner will be chosen for each of the five different Sports Fan Fantasy prizes by means of a series of random drawings to be conducted on 4/1/89 by AMA, Ltd., an independent judging organization whose decisions are final. Prize winners will be notified by mail by 4/8/89. Odds of winning the Sports Fantasy indicated as an individual entrant's choice depend on the number of entries received indicating that same event choice. Winners will be required to provide social security number and to sign an affidavit of eligibility and publicity/travel release. Tax liability on prize winnings is responsibility of each winner. Prizes are not transferable, although any prize won by a minor will be awarded in the name of a parent or legal guardian.

Eligibility. Sweepstakes open to all U.S. residents except employees of Accolade, Inc., its marketing agencies, this program's suppliers, and their immediate families. Void wherever prohibited or restricted by law. To request a list of the prize winners, send a stamped, self-addressed envelope before 4/1/89 to: Accolade Play-By-Play Winners, P.O. Box 7180, Wilton, CT 06897-7180.

Jewel Grab

Brian Casey

Outwit roomfuls of smart robots to nab precious gems in this challenging arcade-style game for the Commodore 64. Joystick required.

No one knows who built the mine that was recently discovered on the far side of the moon. But frankly, you're not interested in the archaeological significance of the find. You've been hired by the MegaBux Corporation to do what two previous expeditions have failed to do—bring back the loot.

To do that, you'll need to avoid the dangerous sentries that the few survivors of the second expedition speak of. Those sentries will chase you down if you take too long to get the jewels, most of which are placed inconveniently in the mine.

When you decide to play "Jewel Grab," bring a joystick and your wits.

Getting Started

Jewel Grab is written in machine language, but it loads and runs like a BASIC program. Type it in with "MLX," the machine language entry program found elsewhere in this issue. When MLX prompts you, respond with the values given below.

Starting address: 0801
Ending address: 17B8

Carefully enter the data for the program. Before exiting MLX, be sure to save a copy of the program to tape or disk.

To play a game of Jewel Grab, plug a joystick into port 2. Load the program and type RUN. The game asks you to select a speed in the range 1-4. For your first game, try 1. Start the game by pressing the fire button. You begin Jewel Grab with five lives.

The mine has four levels. Each level consists of six rooms. Suspended in each room are several jewels. Collect them all to progress to the next level.

Robot Guards

Each room has at least one sentry. The sentries operate by first scanning for your position and then moving to that position. Some sentries scan often and home in accurately but move very slowly. Other sentries move quickly but scan infrequently. You'll have to adjust your strategy depending on the types of sentries that you face.

If you're zapped by a sentry, the room you're currently in is restored to its original condition (the jewels are replaced).

Make money the hard way—collect jewels from an archaeological dig on the far side of the moon.

You have several resources with which to gather the jewels and avoid the sentries. Use the joystick to move along the girders and ladders that are strewn throughout the mine. Jump by pressing the fire button while pushing the joystick left, right, or up. You needn't worry about running off the ends of the girders—because of the moon's weaker gravity, you can survive a fall from even the highest of girder.

Sometimes, you just won't be able to get to a jewel. In these cases, you can carry up to four girder sections and four ladder sections to

build a path to the stubborn jewels. To pick up or drop a girder piece, pull the joystick down and press the fire button. To pick up or put down a section of ladder, simply press the fire button alone. The number of girders and the number of ladder sections that you are carrying are both displayed at the top of the screen.

Freeze, Buddy

Each room is equipped with a clock. If you grab the clock, the sentries will be confused; they'll freeze for a few moments. Keep an eye on the red bar at the top of the screen—it shows the amount of time that the sentries will be frozen. The sentries are still deadly while they're frozen, so don't walk into them.

If you manage to capture all the jewels, you'll be awarded a bonus life (you can have up to ten lives). There are 24 screens in all. You win if you make it through all of them.

It pays to be patient when you play Jewel Grab. Try moving to a bare part of the screen for a while; the sentries will begin to gather around you, and you can dart away to grab the jewels on another part of the screen.

The sentries memorize your position every time they execute a scan, so you can get a head start if you begin running as soon as you hear the telltale sound that indicates scanning. Each sentry on a screen scans at a different time, so it may take some fancy footwork to get around them all.

Press the SHIFT LOCK key to pause the game. You can quit Jewel Grab by pressing Q. (By the way, Jewel Grab features a special cheat key: Press R to advance to the next room.)

See program listing on page 92.

European Rush Hour

Accolade's Grand Prix Circuit is the Formula One racing simulation that whisks you to an exclusive world of power, passion

and performance.

You'll race for the world-renowned teams of McLaren, Ferrari, and Williams on the greatest Grand Prix courses.

Slither through the curves of glamorous Monaco. Blast down the straightaways of Germany. Snarl through the tunnels of

USER GROUP

Update

Mickey McLean

The following list includes updated entries to our annual "Guide to Commodore User Groups," which last appeared in the May and June 1988 issues.

Send typed additions, corrections, and deletions for this list to

COMPUTE! Publications

P.O. Box 5406

Greensboro, NC 27403

Attn: Commodore User Groups

When writing to a user group for information, please remember to enclose a self-addressed envelope with postage that is appropriate for the country to which you're writing.

User Group Notes

The **Commodore Technical User Group (CTUG)** has changed its address to P.O. Box 1497, Costa Mesa, California 92628.

The correct address for the **Suncoast Commodore Club** is P.O. Box 6628, Ozone, Florida 34660-6628.

The **NorthEastern Computer Rappers of Illinois 64-128 of America (NECRIA)** from Lockport, Illinois, has disbanded.

The **Knox Commodore Club** has a new address and a 24-hour bulletin board service. All club correspondence should be sent to P.O. Box 494, Galesburg, Illinois 61402-0494. The club's BBS number is (309) 343-1556.

The **Rainbow International C-64 Users' Group** has a new address: 55 Expressway Village, Niagara Falls, New York 14304.

The **Sanlee Commodore Club** has changed its address to 514 Colonial Drive, Sanford, North Carolina 27330.

other instruction manuals.

Marry into the family.

Now, when it comes to improving your looks, the best way is by marrying into our family.

Because GEOS Text and Graphics Grabbers take your old data (like Word Writer, Paper Clip, Print Shop or Newsroom) and convert it into GEOS format so that your C64 or 128 can deliver beautiful offspring quicker than you can say, "Yeah, but how am I gonna convert all my non-GEOS files?"

And that's pretty darn quick.

So if you'd like your software to relate to each other better, why not move in with us? After all, the last thing you need from your software is family problems.

If your productivity programs don't relate to each other, it's time to consider adopting GEOS,™ the totally integrated software

system that magazines like *Commodore*, *RUN*, *Info* and *Compute!'s*

Gazette have recognized as Commodore's first family of software.

Like any good family, GEOS products work together and grow together. In fact, for every application you add, your capacity for production actually multiplies.

A strong family resemblance.

All GEOS products work and look pretty much the same.

Same menus. Same icons. So once you learn how to point and click a mouse, you pretty much know how geoPublish, geoFile, geoCalc and every other family member works, too. Pretty simple, huh?

Well, that's the idea. GEOS family members freely swap data with one another, too, so importing text and graphics between programs is never a problem. Which means you spend more time creating stuff and less time deciphering all those

All GEOS programs look and work the same way.

Well, that's the idea.

GEOS family members freely swap data with one another, too, so importing text and graphics between programs is never a problem. Which means you spend more time creating stuff and less time deciphering all those

Berkeley Softworks

The brightest minds are working with Berkeley.

THE GEOS FAMILY

GEOS 2.0* \$59.95

The Graphic Environment Operating System for C64's and C128's. With WYSIWYG word processing, spell checking, mail merging, full color painting, fast-loading disk-Turbo and support for all GEOS-compatible applications. GEOS 128 available at \$69.95.

GEO PUBLISH* \$49.95

The desktop publisher with a host of professional features for creating flyers, newsletters, brochures and more.

DESKPACK PLUS* \$29.95

Graphics Grabber for importing art from Print Shop, Newsroom and Print Master; Calendar; Icon Editor; Blackjack; geoDex and geoMerge. Runs in both 40 and 80 column mode.

FONTPACK PLUS* \$29.95

A collection of 53 fonts for use with GEOS applications. Runs in both 40 and 80 column mode.

GEOCALC* \$49.95

Spreadsheet for analyzing all types of numerical data. Available for 128's at \$69.95.

GEOFILE* \$49.95

Database manager that sorts, edits and prioritizes data. Available for 128's at \$69.95.

GEOPROGRAMMER 2.0* \$69.95

An assembly language authoring tool and debugger. Takes full advantage of memory space in both C64's and C128's.

To order, call 1-800-443-1011 Ext. 234 or see your local Commodore dealer.

Smooth Scrolling Windows

Peter M. L. Lottrup and Pablo Garibaldi

***Here's a great new special
effect for BASIC
programmers—pop-up
windows with smooth-
scrolling text. For the
Commodore 64.***

"Smooth Scrolling Windows" takes the work out of adding fine-scrolling windows to your BASIC programs. A single command tells Smooth Scrolling Windows where to place the window, how large to make it, what text to scroll, and how fast to scroll it. You supply the data; Smooth Scrolling Windows does the work.

Typing It In

Program 1, ML-SCROLL, is written in machine language, so you must use "MLX," the machine language entry program found elsewhere in this issue, to enter it. When MLX prompts you, respond with the values given below.

Starting address: \$CC00
Ending address: \$CF9F

Be sure to save a copy of the program with the filename ML-SCROLL before leaving MLX.

Program 2, SCROLL.DEMO, is an example of how to use Smooth Scrolling Windows from within a BASIC program. To prevent typing errors, be sure to use "The Automatic Proofreader" when you enter Program 2.

Scroll Your Own

Using Smooth Scrolling Windows is a two-step process. You must first call the subroutine to set up the

window to be scrolled and then call the routine that actually scrolls it. Both subroutines are called using the SYS command. The call for the setup subroutine must be followed by a series of parameters to define the window and text to scroll. The format is as follows:

SYS 52224,row,col,vlen,hlen,speed,text

Row and *col* are the coordinates of the top left corner of the window. They may contain values in the ranges 0-24 and 0-39, respectively. *Vlen* is the vertical length or height of the window. *Hlen* is the horizontal length or width of the window. *Speed* is a value that specifies how fast the text should be scrolled, and *text* defines the text to be scrolled.

There are several restrictions you must keep in mind. *Vlen* must be a value in the range 1-25. *Hlen* must be in the range 1-40. If you enter a value outside of these ranges, you'll get an ILLEGAL QUANTITY ERROR. A window may contain no more than 128 characters. If *vlen* * *hlen* is greater than 128, you'll get an ILLEGAL QUANTITY ERROR. Finally, the whole window must fit on the screen. If *row* + *vlen* is greater than 25 or if *col* + *hlen* is greater than 40, Smooth Scrolling Windows prints ILLEGAL QUANTITY ERROR.

There are 256 possible speeds for scrolling the text. A value of 0 selects the fastest scroll rate; a value of 255, the slowest. The actual scrolling speed varies according to the size of the window to be scrolled. (Large windows scroll more slowly than small ones.)

The *text* parameter must be a string-array element. *Text* defines the first element of the string array to be scrolled. For example, if you want to scroll the text in an array TX\$() starting with the fifth element, call the setup routine with

SYS 52224,7,12,9,14,0,TX\$(5)

Place a left-arrow character in a string by itself to mark the end of the text to be scrolled. For example, if TX\$(8) is the last string you want printed, TX\$(9) should be "←".

Smooth Scrolling Windows uses the value stored in address 702 to determine how many lines of text to scroll. If it's a value other than 0, that many lines of text will scroll before returning to BASIC. If the

value in 702 is greater than the number of lines of text defined for the window, Smooth Scrolling Windows repeats the text. A value of 0 in 702 causes the text to scroll until a key is pressed.

Two commands turn scrolling on and off. The first, SYS 52227, starts scrolling the windows. The second, SYS 52230, stops the scrolling. By having separate calls for defining and activating the Smooth Scrolling windows, you may place several windows on the screen and then activate them at the same time. The drawback to this method is that all windows scroll the same text at the same speed. You can take advantage of this to achieve a scrolling backdrop effect, as shown in the demo program.

This program offers new effects, like this full-screen scrolling window.

Special Characters

If a string is longer than the current window, it's truncated to fit in the window and the remaining characters are ignored. A string that's shorter than the window width is padded with trailing spaces. If you need to place blank lines in the text, simply enter null strings (" "). Smooth Scrolling Windows will print a line of spaces.

Smooth Scrolling Windows doesn't display reversed characters, cursor-control characters, color characters, and other control characters correctly. Be sure not to include any of these characters in your text.

How It Works

The VIC-II chip has two smooth-scrolling registers, one each for the horizontal and vertical directions. The registers make it easy to scroll the screen pixel by pixel, but they control the whole screen. If you want to scroll only a portion of the screen, you must either write your

own routine to do so or blank the rest of the screen and use the VIC-II's registers to scroll the whole screen.

Smooth Scrolling Windows does not operate on the whole screen. In fact, you define the size of the window in which to scroll the text. Although this window is limited to a maximum of 128 characters, you decide the length and width of the window. The program does not require a hi-res screen or any sprites to operate—the text is scrolled directly on the text screen.

Smooth Scrolling Windows scrolls the text using custom characters. The smooth scrolling routine simply uses the reverse character set to create the window. The smooth scrolling effect is created by redefining these characters on the fly.

To use custom characters, Smooth Scrolling Windows reconfigures the VIC-II to use bank 3 video RAM. Before it starts scrolling the text, Smooth Scrolling Windows copies the text screen to a new text screen at \$C800 in bank 3. If your program accesses the screen directly (with POKES or PEEKs) while the Smooth Scrolling routine is active, it should access the alternate screen at \$C800-\$CBFF. When you deactivate the routine using SYS 52230, the computer is returned to its standard configuration.

Smooth Scrolling Windows deactivates switching between uppercase/graphics and lowercase/uppercase using the SHIFT/Commodore-key combination. To switch character sets, use one of the following commands before you start scrolling:

POKE 52293,208 for uppercase/graphics
POKE 52293,216 for lowercase/uppercase

Also, be careful with RUN-STOP/RESTORE. Pressing RUN-STOP/RESTORE while a window is scrolling restores the text screen to bank 0 but leaves the alternate screen active. To return the text screen to normal, type **POKE 648,4**. (You'll have to type this command blindly.)

Finally, you may want to allow only specific keypresses to exit the smooth-scrolling routine. Whenever a key is detected, Smooth Scrolling Windows exits to BASIC and stores the keypress in address 2.

Why shop at Lyco Computer?

Lyco Computer is one of, if not the largest, and most established firms to provide only quality name brand computer products at prices 30% to 50% below retail. We've set many industry standards, and we are setting the pace for many more in the future. Our standards include: a separate department for customer service; a price guarantee; guaranteed factory fresh merchandise; diverse payment and shipping policies, including a C.O.D. policy which allows customers to have products in their hands before paying anything. Selection places Lyco at the forefront of the industry. Due to our in-stock volume, we cannot advertise all of our products. If you do not see the product you want advertised, call Lyco Marketing toll free.

How do I know I will get the product I need?

Our marketing staff is well-educated in the computer industry. They receive continuous formal training by our manufacturers which enables them to develop and maintain a high degree of expertise on the products they represent. Though our strict guarantee on providing only new merchandise prohibits free trial periods and a guarantee on compatibility, a wealth of knowledge is available to our customers to help with the purchasing decision. As thousands of people every week capitalize on our savings and services, we hope you too, will make Lyco Computer your first choice.

What about warranty or service?

We decided several years ago that a Customer Service Department was needed in the industry. Unfortunately, few of our competitors offer this service. Our Customer Service Department is available at (717) 494-1670 to provide assistance in all warranty matters. Our product line enjoys "name brand recognition," and we back all of our manufacturer's stated warranty terms. Many manufacturers will allow defective products to be exchanged. Before returning any item that appears to be defective, we ask that you call our Customer Service Department to assist you in determining if the product is defective. If the product is determined defective, they will give you a special authorization number and speed processing of your order.

Will you rush an item to me?

Since 1981, we have set the standard in the industry by processing orders within 24 hours — not 4 to 6 weeks. We offer next day air, two day air, standard UPS, and postal international shipping services. Our records show we fill 95% of our orders daily. Temporary shortages are normally filled within 10 days. If an order cannot be filled within 60 days, we refund your money in full, unless you choose to wait for the order and benefit from the price savings. Any time prior to shipment, you may cancel or change the out of stock product by contacting our Customer Service representatives.

How do I order?

Send your order to Lyco Computer, P.O. Box 5088, Jersey Shore, PA, 17740. Or, call 1-800-233-8760 or (717) 494-1030. We provide four payment methods. We have always accepted C.O.D. orders through UPS. Prepaid orders over \$50 are shipped freight-free. For orders under \$50, please add \$3 for freight. Orders prepaid by a certified check or money order are shipped immediately. Personal and company checks require a 4 week waiting period prior to shipping. Visa and Master Card orders are accepted for your convenience, but we cannot pass along the 4% discount offered for cash. Purchase orders are accepted from Educational Institutions. We only charge sales tax on items delivered in Pennsylvania. For APO, FPO, and international orders, please add \$5 plus 3% for priority mail. Advertised prices and availability are subject to change.

Sales: 1-800-233-8760 or 717-494-1030

Hours: Monday through Friday, 9:00 a.m. to 9:00 p.m.

Saturday, 10:00 a.m. to 6:00 p.m.

Customer Service: 717-494-1670

Hours: Monday through Friday, 9:00 a.m. to 5:00 p.m.

Price Guarantee

Since 1981, we have led the industry by continuing to offer the lowest national prices while providing quality service. Many companies have come and gone trying to imitate our quality and service. If by some oversight we do not have the lowest prices advertised on the products you desire, then we would appreciate the opportunity to rectify this oversight.

Turn the page for more great buys!

Deluxe

Eric Slimko

Customize and control user input in your BASIC programs. This versatile routine for the 64 is an excellent replacement for the awkward constraints of the INPUT and GET statements. A demonstration program is included.

You've just put the finishing touches on your latest program. You've spent hours getting your screens just right, and now you're ready to try out your program on someone else. Everything goes well until your tester inadvertently enters a comma or a colon. The 64 defaces the screen with the error message ?EXTRA IGNORED.

"Deluxe Input" solves the problems caused by BASIC's INPUT and GET statements. It prevents users of your programs from cursoring around the screen. It limits input to selected characters, and it offers ways to customize input. Because it's written entirely in machine language, it's very fast.

Typing It In

Deluxe Input is written entirely in machine language. Type it in using "MLX," the machine language entry program found elsewhere in this issue. The MLX prompts, and the values you should enter, are as follows:

Starting address: C000

Ending address: C317

When you've finished typing in the data, be sure to save a copy of Deluxe Input to tape or disk before leaving MLX. Use the name DIN-PUT when you save the program. The demo program expects that name.

Easy Input

Deluxe Input is easy to use. First, load it by typing LOAD "DIN-PUT",8,1. Then, to call the improved input routine, use the following command syntax.

`SYS49152,A$,B$,Limit,RVS,CurSpeed,Bell,InBox,Type`

Deluxe Input won't work in direct mode; you must use it from a program line.

A\$ is a string variable (you may substitute any legal variable name) that will receive the data the user

Get Results

with proven software and books from Abacus.

Super Pascal—Get the fastest and complete Pascal for your computer. **Super Pascal** is a full implementation of standard Pascal. Extensive editor features search, replace, etc. Even add machine language routines with the built-in assembler. Fast graphics library. C-64 version has high-speed DOS for faster access. More than just a compiler—**Super Pascal** is a complete system that gives you programming results.
C-64 \$59.95 C-128 \$59.95

Cadpak—The professional design tool. Enter simple or intricate drawings with the keyboard, lightpen or 1531 mouse. With the flexible object editor you can create libraries of furniture, electronics, etc. as intricate as screen resolution permits. Zoom in to do detailed work. Produce exact scaled output to most printers in inches, feet, etc. Get design results fast with **Cadpak** and your Commodore® computer.
C-64 \$39.95 C-128 \$59.95

Super C—You can now develop software or just learn C on your computer. Easy-to-use and takes full advantage of this versatile language. Produces 6502 machine code and is many times faster than BASIC. Includes full-screen editor (search, replace and block operations), compiler, linker and handbook. Libraries for graphics and advanced math are included. Whether you want to learn C, or program in a serious C environment for your Commodore, **Super C** is the one to buy.
C-64 \$59.95 C-128 \$59.95

BASIC Compiler—Now anyone can make their BASIC programs run faster! Easily converts your programs into fast machine language or speed code. Even speed up programs written in Simon's Basic, Video Basic etc. If your program walks or crawls, give it speed to RUN!
C64 \$39.95 C128 \$59.95

GEOS™ Tricks & Tips—A new book with something for everyone. Contains over 50 tricks and tips that you can use everyday. Converts any word processor file into geoWrite format; edit existing GEOS fonts or create your own; Write in machine language or explore the internals of GEOS. \$16.95

3 TECHNICAL PROGRAMS

Maximize: $Z = 2X_1 + X_2$
 $3X_1 + X_2 \leq 44$
 Subject to: $X_1 < 10$
 $X_1 + X_2 \leq 18$
 $2X_1 + 5X_2 \leq 60$

same problem). Objective (Z function) may be maximized or minimized. Computer displays solution (in example at left, $Z=31$, $X_1=13$, $X_2=5$). Initial and final tableaux. Special command for easy entry of sparse constraints.

Linear Programmer

Solves linear programming problems of up to 50 variables and 35 constraints. Systems may be restricted by constraints of equality, less than or greater than, (different types may appear in the

Analytical Geometry in 3 Dimensions

Solves numerical geometry problems like those found in college level analytical geometry text books. After entering points, lines, planes and vectors, users may then calculate. Vector cross, dot, triple and scalar products. $A \times B$, $A \cdot B$, $A \times B \cdot C$, s.a. find the angle between 2 lines, vectors or planes; find intersection of 3 planes, 2 planes, line and a plane; find a plane through 3 points, a point and a line, point and normal point and parallel plane, or perform 18 other geometric calculations. Entries made and answers displayed in users choice of several methods, including symmetric equation, parametric equation, multiple points, direction and magnitude. (NOT A GRAPHICS PROGRAM)

Arcade adventure at its finest...

Fast-paced, exciting combat demands the use of all your wits and endurance to best a world teeming with assassins, wizards and monsters. Experience captivating graphics of an unprecedented calibre. Relentless opponents will hone your combat skills to a razor's edge. A simple yet powerful menu and icon interface provides effortless interaction with the world and its people, while the incredibly smooth

animation presents a continuous panorama of action and adventure.

To get your copy of Times of Lore, either
1) visit your local retailer,

2) call 1-800-999-4939 8am to 5pm EST to order by VISA/MC, or

3) mail check (U.S. \$) or VISA/MC#, cardholder name and expiration date to Origin. All versions \$39.95 plus \$2.50 shipping/handling. Allow 1-2 weeks for delivery

Try it! A demo disk of Times of Lore is now available for the Commodore 64/128K. Send \$2.50 to Origin for yours and credit it towards a direct order purchase.

Also available for the IBM and Apple II series.

Fantasy role- playing at its best!

Astonishing realism is yours through scores of unique characters and sophisticated conversations. Immerse yourself in the sights and sounds

of an ancient world embroiled in turmoil—the disappearance of the king and his young child—the struggle for control of the realm. The stakes are high; your role as the hero-for-hire requires all the courage and savvy you can muster. Your quest for truth will teach you much of the distinction between appearances and reality. Magic and intrigue combined with finely crafted game-play bring you the best of fantasy in...

Screens shown are for the Commodore

...Times of Lore

- Fast-paced combat action
- Dynamic conversations
- Compelling plot

Origin Systems, Inc.
136 Harvey Road, Building B., Londonderry, NH, 03053

Times of Lore is a trademark of Origin Systems, Inc.

Earl Kanady

Animation is easy with this hi-res graphics program for the 128. A disk drive is required.

Page flipping is a technique that has been used to bring cartoon characters to life for decades. You can try it out with a pencil and a pad of paper. Simply draw stick figures on separate sheets of paper, changing each figure slightly from the previous one. Then hold the sheets by one edge and flip through the pages. Instant animation!

"128 Animator" is a page-flipping program for the 128 that allows you to load as many as six high-resolution screens at one time. Once they're in memory, 128 Animator can flip through the screens, creating the illusion of movement. It can also display the screens individually so that you can examine each frame.

You can design screens using your favorite graphics program and put them into motion using 128 Animator. It can display hi-res screens drawn with most graphics programs for either the 64 or the 128. You can

also create screens with the included screen-generator program.

Typing It In

Program 1, "128 Animator," is written in BASIC. To prevent typing errors while entering it, be sure to use "The Automatic Proofreader," located elsewhere in this issue. When you have entered Program 1, save a copy to disk with the filename 128ANIM.

Program 2, "Screen Generator," is also written in BASIC. Enter it using the Automatic Proofreader and save a copy to disk.

Getting Started

When you run 128 Animator, you are prompted for the filenames of the screens that you want to display. You must enter at least two filenames and no more than six. After you've entered the filenames, 128 Animator asks you to verify that the filenames have been en-

tered correctly. Be sure that the files that you enter are on the disk in drive 8. If 128 Animator is unable to find a file, it stops with the message FILE NOT FOUND ERROR.

Once the files are loaded, 128 Animator displays the main menu. You can choose among options to view your sequence automatically, view it manually, choose a new set of files, or exit the program.

If you decide to view the screens automatically, 128 Animator begins flipping through them in sequence. When you first run the program, it flips through the screens as quickly as possible. Slow down the page flipping by pressing the - (minus) key or SHIFT-+. Press + or SHIFT-+ to speed up the page flipping. Press RETURN to go to the main menu.

In manual-view mode, 128 Animator prompts you for the number of the screen that you want to view. Press the number key cor-

Evolution (ev' e-lōō' shen) n. The process of growing or developing to a higher state.

INTRODUCING THE NEXT STEP IN CARTRIDGE EVOLUTION!

It started with... SUPER SNAPSHOT V2

"...probably the most advanced on the market..."

Morton Kevelson, Ahoy! Nov '87

"...useful...fun...exceptional quality..."

David Martin, RUN Dec '87

"All in all, I think this is the best of the bunch." *Tim Sickbert, INFO Jan '88*

followed by... SUPER SNAPSHOT V3

"Snapshot + Slideshow = a dynamic duo!" *Sue Albert, INFO May/June '88*

"...one of the most technically advanced...packed with useful features..."

Art Hunkins, Gazette June '88

"...my personal favorite is Super Snapshot."

Morton Kevelson, RUN Sept '88

"Hats off to LMS Technologies. They make a good product."

John Christensen, Input

"The monitor that made me give up all the others."

Lawrence Hiler, Chip Level Designs (formerly of Basement Boys Software)

"...indispensable, can't live without it."

Bob Mills, programmer of Renegade

...and now we bring you SUPER SNAPSHOT V4

With even MORE of the power-packed utilities you've come to expect from the makers of the most popular utility cartridge in North America!

Available Nov. '88

Super Snapshot is used by INFO in producing their magazine.

► Version 1, 2, and 3 owners may upgrade to version 4 for \$20.00
CALL US! ► C128 disable switch, add \$8.00 ► 10-day, money back guarantee.

ALSO AVAILABLE: SUPER SNAPSHOT SLIDESHOW CREATOR

Powerful options within this package allow you to create slideshows using Snapshotted screens to produce dazzling effects in eye-catching presentations. Options include: displays that can fade in/out, shutter on/off, pop on/off, or slide on/off. Use any of 10 different fonts to display your personalized, scrolling message -ANYWHERE ON THE SCREEN! Slideshow can even be incorporated into your BASIC and ML programs.

"Slideshow and Snapshot are a power partnership."

Sue Albert, INFO May/June '88

"...a gem of a companion: Slideshow Creator... well-designed..."

Art Hunkins, Compute!'s Gazette June '88

Super Snapshot V4 - \$64.95
Super Snapshot Slideshow Creator
- only \$14.95

EVOLUTION OF FEATURES

► Works with all 64(C), 128(D), 1541(C), 1571, 1581 ► Totally transparent when disabled ► Turbo load and save (1541, 1571, 1581): 15x faster loading, 7x faster saving; 25x faster loading with TURBO'25
► Super DOS wedge: all standard commands PLUS extras. Supports devices 8, 9, 10, and 11 ► Function keys: pre-programmed and re-programmable (now 13 f-keys)
► Archiver: saves all memory-resident programs to disk as 1 or 2 autobooting files ► Screen Copy: dump to disk in popular graphic program formats or to printer in 3 sizes (print sprites, more printers supported). Dumps BOTH multi-colour and hi-res screens (STILL the only utility cartridge of it's kind to do both!) ► M/L monitor: DOES NOT CORRUPT MEMORY! Interrupt, examine, modify, and resume a running program. All standard commands PLUS bank-switching, bi-directional scrolling, IO command, track and sector editor, ASCII hunt, and drive monitor ► Sprite disable and extended life feature. Now includes sprite re-enable (unique to SS V4) ► Sprite monitor and full-featured sprite editor ► Fast disk copier: 1 or 2 drives; supports 1541, 1571, and 1581 ► Basic Aids: append, auto, autodata, menu, merge, old, pron, proff, tron, troff, renum ► File Management System: fast file copier (1541, 1571, 1581 -including partitions, 1 or 2 drives, any combination); scratch, rename, PLUS expert mode ► Free Kracker Jax 100+ parameter disk including nibbler (for those tough back-ups).

LMS
TECHNOLOGIES

responding to the number of the screen you wish to see. You can view a different screen by pressing the corresponding number key. Press RETURN to return to the main menu.

Creating Sequences

128 Animator can display any high-resolution graphics file that is created on the 64 or 128. The only restriction that 128 Animator imposes is that the color data and bitmap data be saved together. *Doodle* is an example of a program that saves the color and bitmap data together. (If the picture file occupies 36 or 37 blocks on disk, then the color and picture have been saved together.)

If the bitmap and color data have been saved as separate files, you may be able to combine them by loading each separately and then saving them as a single file. This can be done with the following sequence of commands:

```
BLOAD "color filename",P7168
BLOAD "bitmap filename",P8192
BSAVE "new filename",P7168 TO P16384
```

FlexiDraw screens, with color, are saved in this format.

To load single-color hi-res

screens such as those produced by *ComputerEyes* or *FlexiDraw* without color, you must set color 0 and color 1, load the bitmap, and then resave the color and bitmap as one file:

```
COLOR 0,1:COLOR1,2
BLOAD "bitmap filename",P8192
BSAVE "new filename",P7168 TO P16384
```

Quick Draw

You can use Program 2, Screen Generator, to draw simple animated sequences. It generates six graphics screens and saves them to disk with the filenames PIC1-PIC6. Before you run Program 2, be sure that the disk in drive 8 has at least 222 blocks free.

By making minor changes to Program 2, you can create different animated sequences. Try making these changes:

```
60 C$=RIGHT$(STR$(C),1):BSAVE"PICA
"+C$,P7168 TO P16384
70 L=L-101:H=H-60:C=C+1:IFC<=
6THEN40
```

Or try these:

```
30 X=159:Y=99:L=86:H=50:S=0:E=
360:N=0:I=60:C=1
60 C$=RIGHT$(STR$(C),1):BSAVE
"PICB"+C$,P7168 TO P16384
70 L=L-101:H=H-70:C=C+1:IFC<=
6THEN40
```

How It Works

The VIC-II chip has the ability to address four video banks in both of the 128's RAM banks. This means that there are a total of eight video banks available. However, because the MMU registers occupy memory above 65280 in both RAM banks, using video bank 3 is not very practical. This leaves six video banks that are easily accessible.

These six available video banks can be used by POKEing two memory locations, 54534 and 56576. Location 54534, the RAM-configuration register, switches the 128 between RAM 0 and RAM 1. Location 56576, the port A I/O data register, switches among the four video banks in each RAM bank. By POKEing specific values into these two locations, you can switch to any of the six screen areas very quickly.

128 Animator loads six hi-res graphics screens, one into each of the accessible video banks. After the files are loaded, displaying any of the screens is simply a matter of POKEing the right values into the two registers.

See program listings on page 103. ☐

Also!

ThunderChopper, available for the Commodore 64/128 and Apple II computers. Coming soon, a great new IBM version!

Smart

Disassembler

If you've ever disassembled a machine language program, you've probably seen statements such as JSR \$C738. Wouldn't it be better to see JSR DISPLAY instead?

"Smart Disassembler" is a RAM-based disassembler that replaces all addresses in JMP and JSR commands with meaningful labels whenever possible. The program can send disassembly to the screen or printer, and it can also disassemble machine language programs located under the BASIC or Kernal ROM.

Getting Started

Smart Disassembler is written entirely in BASIC. Using "The Automatic Proofreader" program found elsewhere in this issue, carefully type in Smart Disassembler and save it to tape or disk before attempting to run it.

To use Smart Disassembler, first load the machine language (ML) program you'd like to disassemble; then load and run Smart Disassembler. Enter the ML program's starting address in decimal. Next, enter an address where you would like the disassembly to stop. If you don't want Smart Disassembler to stop automatically, just press RETURN.

Next, the main menu appears. Use the function keys to make a selection. Press f1 to begin the disassembly or f8 to exit Smart Disassembler. Press f3 to toggle the use of subroutine labels on and off, f5 to switch between decimal and hexadecimal output, and f7 to enable or disable output to the printer. The f6 key toggles the ability to disassemble the RAM under ROM. Set this option to YES if the program you wish to disassemble resides in RAM under the BASIC or Kernal ROM. If you set this option to NO, you can

Louis Giglio

Unravel the secrets of the pros. "Smart Disassembler" produces meaningful source code from cryptic numbers. For the 64.

disassemble your 64's operating system and even BASIC itself.

The disassembly may be paused by pressing any key. To resume disassembly, press the space bar. Pressing f1 instead displays the main menu, allowing you to change any of the initial settings. Press f1 to resume the disassembly.

Memory Conflicts

It's possible that the code you want to disassemble resides in BASIC's memory (2048-40959) or in memory locations 820-840. If this is the case, Smart Disassembler will overwrite and destroy the ML program. There are several ways to prevent this from happening.

If the program resides high in BASIC's memory, you can lower the top of BASIC by typing

```
H=INT(AD/256):POKE 56,H:POKE 55,(AD-256*H):CLR
```

where AD is the address of the new top of BASIC (make sure AD is less than the starting address of the ML program). Enter this command in direct mode before you load and run Smart Disassembler.

Similarly, if the program resides low in BASIC's memory, you can raise the bottom of BASIC by

typing

```
H=INT(AD/256):POKE 44,H:POKE 43,(AD-256*H):POKE AD-1,0:NEW
```

where AD is the address of the new bottom of BASIC (make sure AD is greater than the ending address of the ML program). Enter this command in direct mode before you load and run Smart Disassembler.

Smart Disassembler stores a small ML subroutine at 820-840. If your ML program resides in this area, Smart Disassembler's subroutine must be relocated. Change the value of the variable ML in line 30 to any location with at least 20 bytes of unused RAM.

Customizing the Program

You may include your own address labels by adding DATA statements to Smart Disassembler and changing the value of the variable NL in line 20. Note that the 39 Kernal ROM routine labels have already been entered, so there is no need to add them.

For example, if you know a subroutine at location 50000 is a string input routine, you might want to label it as INSTRING. Enter the label and address (in decimal) as a data statement at the end of Smart Disassembler. For this example, you type

```
2000 DATA INSTRING,50000
```

Add the number of additional address labels to the variable NL. In this case, one address label has been added, so line 20 should be reentered as

```
20 NL=40
```

(NL was 39 before INSTRING was added.) Thereafter, all JSR 50000 or JMP 50000 statements will be replaced by JSR INSTRING and JMP INSTRING, respectively.

See program listing on page 102.

2400 A.D.

Exciting Sci-Fi Role-Playing for only \$29.95

Every last member of the resistance has either been captured or is closely monitored by the robot patrol. As a new inhabitant of XK-120, you have no police record. You have a chance to locate the central control console and deactivate the robot control system. Not a good chance, but a chance.

This science fiction role-playing game was created by Chuck Bueche, the author of AUTODUEL®. The fast paced action all takes place in an enclosed high-tech city of many levels.

As you hurry along extensive air-jet subways and slidewalks, you'll need to solve complex mazes and other intriguing puzzles. The challenges are non-stop and full of surprises.

On your mission, you'll face some 16 types of animated robots. Battle them with weapons like phasers, blasters and time bombs.

Confuse them by creating a duplicate image of yourself with the unique holoprojector. Or re-program them to work for you by mastering the ingenious Directive Override option.

Realistic action allows you to move or climb over objects. Superb graphics on Commodore 64/128!

In 2400 A.D. you step far into the future. But beware. Each step you take could be your last.

Available for: IBM-PC / Tandy / compatibles, Apple II Series, and Commodore 64/128. To get your copy, (1) visit your local retailer, (2) call 1-800-999-4939 8am to 5pm EST to order by VISA/MC, or (3) mail check (U.S. \$) or VISA/MC #, cardholder name and exp. date to ORIGIN 136-B Harvey Road, Londonderry, NH 03053. Price: \$29.95 plus \$2.50 shipping and handling. Allow 1-2 week for delivery.

DATEL COMPUTERS

KEEP IT SIMPLE!

FINAL CARTRIDGE III

- Give your 64/128 an "Amiga Look Alike" environment. Pull down windows/ icons.
- PLUMB a huge range of utilities all built into this one cartridge - including:
 - Freezer option to freeze and copy most any memory resident program.
 - Full machine code monitor with all the usual commands and more.
 - Unique picture print dump - compressed/ enlarged.
 - Plus other effects.
 - Fast loader - loads commercial software at up to 15 times normal speed.
 - Range of disk copy type tools - disk, calculator, desktop etc. etc.
 - Final Cartridge 3 is a superb utilities cartridge with an added bonus of a freezer function.

ONLY \$54.99

TOOLKIT IV

The ultimate disk toolkit for the 1540/1541

- A disk toolkit is an absolute must for the serious disk hacker. Toolkit IV has more features than most for less.
- DISK DOCTOR V2 - Read and write any track and sector including extra and remastered tracks. Repair damaged sectors. Look underneath read errors.
- HEADER/GAP EDITOR - Decodes and displays ALL header information including off bytes and header gap. Rewrite the entire header and header gap. Remaster sectors. Also edit any sector tail gap.
- DISK LOOK - Sort directory. Recover lost files. Display file start/end addresses. Disassemble any file program directly from the disk to SCREEN or PRINTER including undocumented opcodes. Run Run. Much, much more.
- FILE COMPACTOR - Compress programs by up to 50%. Saves disk space. Compressed programs run as normal.
- FAST DISK COPY - Copy an entire disk in 2 minutes or less using single 1541.
- FAST FILE COPY - Selective file copy. Works at up to 6 times normal speed.
- FORMATTER - 10 second format an entire disk or format any individual track or half track 0 to 41. Redefine any of 30 parameters to create or recreate unique disk formats.
- ERROR EDIT - Quickly find and recreate all read errors including extra and remastered tracks or sectors and half tracks from 0 to 41. Even recreates data under errors and allows you to redefine any parameters.

ONLY \$14.99

DIGITAL SOUND SAMPLER

- The new sampler allows you to record any sound digitally into memory and then replay it with astounding effects.
- Playback forwards/backwards with echo/reverb/ring modulation.
- Pull 8 bit D to A ADC conversion.
- Midi compatible with suitable Midi interface. (see Ad)
- Pull sound editing and real time effects menu with waveforms.
- Powerful sequence plus load/save functions.
- Line In/Midi In/Line Out/Feedback controls.
- Complete hardware/software package.

ONLY \$89.99

MIDI 64

- Full specification MIDI interface at a realistic Price.
- MIDI IN MIDI OUT MIDI THRU
- Compatible with most leading MIDI software.

ONLY \$49.99

TURBO ROM II

Turbo Rom II is a replacement for the actual kernel inside your 64. It provides superfast load/save routines.

- Loads/Saves most programs at 5-6 times normal speed.
- Improved DOS support including 10 sec format.
- Programmed function keys: load, directory, old, etc.
- Return to normal kernel at flick of a switch.
- PCOPY - 250 block file copier.
- FLOAD - special I/O loader.
- Plus lots more.
- Fitted in minutes - no soldering usually required. (On some 64's the old ROM may have been desoldered).

ONLY \$24.99

256K SUPEROM EXPANDER

- Now you can select from any of 8 32K EPROMs
- 8 sockets to accept upto a 32K EPROM in each.
- On board operating system - no programs to load.
- Program your own EPROMs using our EPROM programmer.
- No need to have loads of cartridges - just make a selection from the Superom menu.
- Directory of utilities on power up.
- Fully menu driven on power up.
- Select any slot under software controls.
- Unique EPROM generator feature will take your own programs - basic or m/c and turn them into autostart EPROMs. (EPROM burner required).
- Accepts 2764/27128/27256 EPROMs.

ONLY \$49.99

EPROMMER 64™

- A top quality, easy to use EPROM programmer for the 64/128.
- Fully menu driven software/hardware package makes programming/reading/verifying/copying EPROM's simplicity itself.
- Will program 27256 chips. 12.5, 21 or 25 volts.
- Fits into user port for maximum compatibility with cartridges/Superom Board etc.
- Full feature system - all functions covered including device check/verify.
- We believe Eprommer 64 is the most comprehensive, most friendly and best value for money programmer available for the 64/128.
- Ideal companion for Superom Board. Cartridge development system, our kernel expanders or indeed any EPROM base project.
- Comes complete with instructions - plus the cartridge handbook.

ONLY \$69.99 COMPLETE

DEEP SCAN BURST NIBBLER™

- The most powerful disk nibbler available anywhere, at any price!
- Burst Nibbler is actually a two part system - a software package and a parallel cable to connect the 1541/1570/1571 to 64/128 (state type).
- What gives Burst Nibbler its power? Conventional nibblers have to decode the data from the disk before it can transfer it using the serial bus - when non standard data is encountered they are beat. Burst Nibbler transfers data as raw GCR code via the parallel cable without the need to decode it so you get a perfect copy of the original.
- Will nibble upto 41 tracks. Copy a whole disk in under 2 minutes. Full instructions.
- Regular updates - we always ship the latest. Fitted in minutes - no soldering usually required.
- Full or 1/2 tracks. No need to buy parallel cable if you have Professional DOS etc.
- Cable has throughbus extension for other add ons.

ONLY \$39.99 COMPLETE

SOFTWARE ONLY \$19.99 CABLE ONLY \$19.99
BURST NIBBLER PARAMETER DISK

- Burst Nibbler is the most powerful Nibbler around - but even the best can be better. This disk contains dozens of parameters specially written for the protection schemes impossible to Nibble. These are mainly "Vmax" and "RapidLock" and include titles such as "Deliver of the Crown", "Giant" etc. Regularly updated to include any new titles. This disk is by no means a necessity - the standard Burst Nibbler will copy 90% of software as is - if you want to go to the limit, this is the product for you!

ONLY \$14.99

SMART CART

- NOW YOU CAN HAVE A 32K CARTRIDGE THAT YOU PROGRAM LIKE RAM THEN ACTS LIKE ROM!
- 32K pseudo ROM - battery backed to last up to 2 years (lithium battery).
- Simply load the program you require - then flick the switch. The cartridge then acts like a ROM cartridge and can even be removed.
- Make your own cartridges - even auto start types, without the need for an Eprom burner.
- Can be switched in/out via software.
- 1/02 slot open for special programming techniques.

ONLY \$59.99

DUPLIKATOR

- Duplicator is a mass disk copier ideal for clubs, user groups etc.
- Comes with 256K on board RAM and it's own built-in operating system - no software to load.
- Makes entire backups in 8 seconds!!
- Multiple copies from one original - over 250 disks per hour. Full verify option.
- Copies upto 40 tracks and can cope with standard disk errors 21-29.
- The most price effective method of mass duplication available.

ONLY \$189.99

EXTERNAL 3.5" DISK DRIVE

- Slime extra low profile unit - only 6" long!
- Top quality NEC drive mechanism. Throughport allows daisy chaining other drives.
- A superbly styled case finished in amiga colours.
- Fully compatible.
- 1 meg unfformatted capacity.
- Good length cable for positioning on your desk etc.
- Complete - no more to buy.

ONLY \$169.99 SINGLE
ONLY \$299.99 DUAL

MIDIMASTER

- Full Midi Interface for A500/2000/1000 (Please state model).

3430 E. TROPICANA AVENUE, UNIT #67, LAS VEGAS, NV 89121

TOTAL BACK UP POWER TAKES A QUANTUM LEAP!

ACTION REPLAY IV THE ULTIMATE UTILITIES/BACK-UP CARTRIDGE FOR THE 64/128

• Action Replay allows you to Freeze the action of any memory Resident Program and make a complete back-up to disk or tape – but that's not all . . . Just compare these features

☐ Simple Operation: Just press the button at any point and make a complete backup of any* memory resident program to tape or disk.

☐ Turbo Reload: All backups reload completely independently of the cartridge at Turbo speed.

☐ Sprite Monitor: View the Sprite set from the frozen program – save the Sprite – transfer Sprites from one game to another. Wipe out Sprites, view the animation on screen. Create custom programs.

☐ Sprite Killer: Effective on most programs – make yourself invincible. Disable Sprite/Sprite/Background collisions.

☐ Unique Picture Save: Freeze and save any Hires Screen to tape or disk. Saved in Koala, Blazing Paddles Format.

ONLY
\$59.99

**POWERFUL DESIGN WITH
ON BOARD LSI LOGIC PROCESSOR
CHIP PLUS 40K OF ON BOARD
ROM/RAM!**

☐ Compactor: Efficient compacting techniques – 3 programs per disk side – 6 programs if you use both sides.
☐ Single File: All programs saved as a single file for maximum compatibility.

☐ Utility Commands: A host of additional commands: Backup, Append, Old, Delete, Linesave, Printer, User.

☐ Screen Dump: Print out any Screen to Host or Printers. 16 Gray Scales, Double size print options.

☐ Unstoppable Reset: Reset button to Retrieve System and Reset even so called Unstoppable Programs

☐ Fully Compatible: Works with 1541/C, 1581, 1571 and Datacassette with C64,128, 128D (in 64 Mode)

☐ Compatible: With Fast DOS and Turbo Rom Systems

☐ Disk Utilities: Fast Format, Directory, List, Run and many other key commands are operated by Function Keys

☐ Unique Restart: Remember all of these utilities are available at one time from an integrated operating system. A running programme can be Frozen to enter any Utility and the program is restarted at the touch of a key – without corruption.

LSI Logic Processor: This is where Action Replay IV gets it's power. A special custom LSI chip designed to process the logic necessary for this unmatched Freeze/Restart power. No other cartridge has this power!

UNIQUE FEATURES:

☐ WARP 25

Loads 80K in under 5 seconds!!

It's true action replay feature "Warp 25" the world's fastest disk serial Turbo. A typical backup will reload in under 5 seconds.

- No additional hardware required
- No special formats
- Super reliable
- Remember this is not a system where time have to be converted – with action replay you simply save directly into Warp 25 status – reload in seconds
- Backup all your existing programs to load at unbelievable speed!!
- Because AM4 has on board ram it can also load commercial disks directly at 25 times speed.
- This is unique to Action Replay!
- Warp Save/Load Available straight from Basic.

☐ Plus unique Code Cracker Monitor

- Freeze any program and enter a full machine code monitor
- Full Monitor Features – Disassemble, Hex, Find, Jump, Compare, Replace, Two Way Scroll, Full Disk Load/Save, Printer Support etc. In fact all usual monitor commands plus a few others
- Because of Action Replay's on Board Ram the Frozen program can be looked at in its ENTIRETY. – In its Frozen state that means Video Ram, Zero Page etc. and remember you see the code in its Frozen state not in a Reset state as with competitors products.
- Restart the program at any point.
- No corruption
- An absolute must for the program Hacker – make changes and see your result instantly!

☐ Action Replay Graphics Support Disk

It help take advantage of action replay's unique power to freeze any screen and save it into your favorite graphics package we have prepared a suite of graphic support facilities.

- Screen Viewer View screens in a "slide show" sequence – Joystick control simple to use.
- Message Maker Add scrolling messages to your saved screens with music, very easy to use.
- ProSprite A full sprite editor, modify/save/load feature, full edit facilities.
- Zoom Lens Explode sections of any saved screen to full size including Border – Superb fun and very useful.

ONLY **\$19.99**

CENTRONICS PRINTER LEAD

- ☐ Take full advantage of Action Replay or Final Cartridge screen dump features with this centronics lead.
- ☐ Connects user port to any full size Epson compatible printer.

ONLY **\$18.99**

☐ SUPERCRUNCHER

- ☐ A utility to turn your Action Replay into a super powerful program compactor. Reduce programs by up to 50%! Save disk space and loading times. Can even further compact programs already crunched by Action Replay's own compactor.

ONLY **\$9.99**

NOW WITH RAMLOADER™
☐ Not only can Action Replay load your backups at 25 times normal speed. Now with the new RAMLOADER™ feature you can also load most of your commercial originals also at 25 times speed!
☐ Makes use of our special LSI logic processor and that of selected RAM Action Replay now offers the world's fastest Turbo.

HANDY FILER

Walter L. Smith, Jr.

Keep track of your baseball cards, expenses, computer magazines—anything at all—with "Handy Filer," an easy-to-use file manager that allows you to enter, sort, and print your data. Its clear menus and prompts make the program a joy to use. For the 64 with a disk drive.

Database managers are complex and powerful tools which can be used to organize many different types of data. While "Handy Filer" is not a full-fledged database manager, it is flexible enough and powerful enough for many common data-management tasks. Its sorting, searching, and printing routines make it ideal for storing and retrieving many kinds of information.

File managers usually divide data into small, manageable groups called *records*. Records are further divided into *fields*. A good analogy is a recipe file. The box where you keep your recipe cards is similar to your data file, each card is like a record within the file, and each line on a card corresponds to a field within a record.

Handy Filer divides data into records that can be up to 255 characters long. Each record is further subdivided into fields. Fields can have a maximum length of 60 characters. Each record may contain anywhere from 1 to 255 fields. Your data file may contain as many records as will fit into memory.

Typing It In

Handy Filer is written entirely in machine language, so enter the program using the "MLX" machine language entry program found elsewhere in this issue. When MLX prompts you, respond with the values given below.

Starting address: \$0801
Ending address: \$1B70

Be sure to save a copy of Handy Filer to disk before you leave MLX. Although Handy Filer is written in machine language, you can load, run, and save it as if it were a BASIC program.

Creating a File

Getting started with Handy Filer is easy; simply load and run the program. You'll see the main menu with the following options:

- (L) LOAD DISK FILE
- (N) DEFINE NEW RECORD
- (B) BEEP OFF
- (Q) QUIT PROGRAM

The first time you run Handy Filer, you won't have any files on the

disk, so you must create a new file with the DEFINE NEW RECORD option. Designing the format for your records is the most important step in using Handy Filer. You must decide how many fields you want to divide your data into, how long each field will be, and whether the field will be left- or right-justified.

You should keep a few things in mind while designing your record format:

- The first field of a record is considered the key field and must always contain data. The other fields may be left blank.
- Think of how you might want to sort and search for data within your records when you decide which fields to use. If you're making an address file and think you may want to sort it by zip code, be sure to assign the zip code to a separate field. If sorting by zip code isn't important to you, then you may want to put it in a field with the city and state.
- A field must be long enough to contain the longest entry expected, but if it's too long, memory is

MODEM PROMOTION

The Great Communicator

THE DIRECT-CONNECT HAYES® AND COMMODORE® 1670
COMPATIBLE 1200 BAUD MODEM FOR ONLY \$74.95

Everything from Electronic Mail (E-mail) to stock quotes and huge databases of every imaginable type is now on line to the small computer owner. You can even send and receive messages anywhere in the world. All you need is a telephone and a modem which allows your computer to communicate with others.

Almost all modems (and services) are set up to communicate in one or more of three speeds; 300, 1200 and 2400 Baud. Most computer users prefer 1200 Baud. (1200 Baud is about 4 times as fast as 300 which means you spend about 1/4 the time and money getting the data you want and more time enjoying it.)

2400's are great (but quite expensive). Most users can't justify the cost difference unless they do a large amount of modem work with a service that can handle 2400 baud.

You will also notice a few very cheap 1200s on the market at "too good to be true prices." They are. The reason is that they are usually foreign built and not truly Hayes® and Commodore 1670® compatible therefore not usable in all situations and with all services.

What is Hayes® compatibility? It's the industry standard and about all modem manufacturers have adopted the "AT" (Hayes) command set. Beware of those who don't. Virtually all software being written now uses Hayes commands. Be sure the modem you buy is truly Hayes® and Commodore 1670® compatible therefore usable in all situations and with all services.

Let's compare Minimodem-C™ with the 1670®, Avatec-e and Volks 6480®.

Comparison of	Minimodem-C™	vs. 1670®	vs. Avatec-e	vs. Volks 6480®
Hayes® Compatibility?	100%	Subset Only	Subset Only	None
Commodore direct Connect?	Yes	Yes	No	Yes
Number of Status Indicators	7	0	8	0
Busy Detect?	Yes	No	No	No
DTR Signal Support?	Yes	No	Yes	No
High Speed Detect Line?	Yes	No	No	No
Number of DIP Switches	8	3	8	0
Number of Status Registers	16	3	16	0
Guarantee	1 yr.	90 days	2 yrs.	5 yrs.

Now you have the FACTS to make an informed decision.

What do you get for \$74.95? Everything! You don't need to worry about cables, compatibility or anything else! The Arotek Minimodem-C™ plugs directly into your Commodore C-64, C-64C or C-128 USER port. It is unique in that it has two separate (switchable) emulation modes (Hayes and Commodore 1670®) to make it compatible with ALL available software. The Minimodem-C™ is a full feature, 300/1200 Baud modem with Auto Answer, Auto Dial, Touch-Tone or rotary dialing, has status indicators and a built-in speaker. Just plug it into your computer and standard phone jack with the attached cable. Minimodem-C™ is supplied with "Multiterm" 64 and 128, and a free trial subscription to Compuserve.

Do you have more than one computer or do you plan to get another computer? We have your solution. Simply order our new Com-Modem™ adapter (#5100) along with the standard Arotek Minimodem-H™ which you can use with any computer that has a RS-232 serial port as well as with your Commodore. Arotek Minimodems™ are tiny. Only 4 3/4" long, 2 3/4" wide and 3/4" high. Our highly integrated, state-of-the-art circuitry makes this modem a Best Buy.

Built with pride in the USA and fully guaranteed for 1 year. Order yours today!

NO RISK POLICY

Try any Arotek product for two weeks. If you are not satisfied, call us then send it back for a prompt refund.

NOW FOR THE BEST PART, THE PRICE!

Aprospand-64™ Gives your Commodore 64 or 128 full expandability! This superbly designed expansion module plugs into the expansion port and gives you four switchable expansion connectors—plus fuse protection—plus a reset button! Before you buy an expander, be sure that it has a fuse to protect your computer and that you can activate your cartridges in any combination allowed by the cartridges.

The Original

Fully C-128 Compatible

ONLY \$29.95 + S&H

Order #5064

UNIVERSAL RS-232 INTERFACE

with Commodore USER Port expansion. ONLY \$39.95 + S&H

Now, you can connect and communicate with any of the popular RS-232 peripherals using your Commodore USER Port. This superb expander opens a whole new world to your Commodore computer's capabilities. You can now connect to printers, modems and any other RS-232 device. If you already have something that connects to the USER port, don't worry because the port is duplicated on the outside edge of the interface. Comes complete with sample driver program listings. Compatible with all Commodore home computers with a USER port. 1-year warranty. Order #5232.

NEW! "COM-MODEM" ADAPTER — Used only with any Hayes® compatible modem with DB-25 connector through your USER port. You can make it emulate a 1670 too, or turn it off entirely. Can be used with our other USER port equipment such as "USER EXTENDER" (#5250) or "UNIVERSAL RS-232 INTERFACE" (#5232).

wasted. Your whole file must fit into memory, so choose field sizes wisely. Also, remember that your whole record may be no more than 255 characters long.

- Justification not only affects how a field will look on the screen, but also how it will be sorted. Alphabetic fields must be left-justified in order for them to sort correctly. Numeric fields should be right-justified.

After you've decided how you want to structure your records, enter the format into Handy Filer. When you choose the DEFINE NEW RECORD option, Handy Filer prompts you for the title, length, and justification of each field in your record. If you try to define a field that is too long or try to define a field that will make the record too long, Handy Filer prints a warning and requests that you reenter the field length. After you've entered all your fields, press RETURN when prompted for the title of the next field.

Put your 64 to work with this fast and flexible database manager.

Entering Data

Once your record has been defined, a new option, (A) ADD RECORD, appears on the main menu. The ADD RECORD option lets you add data to your file.

When you choose the ADD RECORD option, Handy Filer prompts you for the data for each field of the record. Handy Filer indicates the length of the field by underlining it. If a field isn't underlined, it extends to the end of the current screen line. If you enter data beyond the end of the field, Handy Filer prints a warning and requests that you reenter the data. Handy Filer also asks whether you want to make changes to the record before it's saved. Just press RETURN if everything is OK. The re-

cord will be stored, and Handy Filer will prompt you for the next one. Press RETURN at the prompt for the first field to stop entering records.

Editing a File

When you return to the main menu this time, several new options are displayed:

- (A) ADD RECORD
- (E) EDIT/VIEW FILE
- (L) LOAD DISK FILE
- (N) DEFINE NEW RECORD
- (P) PRINT FILE
- (H) HUNT FOR RECORD
- (F) SAVE FILE
- (D) DELETE FILE
- (V) VALIDATE DISK
- (S) SORT FILE
- (X) CHANGE RECORD FORMAT
- (B) BEEP OFF
- (Q) QUIT PROGRAM

The first new option, EDIT/VIEW FILE, displays the first record of the file and offers several options. You can move to the next or previous record of the file by pressing N or B, respectively. You can change the record you're currently viewing by pressing C, or you can delete the current record by pressing D. The EDIT/VIEW FILE option offers two print options. Type (press T) dumps the current screen to the printer. Print (press P) lets you define how the record will be printed.

When you press P, Handy Filer displays the current record print format and asks whether you want to change the format, print the record, view the record, or quit. The change option allows you to define the column and line at which each field of the record will start. If you don't want a field to be printed, set the starting column for that field to 0. Press P to print the record to the printer and V to print it on the screen. Pressing RETURN returns you to the EDIT/VIEW FILE screen. Press RETURN again to return you to the main menu.

Printing

The PRINT FILE option allows you to print all the records in the file or only those that match a search string. The PRINT FILE option differs from the print option available on the EDIT/VIEW FILE screen. PRINT FILE prints each record on a single line, and it prints more than one record.

When you select the PRINT FILE option, Handy Filer displays

the current file print format and asks whether you would like to change the format, print the file, view the file, or print the records that match a specified string. The change option lets you specify where each field will begin on the line. As with printing records, enter 0 to prevent a field from printing. The print option prints to the printer. The view option prints to the screen.

The match-list option allows you to print or view records which contain a search string in a specific field. Handy Filer first asks which field you would like to search; then it asks for the string to search for. Pressing RETURN without entering a search string will return you to the PRINT FILE screen. After you've entered a search string, you can print the matching records, view the matching records, or return to the main menu.

Searching and Sorting

Handy Filer's HUNT FOR RECORD option makes locating specific information easy. Suppose, for example, that you have a data file containing information about your tape collection. If you know that you have a tape by the Byrds from 1971 but can't remember its name, you could use HUNT FOR RECORD to search for tapes released in 1971 or for albums released by the Byrds.

When you select the HUNT FOR RECORD option, Handy Filer asks you to choose which field to search and the string to search for. Simply type the string that you want Handy Filer to search for. Optionally, you can use the asterisk (*) character as a wildcard in your search string. For example, if you enter F* as the search string, Handy Filer might find records with *Fish* or *Fred* in the search field.

Handy Filer locates the first record that matches the search string and then asks if you want to continue searching. You may press RETURN to return to the main menu or Y to look for another match. If Handy Filer doesn't find a matching record, it returns to the main menu.

The SORT FILE option sorts the data file in ascending order according to a field-sort sequence. The first field in the sequence is the primary sort field. If two records have the same value in the primary sort field, the second field in the

5 sure steps to a fast start as a high-paid computer service technician

1. Choose training that's right for today's good jobs

Jobs for computer service technicians will almost double in the next 10 years, according to the latest Department of Labor projections. For you, that means unlimited opportunities for advancement, a new career, or even a computer service business of your own.

But to succeed in computer service today, you need training—complete, practical training that gives you the confidence to service any brand of computer. You need NRI training.

Only NRI—the leader in career-building, at-home electronics training for 75 years—gives you practical knowledge, hands-on skill, and real-world experience with a powerful XT-compatible computer you keep. Only NRI starts you with the basics, then builds your knowledge step by step until you have everything you need for a fast start as a high-paid computer service technician.

2. Go beyond "book learning" to get true hands-on experience

NRI knows you learn better by doing. So NRI training works overtime to give you that invaluable practical experience. You first read about the subject,

studying diagrams, schematics, and photos that make the subject even clearer. Then you do. You build, examine, remove, test, repair, replace. You discover for yourself the feel of the real thing, the confidence gained only with experience.

3. Get inside a powerful computer system

If you really want to get ahead in computer service, you have to get inside a state-of-the-art computer system. That's why NRI includes the powerful new Packard Bell VX88 computer as the centerpiece of your hands-on training.

As you build this fully IBM PC XT-compatible micro from the keyboard up, performing key tests and demonstrations at each stage of assembly, you actually see for yourself how every section of your computer works.

You assemble and test your computer's "intelligent" keyboard, install the power supply and 5¼" floppy disk drive, then interface the high-resolution monitor. But that's not all.

You go on to install a powerful 20 megabyte hard disk drive—today's most-wanted computer peripheral—included in your training to dramatically increase the data storage capacity of your

computer while giving you lightning-quick data access

By getting inside this powerful computer, you get the confidence-building, real-world experience you need to work with, troubleshoot, and service today's most widely used computer systems.

4. Make sure you've always got someone to turn to for help

Throughout your NRI training, you've got the full support of your personal NRI instructor and the entire NRI technical staff. Always ready to answer your questions and help you if you should hit a snag, your instructors will make you feel as if you're in a classroom of one, giving you as much time and personal attention as you need.

5. Step into a bright new future in computer service—start by sending for your FREE catalog today!

Discover for yourself how easy NRI makes it to succeed in computer service. Send today for NRI's big, 100-page, full-color catalog describing every aspect of NRI's one-of-a-kind computer training, as well as training in robotics, TV/video/audio servicing, electronic music technology, security electronics, and other growing high-tech career fields.

field-sort sequence is used to sort those records. Handy Filer continues to use fields from the field-sort sequence as needed until similar records are sorted. Not all the fields in the record have to be included in the field-sort sequence. Only those fields included in the sequence are used in sorting the file.

When you select the SORT FILE option, Handy Filer displays the current field-sort sequence and asks whether you would like to change it. If you want to change the sequence, type Y and enter the fields' numbers in the order that you would like them used by the sort. After the field-sort sequence has been set, Handy Filer sorts the file and returns to the main menu.

Disk Options

Handy Filer has several disk options that make maintaining your data file easier.

The SAVE FILE option allows you to store your data file on disk. Be sure that you save your data file before exiting Handy Filer, or you will lose any changes that you have made to the file.

The LOAD DISK FILE option lets you retrieve data files stored on disk. Handy Filer displays a list of the data files on the disk in drive 8. Simply enter the number of the file you want to load.

The DELETE FILE option allows you to delete data files from your disk. As with LOAD DISK FILE, Handy Filer shows the data files on the disk and asks you to select one to delete. Handy Filer asks whether you're sure before deleting the file.

The VALIDATE DISK option executes a disk validate command. Validate will clean up any splat files on your disk and update the block allocation map. Be sure not to choose this option if there's a GEOS disk in the drive.

Other Options

The CHANGE RECORD FORMAT option allows you to redesign the record format of the file that is currently in memory. It should be used if you want to add a field, delete a field, or change the title, length, or justification of a field. The CHANGE RECORD FORMAT op-

tion is similar to the DEFINE NEW RECORD option. The difference is that CHANGE RECORD FORMAT lets you transfer data from the old record to the new one.

When you choose the CHANGE RECORD FORMAT option, the current record format is displayed at the top of the screen and you are prompted for the title of the first field in the new format. Enter the field title, length, and justification just as you did when creating a new record format. After you've entered the field justification, Handy Filer asks for the fill field. This is the number of the field in the current record format that should be placed in this field of the new format.

The BEEP option allows you to toggle beeping on and off. Handy Filer defaults to beeping when it expects input from the user.

The final option in the main menu is QUIT PROGRAM. This option returns you to BASIC. Be sure to save your data file before using this command if you've made changes to the file.

See program listing on page 99.

Introducing the 1541 RAMBoard

Copy protection's "worst nightmare"
The dream has been there for years now: an inexpensive piece of hardware that, when added to your system, would allow you to backup almost every single piece of software ever released for the C64.

Software Support has just made the dream a reality!
We're proud to introduce the 1541 RAMBoard, a small card that can easily be installed into your 1541/1541C disk drive in 5 minutes using just a screwdriver. With this powerful card in place, backup hassles are a thing of the past! Working with special software, the RAMBoard will backup software that other utilities can't even scratch the surface of. And as new protection schemes arise, we'll create new parameters to keep your RAMBoard operating behind enemy lines.

RAMBoard also comes bundled with a fast copier that can archive an unprotected disk in under 50 seconds!

The concepts behind "card" systems are public domain. So why should you have to pay \$44.95 or more for someone else's "card"? Software Support will sell you the hardware for just \$26.95!! So if you don't have an unlimited income, don't worry. Just order your new RAMBoard from Software Support -- the company that's declared war on high prices.

RAMBoard -- Our Price: \$26.95

Other companies "card" boards: \$44.95 or more.
*The 1541 RAMBoard requires software to operate. This software can be either RAMBoard parameters, soon to be found on our Renegade program disk, or any of the other "card" software already on the market.

FLASH! Kracker Jax Earns a 5 Star Rating In INFO's May-June '88 Issue

Kracker Jax is the powerful parameter based copying system that has taken the country by storm! What IS a parameter? It's a custom program that allows your 1541 or 1571 disk drive to strip ALL copy protection from your expensive software, leaving you with UNPROTECTED, TOTALLY BROKEN BACKUPS that can even be copied with a simple fast copier!

We declare Kracker Jax to be the best system of its kind on the market today! A bold claim? Maybe.

But don't take our word for it--if you want the REAL story on how good Kracker Jax is just ask one of our customers. Don't worry. You won't have any problem finding one.

Vols 1 thru 7 Only \$9.95 each

ATTENTION C-128 OWNERS

Now that Commodore has released the C-128D with 64K of video RAM, we should be seeing 128 programs address this fantastic new feature soon.

BASIC 8 already has the capability of using all 64K of video RAM. If you own the C-128 in stock condition, you own all 16K of video RAM that Commodore felt was necessary. Using BASIC 8 format and the full 64K of video RAM provides you with the ability to scroll through video memory as well as enhanced color resolution.

Up until now, to upgrade the C-128 to 64K of video RAM you would have to first search out the components, then find a competent repair outfit to desolder and install the parts. What a hassle!

SOLUTION -- We have developed a module that simply plugs in to the mother board of your C-128. No splattered solder -- No heat damage -- No hassle.

This package includes full easy to follow installation instructions, a test program to validate proper installation and the plug-in upgrade module.

Only \$44.95

RENEGADE

Here's what the world's toughest critics have to say.

If you think the toughest critics work for the magazines, you're wrong. The toughest critics are the people who actually use a program day in and day out. The people who depend on a program to do exactly what it says it will do. The people who pay out hard-earned money to buy a program -- and who want to make sure they're getting their money's worth. The toughest critics aren't the people who review a program -- they're the people who actually own the program.

Here's what some of those people have to say about Renegade:

- Thanks for (a) dream come true. W.C. FL
- We waited long enough! But, the best things come to (those) who wait. C.P. CT
- Very impressed!!! T.W. MI
- More than meets (my) expectations; great! D.S., WI
- Well worth the long wait!!! G.H., MO
- Subscription service is a great innovation. B.C., CA
- Excellent! It's all I'll use! Keep up the good work. J.D., NH
- Finally, the best copier I'll need to buy!!!!!! P.G., NC
- Thanks for (your) user support! A.S., TX
- C64 owners have needed this for quite some time. R.C., NY

Renegade is a synthesis of the best utilities ever created by the best programmers ever assembled on a project of this nature. Not only is Renegade the only archival software a Commodore owner needs, it's so advanced it's now the only archival software we make. This means all our R&D effort goes into making sure that nothing else on the market comes close to Renegade's capabilities.

FEATURES INCLUDE:

- 1541/1581/1571 Fast File Copier-Any Direction
- Single or Dual State of the Art Nibbler
- GCR Editor: For the Experienced Hacker
- 300+ Params: For those tough to backup disks
- Geos™ File Copier-Works under Desktop
- Capable of Archiving RapidLock Protection
- Error Scanner with Unique Sector Editor
- Popular subscriber service available!
- Single or Dual High Speed Data Copier
- Directory Editor: Organize your Disks
- Geos™ Modal: PARAMETERS and TOOLS
- Compatible with C-64/128 with 1541/71 Drives
- Dump Parameter Catalog to Printer
- Scrolling M/L Monitor with Drive Mon
- Byte Pattern Scanner: High Speed Searches
- Technical support available: of course

Renegade comes with over 300 parameters, and additional parameters are available every two months! Also, Renegade program updates are available to registered owners 3 times a year to ensure that Renegade will always be a step ahead of anything else on the market.

In the software industry, companies live and die by consumer opinion. Some companies have to learn the hard way that people won't take unlimited abuse for very long. But in this volatile market, there's one thing we know for certain -- there are a lot of awfully tough critics out there saying things about us. And at Software Support International, we're working hard to make sure they keep right on talking.

Attention: Registered Renegade owners!
Parameter Module #3 is now available. Only \$9.95
Renegade V2.0 Upgrade also available. Only \$9.95

RENEGADE V2.0 with Parameter Modules 1-3

Only \$34.95

1581 TOOLKIT

When we program a utility, we DO IT RIGHT

Our customers demand the finest, so we can settle for no less. The 1581 TOOLKIT represents the finest set of disk utilities ever created for the 1581 disk drive. All of our routines are Ultra-Fast and represent state of the art programming. We support partitioning wherever applicable.

Features Include:

- Fast Copier (one or two drives): Backup over 800K in UNDER 2 MINUTES! This utility even reports errors.
- Fast File Copier (one or two drives): 1541/81/71 compatible - any direction - with partitioning.
- Track and Sector Editor: view and modify data easily on your 3 1/2 inch diskettes
- Directory Editor: organize whole disk directories or partitions - this tool is indispensable.
- Byte Pattern Search: We modified our famous utility to support the 1581 disk drive. You'll love it!
- Error Scanner: Scan important disks for possible problems. This is a one of a kind utility.
- File Track and Sector Tracer: Scan and modify files fast, Even supports partitioning.
- Fast Formatter: Allows fast formatting of either whole disks or ranges of tracks, you decide.
- Relocatable Fast Loader: Now you can fast load all your 1581 files with this super quick fast loader.
- Partition Creator: Open partitions easily with this simple to operate utility. Even a novice can use it.

And as if this weren't enough, included with each toolkit is our 1581 DOS Reference Manual. Over 100 pages of valuable inside information on your 1581 disk drive. Written by David Martin (INFO magazine's Copy Corner reviewer), this manual represents about a year of investigation and research results. Also included with your 1581 TOOLKIT is a variety of handy utilities, including an M/L monitor with Drive Mon, written especially for the 1581 DOS Reference Guide. We could go on and on, but the sooner you order the 1581 TOOLKIT, the sooner you'll experience the finest!

The 1581 TOOLKIT (on 3 1/2" diskette)
and 1581 DOS REFERENCE GUIDE

Only \$39.95

ATTENTION: SUPER SNAPSHOT OWNERS!

Now, you can expand the capabilities of your Super Snapshot cartridge. If you program in BASIC, you'll love the Erom we have just for you. We have reprogrammed SYSRES, the classic BASIC programmer's tool to fit into your Super Snapshot Cartridge. No soldering or tools required. Just lift out the Super Snapshot Erom and pop in Sysres. Instant access is yours. Sysres adds over 25 major commands to BASIC, and the extended DOS wedge is a pleasure to use. We even include a 1541/71 compatible fast loader, and an M/L monitor accessible from BASIC.

Your SYSRES package includes over one hundred pages of detailed documentation, and a disk based program, as well as an Erom for your Super Snapshot Cartridge.

SYSRES - Still only \$39.95

KRACKER JAX REVEALED III

We've done it again!

Serious Commodore Users know why the Revealed Books by Kracker Jax are the last word in Commodore copy de-protection information. Our knowledge of protection schemes has made us famous. Now find out how we do what we do best. Our books are your key to real knowledge. OTHERS ONLY SCRATCH THE SURFACE. We dig deep, much deeper. Not for the novice user, Kracker Jax Revealed Volume III you deep into the 1541 disk drive, where today's copy protection resides. If you have read and mastered the techniques set forth in Revealed I and II, you're ready for the next step - Kracker Jax Revealed III. Included as a free bonus is The Hacker's Utility Kit, one of the finest set of disk utilities gathered together in one package.

REVEALED BOOK III with Hacker's Utility Kit . . . \$23.50

REVEALED BOOK II with Hesmon Cartridge . . . \$23.50

REVEALED BOOK I with Reset Board . . . \$23.50

SOFTWARE
SUPPORT
INTERNATIONAL

Ordering is simple. We accept money orders, certified checks, personal checks (of previous Software Support customers), VISA, M/C, Discover, and COD. Orders shipped to U.S.A., F.P.O., A.P.O., Canada, or Mexico, please add \$3.00 per order for shipping and handling. COD available to U.S. customers only: add \$2.25 additional per order. Foreign customers must call or write for exact shipping charges. Defective items are replaced at no charge IF and only IF you call for a Return Authorization Number. All in stock orders are processed within 24 hours. U.S. Shipping is by UPS ground in most cases. FAST 2nd DAY AIR available: add \$1.00 per pound additional (U.S. 48 states only). U.S. software orders over 100 dollars will be shipped 2nd Day Air at our regular \$3.00 S.H. charge. Washington residents please add 7.5% additional for Sales Tax. All prices subject to change.

the programmer's page

Shorter, Faster, Better

Randy Thompson
Contributing Editor

"The Programmer's Page" is interested in your programming tips and tricks. Send all submissions to The Programmer's Page, COMPUTE!'s Gazette, P.O. Box 5406, Greensboro, North Carolina 27403. We'll pay \$25-\$50 for each tip we publish.

Commodore programmers are a rare breed. They're always looking for shorter, faster, more efficient ways to do things. For example, take a look at the following tips sent in by some of our readers.

Odd or Even?

An easy way to check whether a number is odd or even is to AND it with 1. If the result equals 1, the number is odd. If the result equals 0, the number is even. For example, the following code checks to see if the variable X is an even number:

```
10 IF X AND 1 = 0 THEN PRINT X;"IS  
AN EVEN NUMBER."
```

You can use this trick with any integer between -32768 and +32767, and it works on any Commodore computer.

Joseph R. Charnetski
Dallas, PA

Easy 40/80 Switching

Everybody knows that you can switch between the 40- and 80-column screens on the 128 by printing an ESC-X (PRINT CHR\$(27) "X"), but did you know you can do the same thing with SYS 65375? When used from within a program, the SYS command is both shorter and easier to use.

Mike Prestwood
Milpitas, CA

Clearing the Hi-Res Screen

Clearing a hi-res screen from BASIC can take a very long time.

With this one-liner, you can instantaneously clear the 64's hi-res screen located at 8192:

```
CLR:F=FRE(0):DIM A((-65536*(F<0)  
+F)/5-10):CLR
```

Using this code clears all BASIC program variables, so it's best to use it at the beginning of a program.

Chris Newton
Newcastle, NB

Missing Functions

Commodore BASIC for the 64 and 128 has a number of built-in mathematical functions, yet there are some very useful functions that BASIC does not provide. For example, although the SQR function returns the square root of a number, there is no function for returning other roots, such as the cube root. The following tips show you how to simulate some of these missing functions. (In each example, assume that the number being operated on is stored in the variable N.)

To find any root of N, use

```
X=N^(1/R)
```

where R is the root.

Commodore's LOG function returns the natural log, or log to base e (2.71828). To find the common log (log to base 10) of a number, use

```
X=LOG(N)/LOG(10)
```

EXP is similar to LOG except that it calculates the value of e raised to the power inside the parentheses. A more useful function would be one that returned the value of 10 raised to the power inside the parentheses. To find the value of 10 raised to the power N, use

```
X=EXP(N*LOG(10))
```

BASIC provides sin, cosine, and tangent functions but not secant, cosecant, or cotangent functions. To find the secant of any number, use

```
X=1/COS(N)
```

To find the cosecant, use

```
X=1/SIN(N)
```

To find the cotangent, use

```
X=1/TAN(N)
```

Vincent D. O'Connor
Babbitt, MN

Function-Key Flip

To redefine the 128's functions keys so they return the same ASCII value as on the 64, execute a POKE 828,183. To return the function keys to their default definitions, execute a POKE 823,173.

Earl Kanady
Las Vegas, NV

Free Blocks Revisited

Ever since we published the free-blocks tip in the October 1988 "Programmer's Page," several people have written in to suggest another, somewhat shorter method. Instead of the original

```
LOAD "$0",8  
LIST
```

many of you recommend using

```
LOAD "$$",8  
LIST
```

It's true that the latter method saves you one character's worth of typing, but I chose to publish the first technique because it works every time you use it. When you use LOAD "\$\$",8 two times in a row, you get a FILE NOT FOUND error.

If you really want to save yourself the typing, try abbreviating the LOAD command with an L SHIFT-O or abbreviate the LIST command with an L SHIFT-I. To shorten the original tip even further, you can remove the 0 that precedes the colon. It's best to leave it in, however, because the 1541 often confuses itself with a dual disk drive and attempts to access a nonexistent drive 1. This single-/dual-drive identity crisis is one of the reasons why DOS's save-with-replace command is so flaky; it's also, I suspect, the reason why LOAD "\$\$",8 works only the first time you use it.

BUILT FOR SPEED

Now Get Inside Your Commodore with *COMPUTE!'s Gazette Disk.*

Now there's a way to get all the exciting, fun-filled programs of **COMPUTE!'s Gazette**—already on disk—with **COMPUTE!'s Gazette Disk**.

Subscribe today, and month after month you'll get a new, fully-tested 5 1/4-inch floppy disk guaranteed to run on your Commodore 64, or Commodore 128 personal computer.

COMPUTE!'s Gazette Disk brings you all the latest, most challenging, most fascinating programs published in the corresponding issue of **COMPUTE!'s Gazette**. So instead of spending hours typing in each program, now all you do is insert the disk... and your programs load in seconds.

RESULT: You have hours more time to enjoy all those great programs which appear in **COMPUTE!'s Gazette**—programs like SpeedScript 128, Arcade Volleyball, 3-D Sprites, Sketch Pad, Scound Manager, 1541 Speed and Alignment Tester, and hundreds more.

So don't waste another moment. Subscribe today to **COMPUTE!'s Gazette Disk** at this money-saving price. Take a full year's subscription for just \$69.95. You save 55% off the single issue price. Subscribe for two years and save even more! Return the enclosed card now.

Individual issues of the **Disk** are available for \$12.95 (plus \$2.00 shipping and handling) by writing us at P.O. Box 5188 Greensboro, N.C. 27403.

BASIC for beginners

More Disk BASIC

Larry Cotton

Happy New Year. I hope your holidays were happy and that you benefited from the wish-list program presented last month—if not directly, at least from accumulating new knowledge of BASIC.

This month we'll finish explaining the program. Recall that there are seven subroutines that are accessed by the menu:

1. Add item(s) to list
2. Save list to disk
3. Load list from disk
4. Delete item from list
5. See list on screen
6. Print list
7. Quit

Loading Data from a Disk

We've covered the first two subroutines; next is the load-from-disk subroutine, which begins at line 330:

```
330 L$="":INPUT "{DOWN} NAME OF  
LIST TO LOAD";L$:IF L$="" THEN  
RETURN
```

This line is identical to line 280 from last month, except for the word *LOAD*. We're asking the user to type the name of a wish list that he or she has previously saved. Our example list title was WISH LIST 1, which was stored in L\$.

We must now open a channel of communication with the disk drive:

```
340 OPEN 1,8,0,L$
```

Again, this line is identical to one from last month (290), with one important exception: the secondary address of 0. Recall that the OPEN command opens a channel of communication. The number 1 is the file number. The 8 is the device number and indicates that we're communicating with the disk drive.

Now the all-important 0: This says that we intend to read data from a disk file. L\$ is the name of the data file that the user entered at line 330. In order for a disk read to

be successful, the drive must be able to find the exact name of the data file you saved (such as WISH LIST 1).

If you ran the program and saved a wish list to disk last month, did you look at the disk directory afterward? If so, you saw that the name of the file was labeled PRG (PRoGram) and it was annotated with a number in the left margin of the disk directory.

However, your data is not a program, and it cannot be run. The number in the left margin is the data's length, in blocks. About 254 characters are held in a block.

So far, we haven't actually loaded any data; we've only told the disk drive to get ready to load it. Next we use another BASIC statement, INPUT#, which reads the information from the disk drive.

```
350 INPUT #1,C:IF C=0 THEN PRINT  
" {DOWN} NO LIST FOUND":  
GOTO 370  
360 FOR T=1 TO C:INPUT #1,I$(T):NEXT  
370 CLOSE 1:GOSUB 450:RETURN
```

INPUT# works similarly to INPUT (as in line 330), except that instead of getting information from the keyboard, it gets it from the disk. C holds the number of items in the wish list. If for some reason C is equal to 0 after the INPUT# statement, the message NO LIST FOUND is printed and the program jumps to line 370.

Line 360 uses a FOR-NEXT loop to load the data from the disk into the computer's memory as array I\$(). Line 370 closes the file, goes to a subroutine that prints the list and returns to print the menu.

Writing Parallel Lines

Note that program lines which get the name of the file from the user, open the channel, and write and read data to and from the disk drive are very similar.

When I write BASIC programs that communicate with the disk

drive, I always write such lines in parallel form. This helps ensure that the data is loaded in exactly the same order and format as it was saved. This is extremely important.

First write the OPEN 1,8,1,L\$ (disk save) line. Let's say it's line 200. Then move the cursor back up to that line number and change it to a higher number—say, 300. Cursor over to the *second* 1 and change it to 0. You've created your OPEN 1,8,0,L\$ (disk load) line.

Similarly, when you write the PRINT# lines (with numbers in the 200s), cursor back up to those lines, change the line numbers to numbers in the 300s, and type INPUT# over PRINT#. This way the information will always be saved and loaded in exactly the same order, and with the correct, corresponding syntax: 1 goes with PRINT#, and 0 goes with INPUT#.

Last month I said this would not be a tutorial on communicating with peripherals—so we'll leave our discussion of disk activities here. You should understand enough to do simple disk saves and loads. The delete-item subroutine is next. It gets a little tricky, so follow closely.

Deleting Items

Remember that we're storing our wish list as an array I\$(), in which C keeps track of the number of items in the list. At any given moment, while running the program, you can press the RUN-STOP key; for example, if you want to see what the third item on the list is, type—in the immediate mode—PRINT I\$(3).

The first line of the delete-item subroutine just checks to see if that count is 0 (no items entered); if so, the subroutine returns

```
380 IFC=0 THEN RETURN
```

The next line starts a FOR-NEXT loop that prints—one at a time—the items and their corre-

sponding numbers, which have already been entered. For each increment of T, the screen is cleared and the cursor is positioned two lines down:

```
390 FOR T=1 TO C:PRINT "{CLR}" {2
DOWN}":PRINT T;I$(T)
```

The next two lines print brief instructions to the user:

```
400 PRINT "{DOWN}" PRESS RETURN
TO CONTINUE OR
410 PRINT "{DOWN}" SPACE BAR TO
DELETE ITEM
```

Line 420 contains a new BASIC function, which we'll just touch on this month—CHR\$():

```
420 GETA$:IF A$ <> CHR$(13) AND A$
<> " " {SPACE} THEN 420
```

Our familiar GET statement waits for the user to press either the RETURN key or the space bar. If neither is pressed, the program loops at this line. By using <> (not equal to), we ensure that no other key will elicit a response.

Why did we use CHR\$(13) to detect the RETURN key? Each character in a computer's set of characters has a code number as-

signed to it—even a carriage return, which is produced by pressing RETURN. You can detect which key (or combination of keys) is pressed by checking for the resulting CHR\$ value. Because a space is CHR\$(32), line 420 could have been

```
420 GETA$:IF A$ <> CHR$(13) AND A$
<> CHR$(32) THEN 420
```

We'll cover CHR\$ and its related function ASC more thoroughly in a future column. Let's get back to the program.

```
430 IF A$=CHR$(13) THEN NEXT:
RETURN
```

If the RETURN key is pressed, the FOR-NEXT loop started at line 390 will continue; more items and their numbers will be printed on the screen. Here's the tricky line:

```
440 FOR Z=1 TO C:I$(Z)=I$(Z+1):NEXT:
C=C-1
```

If the space bar is pressed, control falls through to line 440. Remember what we're trying to do: delete an entry. So we introduce another (nested) FOR-NEXT statement, which loops through the entry to be deleted plus all the remaining entries and replaces each one with its succeeding entry. As an example, here's part of the I\$() array from my wish list:

```
I$(1)="1989 CALENDAR"
I$(2)="THREE MAIDS A-MILKING"
I$(3)="HARD DISK DRIVE"
I$(4)="MORE MEMORY"
I$(5)="PEACE"
I$(6)="QUIET"
```

Say we want to be practical and delete I\$(2)—three maids a-milking. It and all the remaining strings must—one by one—be replaced by the one after it. I\$(2) must become I\$(3), hard disk drive; I\$(3) must become I\$(4), more memory; and so on.

Lastly, the counter must be decremented by one, to compensate for the dropped string.

See the List

Three more subroutines to go. First, look at the one to see the screen, which should be self-explanatory:

```
450 IFC=0 THEN RETURN
460 PRINT "{CLR}":FOR T=1 TO C:
PRINT T;I$(T):NEXT
470 PRINT "{DOWN}" PRESS ANY KEY
FOR MENU.
480 GETA$:IF A$="" THEN 480
490 RETURN
```

Here's the subroutine for sending the wish list to a printer:

```
500 IFC=0 THEN RETURN
510 PRINT "{DOWN}" PRINTING ...
520 OPEN #4:FOR T=1 TO C:
PRINT #4,I$(T):NEXT:PRINT #4:
CLOSE #4:RETURN
```

Line 500 has been seen before as 270, 380, and 450. Line 510 prints a message to let the user know what's going on.

Line 520 is the heart of this subroutine. We open the communication channel with OPEN. It has become conventional to use two 4s when a Commodore computer talks to a printer. They correspond, as when communicating with a disk drive, to the file and the device numbers, respectively.

The file number doesn't make much sense when addressing a printer; however, it is required by the syntax following OPEN. What isn't required is the third number, as when communicating with a disk drive. Omitting the third number is equivalent to using 0 as the third value.

Now that the channel is open, we use a FOR-NEXT loop and PRINT# to send the data to the printer as the I\$(C) array, much as we sent it to the disk drive.

To close communications with a printer, use PRINT#4:CLOSE #4. The subroutine ends with the usual RETURN.

Lines 500-520 can be replaced with these if you don't have a printer:

```
500 PRINT "{DOWN}" NO PRINTER
HERE":PRINT "{DOWN}" PRESS
ANY KEY TO CONTINUE ...
510 GETA$:IF A$="" THEN 510
520 RETURN
```

Quitting

Lines 530-560 contain the subroutine that permits the user to end the program:

```
530 PRINT "{DOWN}" ARE YOU
SURE?
540 GETA$:IF A$="" THEN 540
550 IF A$="Y" THEN END
560 RETURN
```

The only line that needs explanation is 550. This is a safe-end technique; it allows the user only one keypress to end the program—Y (for Yes). If any other keypress is made, the program returns to the menu.

Over the next several months, we'll have coverage of CHR\$, ASC, error messages, DEF FN, and much more. Stay with us in 1989.

C-128 SOFTWARE

SHADOWDOS

"Surrender your C-128 over to the power of SHADOWDOS!"

- Use SHADOWDOS to copy disks and files, alphabetize directories, list programs from disk, autoboot disks, format, scratch, rename and collect.
- Up and down directory scrolling—touch of a key loads program selected.
- SHADOWDOS hides in your computer's memory. Switch back and forth from BASIC and SHADOWDOS at the touch of a key.
- SHADOWDOS functions do not destroy programs in memory. You're safe even with diskcopy.
- Place SHADOWDOS on all your disks for instant SHADOWDOS bootup.
- Vivid on-screen menus make SHADOWDOS simple and ready to go, when you need it.
- SHADOWDOS is a programmer's and hacker's fantasy. No more mundane and time consuming disk tasks.

machine language programming

String Passing

Jim Butterfield
Contributing Editor

Many BASIC programmers avoid the annoying INPUT command by writing custom input routines using the GET command. The problem is that in doing so, they often run into new problems, such as garbage collection delays.

Can a short machine language module be written to do this input without the drawbacks of the BASIC commands? Yes, but there's a hitch. A machine language program can scoop in a string from BASIC with ease, but it has a devil of a time passing this string back to the BASIC calling program. BASIC strings are tricky, and different Commodore computers build them in differing ways.

When a BASIC program creates a string with a command such as INPUT X\$, a number of complex events take place. An entry for X\$ is made in the table of BASIC variables. The system inputs the string to a buffer area and measures how long it is. The BASIC interpreter goes looking through memory for a space big enough to hold this string. If it finds the space, it copies the string there, then marks off the area as used.

There's more. Pointers are set up. If the memory space is not found, more things happen. BASIC strings can be complicated from the ML programmer's point of view. (And that's not even mentioning the extra things that the 128 does to avoid garbage problems.)

You don't want to do all this in your machine language routine—at least, not if you can avoid it.

One solution to the problem is this: Let BASIC make a string wherever it wants to do so in memory. Now a machine language program can receive keyboard input and deliver it directly into the existing BASIC string. When the ML pro-

gram returns to BASIC, the string will then contain the information.

This method is often named *string thing*. We'll use it in a moment. But first I need to point out a few things we'll be watching for.

We must be sure that we don't run beyond the string's storage area. If the string is generated by BASIC to be ten characters long, we must accept no more than ten characters.

On the other hand, if the input string is not as long as the space provided by BASIC, we must find some way to signal BASIC, telling it how many characters we have actually supplied.

A String Thing

Let's look at the code of a simple string-thing program. This program does not have special code for such features as recognizing the DELETE key or furnishing a prompt signal. These features are easy to add.

As written, this program works on the Commodore 64 only, or on the 128 in 64 mode. A 128-mode version would need extra code to allow for memory banking.

The first thing to do is to find the string so that we know how long it is and where it is located. We will assume that the string variable is the first variable used in the program. This will save us code, since it tells us that the string data will be at the start of the variable table.

The variable table starts at a location pointed to in addresses \$2D and \$2E (the "start-of-variables" pointer). The first variable is assumed to be the one we want. The first two bytes contain the variable name. We don't need this, so we'll start off with a 2 in the Y register:

```
0380 LDY #02
```

This loop copies the bytes in the variable table into addresses \$8B-\$8E. The first three bytes are the descriptor: \$8B gives the string length, \$8C/D give its address. \$8E

contains a 0.

```
0382 LDA ($2D),Y (Variable element)
      STA $0089,Y
      INY
      CPY #006
      BNE $0382
```

Here comes our main GET loop. We GET a character; if it's binary 0, we return immediately to the GET statement, since there no character was received. Then we check to see whether the character is a RETURN, in which case we leave the loop:

```
038C JSR $FFE4 (GETIN)
      BEQ $038C
      CMP #$0D (RETURN?)
      BEQ $03A5
```

We have a character, and it's not RETURN. We will get the character count from address \$8E (initially, there will be a 0 there), and check to see that it's not at the string size limit (the value of which is stored in \$8B). If we have hit the limit, we ignore the character:

```
LDY $8E (Count)
CPY $8B (Limit?)
BCS $038C
```

It appears to be an acceptable character. We echo it and store it in the string (position Y, right?). Then we add 1 to Y, store it in \$8E, and go back:

```
JSR $FFD2 (Print)
STA ($8C),Y (Store in string)
INY (Increment count)
STY $8E
BNE $038C (Always branch)
```

When we see a RETURN, we're finished. We need only echo it (moving us to a fresh screen line), and then we can return to BASIC. We could code JSR (Jump to SubRoutine) followed by RTS (ReTurn from SubRoutine), but it's just as easy to JMP (JuMP) to the subroutine and let it return to BASIC on our behalf:

```
03A5 JMP $FFD2 (Print and exit)
```

For an example BASIC listing, see page 106.

Scientists are finally beginning to unlock the mysteries of the human brain. It's a difficult job (and it'll be a long one), but they have already uncovered many interesting facts. Among them: The brain's speed is due to its use of parallelism and associative memory.

How does your Commodore 64 stack up against your brain? In general, not too well. Take a few minutes to think about the things that your brain does all day and all night. Think of all the decision making you do, but don't forget those tasks like keeping the heart beating and the lungs pumping. Don't leave out the monitoring of the senses. And don't forget the unconscious—your dreams are far beyond the imaginative and even the logical powers of any program ever written. Finally, consider the most amazing form of thinking: thinking about thinking.

The 64 should seem a pretty pathetic beast after that exercise, but let's spend a few more paragraphs putting it down. Only by understanding its limitations can we appreciate its power. First, consider that the 64 is basically a single-tasking machine—it can do only one thing at a time. That means that if you hooked your 64 up to a jaw and a pair of legs, it couldn't walk and chew gum at the same time.

Serial vs. Parallel

Most microprocessors think in serial. (The 6502 used in the Commodore 64 does. So does the 68000 used in the Amiga.) That means that the processor executes one operation at a time. Load the number 4, add the number stored in memory location 49152, store the result in memory location 2048. This limitation is called the *Von Neumann bottleneck*. (Engineers call a structure a bottleneck when it is the limiting

factor of performance. For instance, the neck is the limiting factor of the speed of pouring when you empty a bottle of Pepsi.)

It's a nasty turn of history that leaves John Von Neumann's name best known as a kind of bottleneck. John Von Neumann was a mathematical genius whose contributions in the 1940s and 1950s included the recognition of the advantages of binary storage and the stored-program concept. Before EDVAC (a computer designed by Von Neumann), computers had to be hand-wired for each program. More than anyone else, Von Neumann is responsible for the architecture of the Commodore 64 and nearly every computer built. It's a testament to Von Neumann that only recently have we begun to build machines which leave the bottleneck behind.

Your brain thinks in parallel. Sensory information is gathered, impulses to muscles are sent out, logical thinking is carried out—all at the same time. A parallel system can emulate a serial one. You're thinking in serial when you reason that (1) you're holding an apple and (2) all apples are fruits, so (3) you're holding a fruit.

The brain thinks in parallel because it consists of billions of neurons, each one communicating with many others. Neurons are relatively simple compared to the single (very complex) computing element used by the 64.

New computers, like the Transputer and The Connection Machine, are moving more toward the brain's system. These computers make do with many (though not so many as are in a human brain) simple (though not so simple as a neuron) computing elements.

Associative Memory

For a computer to remember a fact, it must know where that fact is stored. If it doesn't know, it will have to

search its entire memory for that fact. A human brain remembers differently. You might remember the layout of your grandmother's kitchen when you smell pancakes. This kind of remembering depends on associative memory (memory by association).

Researchers are hard at work to develop associative memory systems. Database programs could take advantage of associative memory to search huge databases in the blink of an eye. How much does Joe Smith owe on his account? Even with 100,000 names in a database, an associative memory system will find Joe's account in one step.

Is a 64 So Dumb?

So how stupid is the 64? Compared to your own brain, it's pretty dull. But it does what it was designed to do, and it does it well. Challenge your 64 to an adding contest in BASIC (a relatively slow computer language). Using paper and pencil, add up the 100 consecutive numbers which start at the number 98765. Then write a BASIC program which does the same thing. Your 64 will win handily. In fact, even beginning programmers could write this program, debug it, save it to disk, and run it before they could add even the first 25 numbers.

You'll find that the 64 is much more reliable than your own brain. If you can add the numbers without making a mistake, you're doing great. The 64 could run the program day and night for years without making a mistake.

There are things you can do that your 64 could never do. But there are things the 64 can do that you can't. For instance, you can't hook up your brain to a composite monitor to play a videogame.

You'll enjoy the experience of human brain and computer working together best when you understand the limitations and capabilities of both machines. ●

Fred D'Ignazio
Contributing Editor

Last month I described the sorry state of Americans' geography education. I proposed that students might be motivated to learn more geography if they could fashion their own electronic field trips to faraway places.

Several programs for the Commodore 64 now enable children to take electronic field trips which offer two key ingredients that make geography come alive: First, they let children become "knowledge navigators" who chart their own paths across continents and bodies of information. Second, they give children a mission—a problem, mystery, crime to solve, or person to locate.

The most popular series of geography programs are the Carmen Sandiego programs from Brøderbund (P.O. Box 12947, San Rafael, California 94913-2947). The original *Where in the World Is Carmen Sandiego?* has been joined by *Where in the U.S.A. Is Carmen Sandiego?* and *Where in Europe Is Carmen Sandiego?*

Adults like the Carmen programs for their educational value and because they get this nice 1000-page *World Almanac* along with the program and manual (in *Where in the World*). But have you ever seen a kid reading an almanac just because it's a neat thing to do? Along comes Carmen, and kids are devouring almanacs, memorizing countries' flags, speed-reading their way through lists of national resources, and navigating across world political maps.

Charismatic Carmen

The secret is the character. Carmen, it seems, is a pretty charismatic woman—for boys, girls, and their parents and teachers. She's an ex-secret agent turned world-class

thief. She and her gang are on a global crime spree, and it's up to your kids to bring her to justice.

The "hook" is the chase. Your kids want to catch Carmen. To get her, they'll do almost anything. They'll journey to 30 different cities and plow through arcane facts about countries' currencies, history, landmarks, culture, and geography. As they chase after Carmen, they learn to be more efficient in their pursuit. They begin taking notes; they decipher clues using their on-board Crime Computer and their almanac. And, as the chase continues, invisibly and with very little pain, they sharpen their reasoning and research skills.

The two successors to *Where in the World* feature similar attractions. *Where in the U.S.A.* offers *Fodor's USA Travel Guide*; *Where in Europe* has *Rand McNally's Concise Atlas of Europe*. Both challenge veteran Carmen chasers with more difficult chase scenarios and reward them by promoting them as detectives. The newer programs allow students to save their investigation on disk so they can return to it later. And *Where in Europe* has an online Crimestopper's Notebook and a Factfinder's Database, which teaches data-management skills.

A Mission You Can't Refuse

Less well-known, but also inviting, are the Ticket programs from Blue Lion Software (90 Sherman Street, Cambridge, Massachusetts 02140). They include *Ticket to Spain*; *Ticket to Washington, D.C.*; *Ticket to Paris*; *Ticket to London*; and *Ticket to Hollywood*.

These programs are appealing because, like the Carmen programs, they give the child a mission. Faraway cities are neat places to visit, but they become irresistible when you're challenged to go there for some mysterious purpose, when

you have only so much cash to live on, when customs officials and hotel clerks stand in your path, or when the clock keeps ticking and you're running out of time.

Is This Critical Thinking, or What?

In *Ticket to Paris*, your mission is to locate your cousin, who is hidden somewhere in Paris and who has refused to return to the U.S. Your family hopes you can track him down and persuade him to come home with you. But in order to succeed, you have to master a myriad of details about French culture, currency, and language. You have to know Paris like you know the back of your hand. You have to solve all the little problems that confront real travelers when they visit a foreign land.

The ticket programs are remarkable in their accuracy (digitized pictures were taken of locations players visit) and in their constantly changing parameters—currency fluctuates, hotels fill up and change rates, and unpredictable events occur (you may end up in the hospital from fatigue or starvation if you don't look after yourself). I especially like the option to play each game in English or in the host country's language. And the programs are deliberately nonsexist, allowing a player to choose to be a male or female character.

The Carmen and Ticket programs are not perfect electronic field trips for your children. But they are welcome alternatives to textbooks as a means to stimulate interest in geography and to embed the study of geography in practical, real-life experiences and problems. Geography is, after all, only an abstraction. But the world is a very real place. Any tool that lets your child link geography to the real world is worth the investment. ☐

Roger T. Conroy

Get the most out of geoPaint, no matter which version you use.

In the June 1988 *Gazette*, E. William Huffman discussed many helpful hints for geoPaint users. This article builds on those hints. Version 1.3 of geoPaint eliminates many of the problems that the author discussed. Version 1.3 offers many improvements, in addition to the bug fixes.

The latest version of the operating system, GEOS 2.0, features a further improved geoPaint. Regardless of the version you use, the hints given here should help you on your path to becoming a geoPaint pro. For this article, I'll refer to version 1.3 of geoPaint.

Rotations

The largest image that you can rotate is one that's 141 × 141 pixels in size (that's one pixel less than the height of the edit window). If you're not sure that the image you want to rotate is small enough, draw a box around your picture with the box tool. As you draw, watch the pixel size in the status box.

The Chart

When you're designing a page with geoPaint, you'll benefit if you first plan your page on paper. I use 1/4-inch graph paper, which is available in pads at office supply, art, and stationery stores. If you use thin enough paper, you can trace pictures onto the graph paper.

With my Commodore MPS-1000 printer (which prints at 60 dpi), I find that a 1/4-inch square translates into a box on the screen 18 pixels wide × 15 pixels high. With a geoPrint cable and a printer in IBM mode (at 80 dpi), use a box that's 20 × 17 pixels.

You can draw boxes on the screen to correspond to the boxes on the graph paper. Alternatively,

you can draw just the intersections of the squares.

In the Cards

One very handy feature of geoPaint is the 8 × 8 pixel "cards" that control the background color. If you use the region tool with color turned on, the regions you select will snap to the dimensions of these cards. These cards are a result of the way the 64's video hardware works.

You can use these cards to make it easy to position your artwork on a page. To do so, follow these instructions.

First, use the color tool to change the background color to a pattern of gray and white squares. After you've built up a checkerboard of about 32 × 32 pixels (4 cards × 4 cards), copy this pattern to fill the entire edit window. Now, select the entire window and copy it to a scrap. Move down until you are free of the checkerboard and paste the scrap. The window scrolls down two cards at a time, so it's easy to fill the entire screen. When you've finished, save this checkerboard background to disk.

You can now draw an 8 × 8 or a 32 × 32 set of squares on the new document using the line tool in pixel-edit mode. Be sure to draw the lines on the upper and left edges of the squares. It's easy to copy a full edit window of these squares throughout the entire page. (See Figures 1 and 2.)

You should find that a grid based on eight-pixel groupings works better than one based on ten-pixel groupings. The region tool snaps around the cards when you save your clips to a photo scrap. Since you've changed the background color to a checkerboard, you'll know exactly what you're saving. The colored background does not print out, so you can leave it as part of the picture. A drawback to this method is that the checker-

board pattern is cleared to the default gray when you clear a region.

Enter Print Shop

I have found that the cards are especially useful when I copy *Print Shop* graphics. To import *Print Shop* graphics, I use the "Print Shop to GEOS" converter from the April 1987 issue of *Gazette*. I outline the graphic in white on the background so that I know exactly where to cut and paste. I now have a whole page of graphics to use, each one exactly outlined. This makes it easy to paste them into albums for use with *geoPublish*. (See Figure 3.)

• A reader has discovered a problem with October's "BASIC for Beginners" column:

I couldn't help but notice that the average speeds are calculated incorrectly in "BASIC for Beginners—The Smalltown 500" in the October 1988 issue. Mr. Cotton's program calculates the average speed for the race by summing the speeds for each lap and dividing by the total number of laps. This method may seem intuitively correct, but it isn't.

Mathematical textbooks use the relationship $\text{distance} = \text{rate} \times \text{time}$ to calculate speed. Based on this relationship, lap speed would be lap distance (I assume it's one mile) divided by lap time. Mr. Cotton's method of calculating average speed yields a value of 115.4 for car 1. The correct value is 115.135131. Speeds are calculated this way at Indianapolis; the Smalltown 500 shouldn't be an exception to the rule.

Gordon Childs
Lancaster, PA

Three lines must be changed to correct Smalltown 500. The name of the array in line 20 must be changed from SP to TI because the array now contains the total time for the race instead of the speed. Line 60 must be changed to sum the times for each car instead of the speed. The time for each lap is calculated by dividing the distance (one mile) by the speed. Finally, line 120 must be changed to print the average speed using the formula $\text{speed} = \text{distance} / \text{time}$.

Commodore Users Unite!

This year Commodore users like you came together on GEnieTM to get their Commodore questions answered by experts, their Commodore games won, their Commodore systems updated and their online Commodore opinions confirmed, researched, and applauded **862,391 times.**

Join the Revolution.

GEnie.TM

**For the people,
by the people.**

You've never been a follower. You want your voice heard. You want straight, unbiased information about your hardware and software. You want independent news. Opinions. And control.

GEnie understands. In the Commodore RoundTable on GEnie, the people determine what is discussed. And since GEnie is not a hardware or software developer, you'll get the most objective information about what's new on the market. That's why smart Commodore users like yourself turned to us over 800,000 times this year. That's why you should too.

GEnie makes sure you have access to all kinds of great Commodore software—including thousands of games, education and business productivity programs as well as hard-working utilities to expand your Commodore. And the experts you trust will be online when you log on. Plus news, shopping, travel and reference data. All for only 8¢ a minute.

Sign-up is just \$29.95, and your first 2 hours are free.* There are no hidden charges or monthly minimums. Now it's your call.

Here's how easy it is to sign-up from your keyboard now.

1. Have your major credit card or checking account number ready.
2. Set your modem for local echo (half-duplex)—300 or 1200 baud.
3. Dial 1-800-638-8369. When connected, enter HHH
4. At the U#=prompt enter **XJM11740,GEnie** then RETURN.

Need help or more information? No modem yet? We can help. In the U.S. or Canada call 1-800-638-9636. Join the online Revolution and let your voice be heard.

We bring good things to life.

*Basic rates and services in effect 9/88 apply in U.S. only. Non-prime time rates apply Mon.-Fri. 6PM-8AM local time and all day Sat., Sun., and nat'l. holidays. Subject to service availability. Some services offered on GEnie may include additional charges. *\$10 credit applies. Offer good for 30 days from sign-up.

GET MORE
PLEASURE
FROM THE
BIBLE WITH

LANDMARK

The Computer Reference Bible

Here's what LANDMARK will enable you to do:

- ✓ SEARCH THROUGH THE BIBLE---Find Phrases, words or sentences.
- ✓ DEVELOP TOPICAL FILES---Copy from The Bible text and search results then add your own comments and notes.
- ✓ COMPILE YOUR PERSONAL BIBLE--- Outline texts in color. Add Notes and comments. Create your own supplementary Study files.
- ✓ CREATE FILES--- Then convert them for use with wordprocessors like Paperclip and GEOS.
- ✓ MAKE SUPPLEMENTARY STUDY FILES--- and develop translation variations.

SUGGESTED RETAIL \$164.95

38464 C128 Dust Cover and Catalog (G4V)

The 39¢ Diskette

From micro fal

Are you paying too much for diskettes? Try our first quality, prime, 5-1/4" diskettes (no rejects, no seconds) at these fantastic sale prices and save, save, SAVE! Disks are packaged in boxes of 50; including diskettes in sleeves, labels, and write-protect tabs.

Each diskette is certified to be 100% error free and comes with a lifetime warranty (if you have a problem, we'll replace the diskette). All diskettes include hub reinforcement rings and write-protect notch.

All diskettes are double-density and work in either single or double-sided drives.

SS, DD Diskettes, Box of 50
32391 \$19.50 - 39¢ ea.
DS, DD Diskettes, Box of 50
32403 \$24.50 - 49¢ ea.

Diskette Storage

Only
\$9.95

- 100 disk (5-1/4") capacity.
- Lock and keys for extra security and easy carrying.
- Includes 8 index dividers with labels for organization of filing and retrieval.
- Made of durable anti-static, high impact plastic.
- Attractive smoked color lid.

MLX Machine Language Entry Program For Commodore 64

Ottis Cowper

"MLX" is a labor-saving utility that allows almost fail-safe entry of Commodore 64 machine language programs.

Type in and save some copies of MLX—you'll want to use it to enter future ML programs from COMPUTE!'s GAZETTE. When you're ready to enter an ML program, load and run MLX. It asks you for a starting address and an ending address. These addresses appear in the article accompanying the MLX-format program listing you're typing.

If you're unfamiliar with machine language, the addresses (and all other values you enter in MLX) may appear strange. Instead of the usual decimal numbers you're accustomed to, these numbers are in *hexadecimal*—a base 16 numbering system commonly used by ML programmers. Hexadecimal—hex for short—includes the numerals 0-9 and the letters A-F. But don't worry—even if you know nothing about ML or hex, you should have no trouble using MLX.

After you enter the starting and ending addresses, you'll be offered the option of clearing the workspace. Choose this option if you're starting to enter a new listing. If you're continuing a listing that's partially typed from a previous session, don't choose this option.

A functions menu will appear. The first option in the menu is ENTER DATA. If you're just starting to type in a program, pick this. Press the E key, and type the first number in the first line of the program listing. If you've already typed in part of a program, type the line number where you left off typing at the end of the previous session (be sure to load the partially completed program before you resume entry). In any case, make sure the address you enter corresponds to the address of a line in the listing you are entering. Otherwise, you'll be unable to enter the data correctly. If you pressed E by mistake, you can return to the command menu by pressing RETURN alone when asked for the address. (You can get back to the menu from most options by pressing RETURN with no other input.)

Entering A Listing

Once you're in Enter mode, MLX prints the address for each program line for you. You then type in all nine numbers on that line, beginning with the first two-digit number after the colon (:). Each line represents eight data bytes and

a checksum. Although an MLX-format listing appears similar to the "hex dump" listings from a machine language monitor program, the extra checksum number on the end allows MLX to check your typing.

When you enter a line, MLX recalculates the checksum from the eight bytes and the address and compares this value to the number from the ninth column. If the values match, you'll hear a bell tone, the data will be added to the workspace area, and the prompt for the next line of data will appear. But if MLX detects a typing error, you'll hear a low buzz and see an error message. The line will then be redisplayed for editing.

Invalid Characters Banned

Only a few keys are active while you're entering data, so you may have to unlearn some habits. You *do not* type spaces between the columns; MLX automatically inserts these for you. You *do not* press RETURN after typing the last number in a line; MLX automatically enters and checks the line after you type the last digit.

Only the numerals 0-9 and the letters A-F can be typed in. If you press any other key (with some exceptions noted below), you'll hear a warning buzz. To simplify typing, the numeric keypad modification from the March 1986 "Bug-Swatter" column is now incorporated in the listing. The keypad is active only while entering data. Addresses must be entered with the normal letter and number keys. The figure below shows the keypad configuration:

7	8	9	0
4 U	5 I	6 O	F P
1 J	2 K	3 L	E :
A M	B ,	C .	D /
0 Space			

MLX checks for transposed characters. If you're supposed to type in A0 and instead enter 0A, MLX will catch your mistake. There is one error that can slip past MLX: Because of the

checksum formula used, MLX won't notice if you accidentally type FF in place of 00, and vice versa. And there's a very slim chance that you could garble a line and still end up with a combination of characters that adds up to the proper checksum. However, these mistakes should not occur if you take reasonable care while entering data.

Editing Features

To correct typing mistakes before finishing a line, use the INST/DEL key to delete the character to the left of the cursor. (The cursor-left key also deletes.) If you mess up a line really badly, press CLR/HOME to start the line over. The RETURN key is also active, but only before any data is typed on a line. Pressing RETURN at this point returns you to the command menu. After you type a character of data, MLX disables RETURN until the cursor returns to the start of a line. Remember, you can press CLR/HOME to quickly get to a line number prompt.

More editing features are available when correcting lines in which MLX has detected an error. To make corrections in a line that MLX has redisplayed for editing, compare the line on the screen with the one printed in the listing, then move the cursor to the mistake and type the correct key. The cursor left and right keys provide the normal cursor controls. (The INST/DEL key now works as an alternative cursor-left key.) You cannot move left beyond the first character in the line. If you try to move beyond the rightmost character, you'll reenter the line. During editing, RETURN is active; pressing it tells MLX to recheck the line. You can press the CLR/HOME key to clear the entire line if you want to start from scratch, or if you want to get to a line number prompt to use RETURN to get back to the menu.

Display Data

The second menu choice, DISPLAY DATA, examines memory and shows the contents in the same format as the program listing (including the checksum). When you press D, MLX asks you for a starting address. Be sure that the starting address you give corresponds to a line number in the listing. Otherwise, the checksum display will be meaningless. MLX displays program lines until it reaches the end of the program, at which point the menu is redis-

The new Star Multi-Font. How did Star get it all in there?

*Friction and Tractor
Feeds Built-in*

*High-Resolution Graphics
(216 x 240 dpi)*

*Paper-Parking
Built-in*

It wasn't easy. But, we built an incredible number of features into the Star NX-1000C Multi-Font™. So now you and your Commodore can be as creative as you like.

The best feature in this new Star printer is built into its name—Multi-Font. It has four built-in type fonts that give you twenty different print style options. Just mix these fonts in with its high-resolution graphics to make great looking reports, greeting cards, posters—whatever you want.

And the list of built-in features goes on—

there's impressive speed in both draft and near letter quality. And an automatic single sheet feed. Plus, a paper-parking mechanism that lets you use single sheets without removing tractor paper. And the Multi-Font's easy-to-use push button control panel gives you command of over thirty-five functions.

Whether it's for serious work or serious play, the Star NX-1000C Multi-Font has so much built-in, you'll get more out of your Commodore. To find out where you can see the Multi-Font, call 1-800-447-4700.

star
micronics

The ImagePower™ Printers

played. You can pause the display by pressing the space bar. (MLX finishes printing the current line before halting.) Press space again to restart the display. To break out of the display and get back to the menu before the ending address is reached, press RETURN.

Other Menu Options

Two more menu selections let you save programs and load them back into the computer. These are SAVE FILE and LOAD FILE; their operation is quite straightforward. When you press S or L, MLX asks you for the filename. You'll then be asked to press either D or T to select disk or tape.

You'll notice the disk drive starting and stopping several times during a load or save. Don't panic; this is normal behavior. MLX opens and reads from or writes to the file instead of using the usual LOAD and SAVE commands. Disk users should also note that the drive prefix 0: is automatically added to the filename (line 750), so this should not be included when entering the name. This also precludes the use of @ for Save-with-Replace, so remember to give each version you save a different name.

Remember that MLX saves the entire workspace area from the starting address to the ending address, so the save or load may take longer than you might expect if you've entered only a small amount of data from a long listing. When saving a partially completed listing, make sure to note the address where you stopped typing so you'll know where to resume entry when you reload.

MLX reports the standard disk or tape error messages if any problems are detected during the save or load. (Tape users should bear in mind that Commodore computers are never able to detect errors during a save to tape.) MLX also has three special load error messages: INCORRECT STARTING ADDRESS, which means the file you're trying to load does not have the starting address you specified when you ran MLX; LOAD ENDED AT ADDRESS, which means the file you're trying to load ends before the ending address you specified when you started MLX; and TRUNCATED AT ENDING ADDRESS, which means the file you're trying to load extends beyond the ending address you specified when you started MLX. If you see one of these messages and feel certain that you've loaded the right file, exit and rerun MLX, being careful to enter the correct starting and ending addresses.

The QUIT menu option has the obvious effect—it stops MLX and enters BASIC. The RUN/STOP key is disabled, so the Q option lets you exit the

program without turning off the computer. (Of course, RUN/STOP-RE-STORE also gets you out.) You'll be asked for verification; press Y to exit to BASIC, or any other key to return to the menu. After quitting, you can type RUN again and reenter MLX without losing your data, as long as you don't use the clear workspace option.

The Finished Product

When you've finished typing all the data for an ML program and saved your work, you're ready to see the results. The instructions for loading and using the finished product vary from program to program. Some ML programs are designed to be loaded and run like BASIC programs, so all you need to type is LOAD "filename",8 for disk or LOAD "filename" for tape, and then RUN. Such programs will usually have a starting address of 0801 for the 64. Other programs must be reloaded to specific addresses with a command such as LOAD "filename",8,1 for disk or LOAD "filename",1,1 for tape, and then started with a SYS to a particular memory address. On the Commodore 64, the most common starting address for such programs is 49152, which corresponds to MLX address C000. In either case, you should always refer to the article which accompanies the ML listing for information on loading and running the program.

An Ounce Of Prevention

By the time you finish typing in the data for a long ML program, you may have several hours invested in the project. Don't take chances—use our "Automatic Proofreader" to type the new MLX, and then test your copy thoroughly before first using it to enter any significant amount of data. Make sure all the menu options work as they should. Enter fragments of the program starting at several different addresses, and then use the Display option to verify that the data has been entered correctly. And be sure to test the Save and Load options several times to insure that you can recall your work from disk or tape. Don't let a simple typing error in the new MLX cost you several nights of hard work.

4.09 MHz Accelerator Cartridge for C64

- Four times faster processing speed combined with five times faster disk Load and Save.
- Software actually runs four times as fast. Basic, word-processor scrolling and search, spreadsheets, assemblers, graphics, GEOS etc. Compatible with most software.
- Why upgrade when you can enjoy dazzling performance from your C64 now?
- Introductory price only \$179.

Data acquisition and control interfaces C64 & C128

80-line Simplified Digital I/O Board
with ROM cartridge socket
Model SS100 Plus \$129. Additional \$119.

Original Ultimate Interface
Universally applicable dual 6522 versatile interface adapter board.
Model 64IF22 \$169. Additional \$149.

16-Channel, 8-bit analog-to-digital conversion module.
Requires model 64IF22. Model 64IF/ADC0816 \$69.

Interface boards include extensive documentation and program disk. Manuals available separately for examination. Call or write for detailed brochure.

Resources for Serious Programmers

- Symbol Master Multi-Pass Symbolic Disassembler. C64 & C128. \$49.95
- PTD6510 super-powerful Symbolic Debugger. C64. \$49.95
- MAE64 6502/65C02 Macro Editor /Assembler. \$29.95
- C64 Source Code Book. Kernal and Basic ROMs. \$29.95

Please enclose an SASE if you wish to have the materials returned. Articles are reviewed within four weeks of submission.

**It Talks!
It Recognizes!
It Writes Music!**
VOICE CONTROL ADVENTURE GAME INCLUDED

THE AMAZING VOICE MASTER® Speech and Music Processor

Your computer can talk in your own voice.

Not a synthesizer but a true digitizer that records your natural voice quality—and in any language or accent. **SPEECH CONSTRUCTION SET** software package included for complete pitch and amplitude editing. The ultimate in a graphics based speech workstation.

And it will understand what you say. A real word recognizer for groups of 32 words. Now you can have a two way conversation with your computer!

Exciting Music Bonus lets you hum or whistle to write and perform. Notes literally scroll by as you hum! Your composition can be edited, saved, and printed out.

ESCAPE FROM PLANET X

A WILD VOICE CONTROL TEXT ADVENTURE GAME...

Escape certain death by scientific experiments! Confront exotic ocelots in alien jungles! Explore the ruins of an ancient alien city! Dig for treasure on far-off islands! Culture! Art! Disease! Asteroids! Violence! Violence in all its forms! Fun violence for kids—more serious violence for adults! Co-Exist with aliens in peace and harmony, or blast them to pieces! Kill aliens named Joe! Symbolic squids! Enjoy lounging around in a swivel chair! Die of explosive decompression! Have fun exploring Planet X! Then have fun blowing it up! *Escape from Planet X and win!*

Escape from Planet X is included with the purchase of Voice Master. Available separately for only \$19.95 (plus \$2 shipping costs). Game can be played with keyboard only.

ONLY \$89.95 C-64 and 128 (in 128 mode) includes all hardware and software.

ORDER HOTLINE: (503) 342-1271

Monday—Friday, 8 AM to 5 PM Pacific Time

Add \$4 for shipping and handling. Add an additional \$2 for 2nd day delivery. All goods shipped UPS. Master Card and VISA, money order, cashiers check or personal checks accepted (allow a 3-week shipping delay when paying by personal check). Specify computer type when ordering. 30-DAY MONEY BACK GUARANTEE. ONE YEAR WARRANTY ON HARDWARE.

Call or write for FREE product catalog.

The Automatic Proofreader

Philip I. Nelson

"The Automatic Proofreader" helps you type in program listings for the 128, 64, Plus/4, and 16 and prevents nearly every kind of typing mistake.

Type in the Proofreader *exactly* as listed. Since the program can't check itself, type carefully to avoid mistakes. Don't omit any lines, even if they contain unfamiliar commands. After finishing, save a copy or two on disk or tape before running it. This is important because the Proofreader erases the BASIC portion of itself when you run it, leaving only the machine language portion in memory.

Next, type RUN and press RETURN. After announcing which computer it's running on, the Proofreader displays the message "Proofreader Active". Now you're ready to type in a BASIC program.

Every time you finish typing a line and press RETURN, the Proofreader displays a two-letter checksum in the upper-left corner of the screen. Compare this result with the two-letter checksum printed to the left of the line in the program listing. If the letters match, it's almost certain the line was typed correctly. If the letters don't match, check for your mistake and correct the line.

The Proofreader ignores spaces not enclosed in quotes, so you can omit or add spaces between keywords and still see a matching checksum. However, since spaces inside quotes are almost always significant, the Proofreader pays attention to them. For example, 10 PRINT "THIS IS BASIC" will generate a different checksum than 10 PRINT "THIS ISBA SIC".

A common typing error is transposition—typing two successive characters in the wrong order, like PIRNT instead of PRINT or 64378 instead of 64738. The Proofreader is sensitive to the position of each character within the line and thus catches transposition errors.

The Proofreader does *not* accept keyword abbreviations (for example, ? instead of PRINT). If you prefer to use abbreviations, you can still check the line by LISTING it after typing it in, moving the cursor back to the line, and pressing RETURN. LISTING the line

substitutes the full keyword for the abbreviation and allows the Proofreader to work properly. The same technique works for rechecking programs you've already typed in.

If you're using the Proofreader on the Commodore 128, Plus/4, or 16, *do not perform any GRAPHIC commands while the Proofreader is active*. When you perform a command like GRAPHIC 1, the computer moves everything at the start of BASIC program space—including the Proofreader—to another memory area, causing the Proofreader to crash. The same thing happens if you run any program with a GRAPHIC command while the Proofreader is in memory.

Though the Proofreader doesn't interfere with other BASIC operations, it's a good idea to disable it before running another program. However, the Proofreader is purposely difficult to dislodge: It's not affected by tape or disk operations, or by pressing RUN/STOP-RESTORE. The simplest way to disable it is to turn the computer off then on. A gentler method is to SYS to the computer's built-in reset routine (SYS 65341 for the 128, 64738 for the 64, and 65526 for the Plus/4 and 16). These reset routines erase any program in memory, so be sure to save the program you're typing in before entering the SYS command.

If you own a Commodore 64, you may already have wondered whether the Proofreader works with other programming utilities like "MetaBASIC." The answer is generally yes, if you're using a 64 and activate the Proofreader after installing the other utility. For example, first load and activate MetaBASIC, then load and run the Proofreader.

When using the Proofreader with another utility, you should disable both programs before running a BASIC program. While the Proofreader seems unaffected by most utilities, there's no way to promise that it will work with any and every combination of utilities you might want to use. The more utilities activated, the more fragile the system becomes.

COMPUTE!'s Gazette Classified is a low-cost way to tell over 225,000 microcomputer owners about your product or service.

Rates: \$25 per line, minimum of four lines. Any or all of the first line set in capital letters at no charge. Add \$15 per line for boldface words, or \$50 for the entire ad set in boldface (any number of lines.) Inquire about display rates.

Terms: Prepayment is required. Check, money order, American Express, Visa, or MasterCard is accepted. Make checks payable to COMPUTE! Publications.

Form: Ads are subject to publisher's approval and must be either typed or legibly printed. One line equals 40 letters and spaces between words. Please underline words to be set in boldface.

General Information: Advertisers using post office box numbers in their ads must supply permanent address and telephone numbers. Orders will not be acknowledged. Ad will appear in next available issue after receipt.

Closing: 3rd of the third month preceding cover date (e.g., June issue closes March 3rd). Send order and remittance to: Kathleen Ingram, Classified Manager, COMPUTE!'s Gazette, P.O. Box 5406, Greensboro, NC 27403. To place an ad by phone, call Kathleen Ingram at (919) 275-9809.

Notice: COMPUTE! Publications cannot be responsible for offers or claims of advertisers, but will attempt to screen out misleading or questionable copy.

Classified Display Rates: Classified display ads measure 2 1/4" wide and are priced according to height. 1" = \$250; 1 1/2" = \$375; 2" = \$500; 3" = \$600; (\$100 for each additional inch, e.g. 4" = \$700, etc.) Preferred supplied material is Velox or PMT.

How To Type In COMPUTE!'s Gazette Programs

Each month, COMPUTE!'s Gazette publishes programs for the Commodore 128, 64, Plus/4, and 16. Each program is clearly marked by title and version. Be sure to type in the correct version for your machine. All 64 programs run on the 128 in 64 mode. Be sure to read the instructions in the corresponding article. This can save time and eliminate any questions which might arise after you begin typing.

We frequently publish two programs designed to make typing easier: The Automatic Proofreader, and MLX, designed for entering machine language programs.

When entering a BASIC program, be especially careful with DATA statements as they are extremely sensitive to errors. A mistyped number in a DATA statement can cause your machine to "lock up" (you'll have no control over the computer). If this happens, the only recourse is to turn your computer off then on, erasing what was in memory. So be sure to *save a program before you run it*. If your computer crashes, you can always reload the program and look for the error.

Special Characters

Most of the programs listed in each issue contain special control characters. To facilitate typing in any programs from the GAZETTE, use the following listing conventions.

The most common type of control characters in our listings appear as words within braces: {DOWN} means to press the cursor down key; {5 SPACES} means to press the space bar five times.

To indicate that a key should be *shifted* (hold down the SHIFT key while pressing another key), the character is underlined. For example, A means hold down the SHIFT key and press A. You may see strange characters on your screen, but that's to be expected. If you find a number followed by an underlined key enclosed in braces (for example, {8 A}), type the key as many times as indicated (in our example, enter eight SHIFTed A's).

If a key is enclosed in special brackets, [F], hold down the Commodore key (at the lower left corner of the keyboard) and press the indicated character.

Rarely, you'll see a single letter of the alphabet enclosed in braces.

This can be entered on the Commodore 64 by pressing the CTRL key while typing the letter in braces. For example, {A} means to press CTRL-A.

The Quote Mode

Although you can move the cursor around the screen with the CRSR keys, often a programmer will want to move the cursor under program control. This is seen in examples such as {LEFT}, and {HOME} in the program listings. The only way the computer can tell the difference between direct and programmed cursor control is the *quote mode*.

Once you press the quote key, you're in quote mode. This mode can be confusing if you mistype a character and cursor left to change it. You'll see a reverse video character (a graphics symbol for cursor left). In this case, you can use the DELETE key to back up and edit the line. Type another quote and you're out of quote mode. If things really get confusing, you can exit quote mode simply by pressing RETURN. Then just cursor up to the mistyped line and fix it.

IN A HUNDRED YEARS, HACKING WILL GET YOU KILLED.

NEUROMANCER™

A CYBERPUNK ROLE-PLAYING ADVENTURE

SOUND TRACK
BY
DEVO

Nowadays, hacking can get you into trouble. A hundred years from now, it can get you killed.

Actually, death isn't bad. It's better than being a "Wilson". Of course, any hacker in his right mind would rather be a Wilson than lose all his neurons.

So what have you got going for you? About 30 megs on line, several viruses, and a wise-cracking ROM construct tagging along. You're just a cowboy trying to stay a step ahead of the AI's in a world where paranoia's not an illusion, everyone IS trying to flatline you.

It's party time in Cyberspace.

- Drawn from the pages of the smash cyberpunk novel "Neuromancer" by William Gibson
- Skill-based role-playing game by the designers of "The Bard's Tale™" and "Wasteland™"
- Original Sound Track by DEVO
- Soon to be a major motion picture from Cabana Boy Productions
- Multiple paths to a successful conclusion

Now available for the Commodore 64/128, Apple IIc, IIe/128K. Coming soon for the Amiga and IBM/Tandy.
If you can't find NEUROMANCER at a local dealer you can order direct at 1-800-227-6900.
